Although it is well known that reciprocal translocations involving the X chromosome cause complete sterility in male carriers in the balanced state, effects of translocations involving the Y chromosome are not well understood. In the course of our studies on sterility in male progeny from mutagen treated male parents we found 34 translocations involving the Y chromosome, which represents about 30% of all male-sterile translocations. A mapping of Y-chromosome breakpoints in banded preparations shows the distribution to be more or less random, with a slight concentration in the middle of the chromosome.

29376 (ORNL—6021, pp 123) **High-resolution banding of mouse prometaphase-prophase chromosomes.** Cacheiro, N.L.A. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Recent technical advances in the high-resolution banding of human chromosomes from lymphocyte cultures have provided a valuable tool for increasing the accuracy in the analysis of breakpoints, and for a better definition of chromosomal rearrangements. The technique has been used in conjunction with BrdU in the study of inactivation patterns of a number of our X-autosome translocations.

29377 (ORNL—6021, pp 124-125) **Mechanism of genetic suppression.** Grell, E.H.; Jacobson, K.B. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The term, suppressor, is used to denote a mutation that reverses the effects of a mutation in a gene located elsewhere. The suppressor locus that has most intensively been examined is su(s). It suppresses vermillion, sable, speck, and purple alleles. Concentration has been on the suppression of mutations of the pr locus (purple). The pr^+ allele specfies the structure of a component of sepiapterin synthase. The enzyme catalyzes a reaction that is in the synthetic pathway of the red pteridine pigments of Drosophila eyes. The effect on eye color is an indicator of changes in the enzyme activity.

29378 (ORNL—6021, pp 144-146) **In vitro studies of cutaneous toxicity and chemical-skin interactions.** Kao, J.Y.; Hall, J.W.; Whitaker, M.J. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The objectives of this research were to develop a better understanding of the factors involved in the interaction of chemicals with the skin and subsequent toxic responses, to identify possible biochemical and functional parameters for toxicity quantitation, and to develop a quantitative basis for extrapolation from animal to man. Our experimental approach is to make use of in vitro methods utilizing mammalian skin in organ culture. Two systems for maintaining metabolically viable and structurally intact mouse skin as short term organ cultures (24 to 48 hours) are being used.

29379 (ORNL—6021, pp 169-173) **Metabolic activation and carcinogen metabolism.** Selkirk, J.K.; Tong, S.; Mansfield, B.K.; Noghrei-Nikbakht, P.A. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Studies have been designed to carefully define the metabolic differences in diverse tissues for the activation and detoxification of polycyclic carcinogens. Benzo(a)pyrene is being used as the proto-

type molecule to formulate a mechanism which describes how individual systems transform the parent chemical into a highly reactive electrophile.

29380 (DOE/CE/25082—T1) Karlson ozone sterilizer. Final report. Karlson, E. (Life Support Systems, Erie, PA (USA)). 7 May 1984. Contract FG01-82CE25082. 110p. Life Support Systems, 4634 State St., Erie, PA 16509. Order Number DE84011489.

The authors have a functional sterilization system employing ozone as a sterilization agent. This final report covers the work that led to the first medical sterilizer using ozone as the sterilizing agent. The specifications and the final design were set by hospital operating room personnel and public safety standards. Work on kill tests using bacteria, viruses and fungi determined the necessary time and concentration of ozone necessary for sterilization. These data were used in the Karlson Ozone Sterilizer to determine the length of the steps of the operating cycle and the concentration of ozone to be used. 27 references.

29381 (DOE/ER/60084—3) Development of the Osmium-191->Iridium-191m radionuclide generator. Annual report. Treves, S.; Packard, A. (Harvard Medical School, Boston, MA (USA)). May 1984. Contract AC02-82ER60084. 31p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012460.

The use of the ultrashort-lived radionuclide IR-191m (T/sub 1/2/=5s) for radionuclide angiography results in a lower patient radiation dose, higher photon flux, and allows repeated studies that are not possible with the radionuclide currently employed for these studies (Tc-99m, T/sub 1/2/=6h). The Os-191->Ir-191m generator currently being used in clinical studies suffers, however, from low Ir-191m yield (10%), high Os-191 breakthrough (5 x 10^{-3}%), and an eluent (at pH 1) that must be buffered prior to injection. Initial efforts to improve the performance of this generator met with only limited success. We have, therefore, concentrated on the development of a completely new generator system. In the last year these investigations have led to a new generator of improved Ir-191m yield (20 to 25%), dramatically lower Os-191 breakthrough (5 x 10^{-4}%), and an eluent that does not require buffering prior to injection. In addition, this generator has been found to be stable for at least 10 days and does not require a scavenger column to achieve low breakthrough. Clinical studies have continued at Children's Hospital in pediatric patients and at Beth Israel Hospital in adult patients. 19 references, 1 figure, 10 tables.

29382 (FRNC-TH—1392) Dosimetry and quality control in radiodiagnosis. Le Gouic, M. (Toulouse-3 Univ., 31 (France)). Jul 1983. 118p. (In French). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84750607.

This work deals with physics of radiodiagnosis. In a first part a study of the characteristics of different kinds of radiological equipments and a quality assurance of some of them (standard radiography, coronarography and computed tomography) have been performed. The second part deals with patient irradiation. After a bibliographic study of radiodiagnosis dosimetry, two kinds of dosimetric measures have been made: "in vitro" measures, using a phantom, that had allowed to calibrate the equipment and to improve the individual irradiation card, and "in vivo" measures. For the first types of measures ionization chambers, have been used for the second thermoluminescent dosimeters.

29383 (HRP—0904756/4) Report and recommendtions of the nuclear magnetic resonance advisory committee, Georgia Statewide Health Coordinating Council. (Georgia Health Planning and Development Agency, Atlanta (USA)). Aug 1983. 19p. NTIS, PC A02/MF A01.

Nuclear Magnetic Resonance (NMR) imaging is a new, rapidly evolving technology which is expected to dramatically influence the diagnostic capbility of Georgia's medical community over the next few years. This report is made up of two distinct components. The first component familiarizes the reader with basic concepts and issues surrounding NMR technology. The second component summarizes the activity and recommendations of the Statewide Health Coordinating Council's Nuclear Magnetic Resonance Advisory Committee.

29384 (INIS-mf—8376) Radiotherapy of tumors of the salivary glands. Tressel, W. (Muenchen Univ. (Germany, F.R.)). 24 Apr 1979. 91p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780198.

85% of 91 irradiated tumors were malign, 12% were pleomorphic adenomas and 3% were benign. 70% were primary tumors, 30% were relapses. Two thirds of all tumors were carcinomas. More than the half of the local irradiations were performed with cobalt 60, one third with accelerator, and the remaining ones with conventional or ultrahard X-rays. Focal dosages were 4000 to 6000 rd in 4 to 7 weeks. In the pleomorphic adenomas a high relapse rate was observed (3/11). These tumors should postoperatively receive a focal dosage of 5000 rd over a period of 5 to 6 weeks. 29 of the 43 postoperatively X-irradiated malign primary tumors reached the two-year-limit. In 10% advanced relapses occurred. If a tumor is removed of a healthy body, 5000 rd over 5 weeks will suffice as postoperative X-irradiation. When signs of particular malignity are apparent, the dosage is to be increased. The weekly dosage should range between 800 and 1000 rd. The results of primary irradiation were very bad. For inoperable tumors more than 6000 rd focal dosage will probably be required. In all cases of malign tumors the ipsilateral side of the neck should be irradiated as prophylactic measure, even if palpation does not indicate any suspectable lymphatic nodes. For this 5000 rd focal dosage should suffice. In 56% of all patients metastases were found. The survival rate of 5 years was 56% in pleomorphic adenomas, in carcinomas in total 24%, in adenoid cystic carcinomas alone 67%. Relapses show a significantly worse prognosis than primary tumours. For the postoperatively irradiated primary tumors the survival rate of 5 years was 48%, for the exclusively irradiated relapses only 17%. (orig./MG).

29385 (INIS-mf—8377) Results of 1,886 choledochal surgeries under particular consideration of intraoperative routine cholangiography with contrast media providing different degrees of density. Koch, M. (Duesseldorf Univ. (Germany, F.R.). Medizinische Fakultaet). 1979. 75p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780194.

The results are demonstrated of intraoperative routine cholangiography with radiographic contrast media with different degrees of density which are illustrated by 1,886 medical records of biliary tract surgery performed between 1968 and 1977. Choledochotomy was realized in 16.6%, transcystical cholangiograms were made in 40.5% of the cases. Safety choledochotomy was applied in only 22.4%, in spite of low radiographic rates. With the false positive probe cholangiograms conray resulted to be superior to biligrafin. None of the individual conray concentrations resulted to be the best with regard to false positive misinterpretations. Clinically unsuspected concrements were detected with conray 15 in the most cases (3,6%). With the false negative probe cholangiograms conray 15 resulted to be superior. The same ratios resulted for relapse therapy. For choledochotomy conray 15 was applied in vain in only 33.3% of all cases of intraoperative T-draining radiography, the other contrast media in 50%. Summarizing it can be said that the best results were obtained with conray 15. Moreover, the findings of secondary surgery are described, the more rarely occurring outflow obstructions due to concrements are depicted and the intraoperative concrement sites are indicated. Finally, the postoperative treatment of choledochotomies, the amount of postoperative complications is indicated and the mortality rates for every kind of surgery and the individual age groups are given. (orig./MG).

29386 (INIS-mf—8380) Results of scintigraphic goiter diagnostics of 1975 and 1976. Holtz-Zettler, F. (Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 51p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780195.

In 2,790 scintiscans of the thyroid gland the distribution of cold, cool, warm and hot nodules and of diffuse goiters was assessed. In 276 scintiscanned patients who underwent operation, classification based on the following criteria: nodule type, palpation, malignancy rate, histology, age and sex. In addition, the occurrence of hyper- and hypothyreosis was investigated. For cold nodules the malignancy rate was 13.7%, for cool nodules 7.7%, for warm nodules 2.7%, and for diffuse goiters 7%; hot nodules didn't show malignant growth. In 9% of all operated preparations malignant degenerations were found; the removed nodular goiters comprised 9.3%. Among all nodules the incidence was 2.2%; 4.6% of all cold nodules were malign. In 20% of all patients with cancer metastases were found; their most frequent localisations were the regional lymphatic nodes. Histologically papillary and follicular carcinomas resulted to be the most frequent carcinomas (36% each); the incidence of anaplastic carcinomas was 20%. Medullary carcinoma and sarcoma were diagnosed once each. In females benign nodules occured more than four times, diffuse goiters and cold malignomas almost three times as much as in males. In both sexes the most benign modules were found between the 50th and 70th year of life, and particularly in the 7th decade of life. Toxic adenomas occurred particularly in women up to 35 years and at the beginning of the 8th decade of life. (orig.).

29387 **(INIS-mf—8382) Scintigraphy of the interior of the heart. Studies on the calculation of ejection fractions from first passage and equilibrium studies.** Bluhm-Kudlacek, G. (Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet). 1981. 81p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780196.

A technique of nuclear medical heart diagnosis developed at the department of Nuclear Medicine of the University of Tuebingen (Prof. Dr. Feine) was further developed in this work and examined with respect to uncertainty factors. The main interest was the ejection-fraction of the left ventricle as an important parameter of heart action. After the evaluation of 21 cases, all possible sources of errors in the calculation of the ejection fraction form the first passage of activity were examined systematically. The results of the test program were checked in a second evaluation of the case studies. As a result a concept is proposed that should yield reliable and compatible values in future investigations: the demarcation of the region of interest of the left ventricle (ROI) by means of a representative cycle or by accepting a ROI that was identified by a special computer program out of the equilibrium study, the left boundary of the correction area for background correction in the maximum of the background activity time-activity characteristic, a two-fold smoothing of left ventricular and background time-activity characteristic, the use of all cycles for the calculation of the ejection fraction, that are equal or equal to 80% of a maximum particular value. In addition a computer program was introduced for automatic compartment demarcation in equilibrium studies; the results were compared with conventional evaluations. The evaluation with automatic compartment limitation proved to be a simple, relatively user-independent technique for the determination of the ejection fraction on the basis of equilibrium studies. (orig.).

29388 **(INIS-mf—8388) Nuclear-medical method applied for determining the choledochus diameter after cholecystectomy.** Wolf, M. (Tuebingen Univ. (Germany, F.R.). Medizinische Fakultaet). 1980. 31p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780197.

54 patients (46 of them females, 8 males) who underwent cholecystectomy were followed up roentgenologically by infusion cholangiography and nuclear-medicinally by quantitative hepatobiliary functional scintiscanning (HBFS). The ROI method applied for HBFS permits to record time/activity curves above the liver parenchyma (A) and the porta of the liver (B). By substracting curve A of curve B with the scale in which A is incorporated in B, a curve B' results, indicating the flow volume through the porta of the liver. The quotient Q=maximum pulse A to B/maximum pulse B to B indicates the portion of the liver parenchyma in the porta curve. The quotient represents a measure for the total volume of the large bile ducts included in the region of the porta of the liver. The quantity 1-Q/Q was put in relation with the roentgenologically determined common bile duct diameters. It resulted that both quantities correlated well, with a correlation coefficient of r=-0.860. Thus, the choledochus diameter can be determined in a primarily functional examination with a precision of 2 mm, a degree which permits the detection of clinically relevant discharge malfunctions. It was not possible to detect peristalsis-dependent phenomena with a dosage of 4-5 mCi 99 mTc-diethyl-IDA, an irradiation dose which was sufficient for answering the clinical questions and could be justified for the patients. (orig.).

29389 **(INIS-mf—8397) Spinocellular carcinoma of the lip, effects of radiotherapy. 109 case studies of the Dept. of Radiology of the Dermatological Clinic of Univ. Muenchen.** Hess, U. (Muenchen Univ. (Germany, F.R.). Fachbereich Medizin). 12 Jun 1979. 222p. (In German). NTIS (US Sales Only), PC A10/MF A01. Order Number DE84780199.

109 cases of spinocellular carcinoma of the lip were studied with a view to sex dependence, occupation, family disposition and colour of the skin, eyes and hair. Etiology, clinical aspects and course of lip carcinoma were studied. The results obtained with radiotherapy (X-ray therapy) are described and discussed. (APR).

29390 **(INIS-mf—8705) Universal multiprocessor system for the fast acquisition and processing of positron camera data.** Deluigi, B. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1982. 141p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780217.

In this study the main components of a suitable detection system were worked out, and their properties were examined. For the measurement of the three-dimensional distribution of radiopharmaka marked by positron emitters in animal-experimental studies first a positron camera was constructed. For the detection of the annihilation quanta serve two opposite lying position-sensitive gamma detectors which are derived in coincidence. Two commercial camera heads working according to the Anger principle were reconstructed for these purposes and switched together by a special interface to the positron camera. By this arrangement a spatial resolution of 0.8 cm FWHM for a line source in the symmetry plane and a coincidence resolution time 2T of 16ns FW0.1M was reached. For the three-dimensional image reconstruction with the data of a positron camera a maximum-likelihood procedure was developed and tested by a Monte Carlo procedure. In view of this application an at most flexible multi-microprocessor system was developed. A high computing capacity is reached owing to the fact that several partial problems are distributed to different processors and are processed parallely. The architecture was so scheduled that the system possesses a high error tolerance and that the computing capacity can be extended without a principal limit.

29392 **(ORNL/TM—9037) Nuclear medicine progress report for quarter ending December 31, 1983.** Knapp, F.F. Jr.; Ambrose, K.R.; Butler, T.A.; Goodman, M.M.; Srivastava, P.C. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 23p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012037.

In this report a multi-step synthesis of 19-iodo-3-(R,S)-methyl-18-nonadecenoic acid is described. In this new agent, the iodine is stabilized as a trans vinyliodide and the methyl group in position-3 was introduced to inhibit β-oxidation. The ^{125}I-labeled agent was evaluated in unfasted rats and showed essentially no loss from the myocardium over the initial 30 min period. Three new [^{125}I]-labeled iodopentenyl-substituted cation analogues have also been prepared and evaluated in rats to determine the relation between structure and relative heart and hepatobiliary uptake. The

triphenylarsonium and dihexylphenylphosphonium analogues showed tissue distribution properties very similar to the parent -triphenylphosphonium agent. The -dimethyl-n-octylphosphonium analogue, however, showed lower heart uptake and much greater hepatobiliary clearance. Carrier-free ^{103} ^{106}$RuCl_3$ by utilizing ruthenocenylmethyltrimethylammonium iodide as the key synthetic intermediate. The amino acid analog was evaluated as a pancreatic imaging agent but no selective uptake in the pancreas was observed. The High Flux Isotope Reactor (HFIR) resumed operation in January after replacement of the beryllium reflector shield. For the July-December 1983 period, several shipments of radiolabeled agents were made to Medical Cooperative investigators. 9 references, 3 figures, 4 tables.

29393 **(PB—84-154855) Study to determine the feasibility of computer diagnosis of the pneumoconioses. Final report.** Kruger, R.P. (University of Southern California, Los Angeles (USA). Electronic Sciences Div.). 1972. 90p. (USCEE—433). NTIS, PC A05/MF A01.

A study was undertaken to determine the feasibility for the possible automated mass diagnostic screening of pneumoconiosis radiographs. Two distinct textural feature extraction methods involving digital and coherent optical approaches were undertaken. The performance of the two automated diagnostic systems is described in detail in tables presented in the main body of this report. Analagous results are presented for diagnosis obtained from experienced radiologists asked to analyze the same films given to the automated systems.

29394 **(PB—84-155084) Chest x-ray analysis by computer. Final report.** (National Biomedical Research Foundation, Washington, DC (USA)). 15 Sep 1972. 12p. NTIS, PC A02/MF A01.

See also PB84-155092.

This report describes a study program which was concerned with the investigation of chest x-rays containing various classifications of pneumoconiosis. Samples of x-rays were digitized using a programmable light source (a computer-controlled CRT scanner). The digitized data were then processes in various ways and subsequently applied to the CRT scanner system to generate photographic images. The purpose of the transformations was to (1) determine the basic characteristics of typical chest x-rays with regard to resolution and gray scale content, (2) present the data in a manner which accentuates or facilitates the classification of pneumoconiosis, (3) determine the necessary hardware and specify its operating characteristics for ultimate use as a computer input system (digitization system). The results of these investigations are included in this report, along with the images recorded during this study.

29395 **(PB—84-155092) Chest x-ray analysis by computer: final technical report.** (National Biomedical Research Foundation, Washington, DC (USA)). 1972. 122p. NTIS, PC A06/MF A01.

See also PB84-155084.

The purpose of this study was to evaluate and demonstrate the feasibility of the automated analysis of chest x-rays for the classification of pneumoconiosis films according to the U.I.C.C./Cincinnati standard films. Toward this end, computer programs simulating the proposed systems were prepared. Using these programs, the authors then examined three sets of chest radiographs to determine the extent of pneumoconiosis present. The results of the examinations of these x-rays clearly indicated the feasibility of the proposed system. Based on the outcome of these examinations, a complete set of hardware and software specifications were established for a system which can be used for the large scale automatic analysis of chest x-rays.

29396 **Evaluation of synchrotron x-rays for digital subtraction coronary angiography.** Otis, J.N.; Campbell Finman, L.; Hofstadter, R.; Hudson, A.; Hughes, E.B.; Rolfe, J.; Rubenstein, E.; Zeman, H.D. (Hansen Laboratories of Physics and Dept. of Physics, Stanford Univ., Stanford, CA 94305). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 581-584(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

The intensity and tunability of synchrotron X-ray beams are highly suited to the non-invasive detection of iodine by K-edge digital subtraction angiography. An imaging system developed for in vivo canine studies is described. Considerations relating to an expanded system for human subject studies are discussed.

29397 **In vivo comparison of 16α-[^{77}Br]bromoestradiol-17β and 16α-[^{125}I]Iodoestradiol-17β.** McElvany, K.D.; Carlson, K.E.; Welch, M.J.; Senderoff, S.G.; Katzenellenbogen, J.A. (Washington Univ. School of Medicine, St. Louis, MO). *Journal of Nuclear Medicine;* **23**: No. 5, 420-424(May 1982). Contract AC02-81EV10650.

An in vivo comparison of two estrogen-receptor-binding radiopharmaceuticals of high specific activity, 16α-[^{77}Br]bromoestradiol-17β and 16α-[^{125}I]iodoestradiol-17β, has been carried out in immature female rats. The iodoestradiol has slightly higher uterine uptake at 1 hr after injection, whereas the brominated analog has significantly enhanced uptake at later times. The similar behavior of the two compounds in vivo suggests that estradiol labeled with I-123, Br-77, or Br-75 could be used interchangeably for the imaging of breast tumors containing estrogen receptors. In addition, coinjection of 16α-[^{125}I]iodoestradiol as an internal standard has been shown to be useful for comparison of different radiohalogenated estrogens. 17 references, 4 tables, 1 figure.

29398 **Localization and therapeutic potential of tritiated tetracycline in rodent tumors.** Davis, R.C.; Wood, P.; Mendelsohn, M.L. (Lawrence Livermore Lab., CA). *Cancer Research;* **37**: 4539-4545(Dec 1977). Contract W-7405-ENG-48.

The reputed localization of tetracycline in human and animal tumors suggested that chemically stable, high-specific-activity tritiated tetracycline (TTC) might have antineoplastic therapeutic potential. Direct therapeutic effects were tested in two transplanted tumor lines in rats, and the localizing properties of TTC were measured in 30 transplanted tumor lines in rats and mice and in 23 spontaneous mammary tumors in rats. The therapeutic studies demonstrated that, while a significant reduction in the growth rates of transplanted tumors could be obtained through the administration of heavy doses of TTC, similar reductions were observed in the growth rates of tumors in animals receiving unlabeled tetracycline. In the localization studies the concentrations of TTC in normal tissues and tumors were compared and correlated with corresponding concentrations of [^{14}C]-thymidine, a measure of proliferative activity. Significantly greater binding of TTC over normal tissue occurred only in areas that failed to incorporate [^{14}C]thymidine. Rapidly proliferating areas of tumors, as measured by [^{14}C]thymidine incorporation, bound tetracycline in concentrations similar to muscle and significantly lower than kidney. The lack of localization in viable tumor and the absence of a tritium effect in treated tumors argues strongly against the therapeutic value of TTC at least to the extent that the results on this broad spectrum of tumors can be generalized.

29399 (ANL—83-100-Pt.2, pp 70-76) **Growth inhibitor of E. coli K-12 in a sample of ^{39}KCl.** Luckey, T.D. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

Growth rates and total population of E. coli were reduced fourfold when natural KCl (/sup N/KCl) in the medium was replaced by ^{39}KCl from a particular source. A prolonged lag period was noted in cultures containing either /sup N/KCl or ^{39}KCl when inoculated with bacteria adapted to ^{39}KCl. These changes were not due to endogenous radiation because these differences were not observed when (a) the KCl concentrations were reduced from 50 to 5 mM and (b) the ^{39}KCl from the prime source was replaced with ^{39}KCl from a second source; also the addition of ^{40}KCl to ^{39}KCl

did not improve growth. These results suggest that the ^{39}KCl from the primary source contained an unidentified inhibitor that is not readily detected by physical and chemical analyses. 8 references, 3 figures, 2 tables.

29400 (NP—4770275) **Reactional studies on the formation of protein from cellulose waste.** Hecht, V. (Hannover Univ. (Germany, F.R.). Fakultaet fuer Mathematik und Naturwissenschaften). 17 Feb 1982. 95p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84770275.

Portions are illegible in microfiche products.

The aim of these studies was to work out a design of reactors for converting cellulose to protein-containing animal feed. The microorganism Chaetomium cellulolytikum (ATCC 32319) was used for this purpose. The growth behaviour of this microorganism was studied in a 20 l batch reactor on the substrates glucose, avicel (pure crystalline cellulose) and presteam-treated and ammonia-treated straw. The influence of the operating parameter, stirrer rotation rate, on growth behaviour was also studied on avicel-cellulose. Here it was shown that productivity could be increased by reducing rotation speed and increasing the substrate concentration. The growth parameters established from these studies will be used in setting up a kinetic model and in the design of a reactor.

29401 (ORNL—6021, pp 81-83) **Microbial mutagenesis and cell division.** Adler, H.I.; Crow, W.D.;; Machanoff, R.; Sozer, A. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

New methods for cultivating anaerobic bacteria were developed on the use of a sterile membrane fraction from Escherichia coli. The fraction efficiently reduces oxygen to water over a broad range of temperature and pH in both liquid and solid media. Twenty anaerobes representing ten genera have been grown in liquid media containing the membrane fraction. If bacteria and the fraction are incorporated into pour plates overlayed with a thin layer of agar, colonies develop without the use of anaerobic containers.

29402 **Adaptation of the cyanobacterium Microcystis aeruginosa to light intensity.** Raps, S.; Wyman, K.; Siegelman, H.W.; Falkowski, P.G. (Brookhaven National Lab., Upton, NY). *Plant Physiology;* 72: 829-832(1983). Contract AC02-76CH00016.

Light intensity adaptation (20 to 565 microeinsteins per square meter per second) of Microcystis aeruginosa (UV-027) was examined in turbidostat culture. Chlorophyll a and phycocyanin concentrations decreased with increasing light intensity while carotenoid, cellular carbon, and nitrogen contents did not vary. Variation in the number but not the size of photosynthetic units per cell, based on chlorophyll a/P_{700} ratios, occurred on light intensity adaptation. Changes in the numbers of photosynthetic units partially dampened the effects of changes in light intensity on growth rates.

29403 (ORNL—6021, pp 127-129) **Analysis of spontaneous early embryonic lethality in mice.** Larsen, M.M.; Generoso, W.M. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

From controls of dominant-lethal experiments conducted in the laboratory over many years, it is clear that the normal incidence of deciduomata in uteri of pregnant females varies considerably with the strain of the female. The objective of the embryo-transfer study was to compare the incidence of deciduomata when normal-appearing 2- to 8-cell embryos are transferred from females of each of the two strains to females of either the same or the other strain. We found a higher incidence of deciduomata (1.5 to 2) when the donor strain was the T-stock regardless of the strain of recipient.

29404 (ORNL—6021, pp 129-130) **Establishment of an embryo-freezing program for the preservation of genetic stocks.** Russell, L.B.; Larsen, M.M. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

During the past year, the embryo freezing laboratory has been fully operative, equipment and original technique problems have been solved. For each stock, freezing-success trials are performed in which a sample of frozen embryos is thawed, implanted into pseudopregnant host females, and raised to birth. A stock is not discarded unless the trial is successful.

29405 (ORNL—6021, pp 159-163) **Regulation of gene expression.** Kenney, F.T.; Lee, K.L.; Isham, K.R.; Holloway, G.R.; Stringfellow, L.A.; Balogh, L.A.; Johnson, A.C.; Rothrock, R.S.; Tindal, M.H. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

In order to define in molecular terms the mechanisms controlling expression of specific genes in mammalian cells, how gene expression is activated, how tissue-specific expression is effected, how expression is modulated by hormones and other specific effectors, and how genetic control mechanisms are altered in the dysfunction of gene expression in cells transformed to malignancy were studied. Much of this work has focused on expression of the rat liver enzyme tyrosine aminotransferase.

29406 **(AD-A—137010/5) Cryomicrotome applications: techniques for the study of skeletal materials. Technical report.** Smith, K.C.; Oloff, C.M.; Kazarian, L.E. (Aerospace Medical Research Lab. (6570th), Wright-Patterson AFB, OH (USA)). Sep 1983. 20p. NTIS, PC A02/MF A01.

The LKB 2250 PMV Cryomicrotome is a large sledge-type microtome designed for sectioning both undecalcified bone and specimens of large size. The maximum specimen size is 150 x 450 mm, sufficient for an entire rabbit or small monkey.

29407 **(INIS-mf—8383) Quantitative autoradiography of ^{14}C-D-glucose metabolism of normal and traumatized rat brain using micro-absorption photometry.** Bonorden, S. (Giessen Univ. (Germany, F.R.). Fachbereich Humanmedizin). 1980. 200p. (In German). NTIS (US Sales Only), PC A09/MF A01. Order Number DE84780189.

It could be shown using ^{14}C-glucose as energy-providing substrate for brain tissue metabolism that for bolus type application a retarded and even channelling of the substrate into the metabolic process takes place. The presence of tracer in the tissue was established using autoradiography. A linear correlation between the amount of tissue-incorporated ^{14}C section thickness and exposure time could be established by means of densitometric measurement of brain sections of various thicknesses, by applying various ^{14}C-activities and by different exposure times. From these correlations direct conclusions may be made regarding the specific activity of the tissue provided that exposure time and section thickness of the sample are known. Comparative studies between cortex and deeper structures and between traumatized and non-traumatized brain tissue show that the rate of metabolism in brain cortex is markedly higher than in underlying structures and that ^{14}C-incorporation is higher in traumatized tissue than in non-traumatized tissue. Whilst the difference in rate of metabolism between brain cortex and deep structures can be clearly related to the differing cell count/unit surface area for cortex and the deeper structures, the different energy conversion rates for functionally damaged and normal brain tissue is a specific characteristic of injury. Apart from the fact that an increased ^{14}C-deposition is in no way indicative of an increased metabolic activity, the possibility of quantifying ^{14}C-tissue content provides a basis for estimating therapeutic effects e.g. in the treatment of trauma-caused brain edema. (orig.).

29408 **(LA-UR—84-1245) Kinetics of red blood cell aggregation: an example of geometric polymerization.** Perelson, A.S.; Samsel, R.W. (Los Alamos National Lab., NM (USA); Brown Univ., Providence, RI (USA). Div. of Biology and Medicine). 2 Apr 1984. Contract W-7405-ENG-36. 9p. (CONF-8404141—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011370.

From International topical conference on kinetics of aggregation and gelation; Atlanta, GA, USA (2 Apr 1984).

Portions are illegible in microfiche products.

The kinetics of the process by which red blood cells aggregate into long cylindrical, and sometimes branched, structures called rouleaux is studied within the framework of both reversible and irreversible addition and condensation polymerization reactions. However, unlike usual polymer kinetics, here we take into account the geometry of the subunits and the geometry of the growing structure. Geometric factors such as the amount of reactive wall area influence the probability of branching and hence the final shape of the aggregate. The inclusion of loop formation reactions is shown to be crucial in obtaining physically realistic equilibrium solutions of the kinetic equations. 11 references, 3 figures.

29409 (ORNL—6021, pp 163-167) **Tumor cell surface proteins.** Kennel, S.J.; Braslawsky, G.R.; Flynn, K.; Foote, L.J.; Hotchkiss, J.A.; Huang, A.H.L.; Lankford, P.K. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

A tumor surface protein of 180,000 M/sub r/ (TSP-180) has been identified on cells of several lung carcinomas of BALB/c mice. TSP-180 was not detected on normal lung tissue, embryonic tissue, or other epithelial or sarcoma tumors, but it was found on lung carcinomas of other strains of mice. Considerable amino acid sequence homology exists among TSP-180s from several cell sources, indicating that TSP-180 synthesis is directed by normal cellular genes although it is not expressed in normal cells. The regulation of synthesis of TSP-180 and its relationship to normal cell surface proteins are being studied.

29410 **Monoclonal antibodies in cancer detection and therapy.** Kennel, S.J.; Flynn, K.; Foote, L.; Lankford, T. (Oak Ridge National Lab., TN). *BioScience;* **34**: No. 3, 150-156(Mar 1984). Contract W-7405-ENG-26.

The advent of monoclonal antibodies has revolutionized thinking about cancer therapy management. In this article, the authors review some of the applications of monoclonal antibodies in cancer research and identify requirements for monoclonal antibody to be useful in cancer detection or therapy. Empirical tests of antibody circulation in vivo are necessary to establish specificity. 68 references, 3 figures.

29411 **Adult-onset nemaline rods in a patient treated for suspected dermatomyositis: study with two-dimensional electrophoresis.** Danon, M.J.; Giometti, C.S.; Manaligod, J.R.; Perurena, O.H.; Skosey, J.L. (Univ. of Illinois, Chicago). *Archives of Neurology;* **38**: 761-766(Dec 1981). Contract W-31-109-ENG-38.

A 65-year-old woman with progressive muscle weakness and a diffuse rash of three years' duration was examined. Muscle tissue was studied with histochemical techniques, phase-contrast microscopy, electron microscopy, and two-dimensional electrophoresis. Histochemical studies showed numerous nemaline rods, with a normal ratio of types I and II fibers. Two-dimensional electrophoresis revealed abnormalities in the myosin light chain and tropomyosin protein patterns when compared with normal and diseased muscle biopsy samples, including those from two patients with adult-onset dermatomyositis.

Portions are illegible in microfiche products.

This report summarizes a series of studies on the suitability of silicone surgical grafts. The studies performed include an evaluation of vena cava rings to study thrombogenicity of grafted polymer coatings, the interaction of platelets with radiation grafted polymers, an in vitro evaluation of knitted dacron artery sections, the tissue compatibility of HEMA-EMA copolymers, the in vitro cell adhesion to polymeric materials, and the use of the ESCA technique for determining HEMA/EMA ratios.

29413 **Effect of food acclimation on assimilation efficiency of Calanus pacificus.** Landry, M.R.; Hassett, R.P.; Fagerness, V.; Downs, J.; Lorenzen, C.J. (Univ. of Washington, Seattle). *Limnology and Oceanography;* **29**: No. 2, 361-364(Mar 1984). Contract AT06-76EV75026.

A technique, based on quantitative conversion of chlorophyll a to pheophorbide during digestion, is described for determination of assimilation efficiencies of particle-feeding zooplankton. Calanus pacificus had assimilation efficiencies ranging from 68.5 to 85.4% for carbon and 73.9 to 92.5% for nitrogen. Assimilation efficiencies for copepods first acclimated to different food concentrations of Thalassiosira weissflogii and then fed at the same food level varied systematically, with animals acclimated to low food having higher efficiencies than animals acclimated to high food.

29414 **Narrow-spectrum chemoreceptor cells in the walking legs of the lobster Homarus americanus: taste specialists.** Derby, C.D.; Atema, J. (Marine Biological Lab., Woods Hole, MA). *Journal of Comparative Physiology;* **146**: 181-189(1982). Contract AC02-76EV02546.

The chemoreceptors in the legs of lobsters function in the localization and handling of food. By single-unit extracellular recording techniques, the specificity of single primary chemoreceptor cells is described here in detail. In contrast to what is known in vertebrates, narrow-spectrum chemoreceptors of several different types were found, each type responding with maximal sensitivity to only one of the following compounds: L-glutamate, L-glutamine, L-arginine, taurine, betaine, and ammonium chloride. Ammonium chloride sensitive cells were also highly specific. Other groups of narrow-spectrum cells - L-arginine, L-glutamine, taurine, and betaine sensitive chemoreceptors - showed equally strong specificity. These results indicate that the peripheral coding system in the legs of lobsters is based largely but perhaps not exclusively on narrow-spectrum chemoreceptor cells.

29415 **Chemosensitivity of walking legs of the lobster Homarus americanus: neurophysiological response spectrum and thresholds.** Derby, C.D.; Atema, J. (Marine Biological Lab., Woods Hole, MA). *Journal of Experimental Biology;* **98**: 303-315(1982). Contract AC02-76EV02546.

Responses of chemoreceptors in the walking legs of the lobster Homarus americanus to 35 individual compounds and 3 mixtures (prey odours and extracts) were studied using extracellular recording techniques. Compared against a standard mussel (Mytilus edulis) extract, these receptors were most sensitive to the amino acids L-glutamate, hydroxy-L-proline, L-aspartate, L-arginine, glycine, taurine, and L-alanine, as well as such other compounds as ammonium chloride, betaine, and the tripeptide glutathione. Most of these excitants are among those compounds most prevalent in the prey of lobsters.

29416 (UCRL—15591) Malignant melanoma in the Kaiser Foundation health plan of northern California: a comparison of incidence and measures of health care utilization between the Lawrence Livermore National Laboratory and surrounding health plan groups. Hiatt, R.A.; Fireman, B. (Kaiser Foundation Research Inst., Oakland, CA (USA). Dept. of Medical Methods Research). Feb 1984. Contract W-7405-ENG-48. 44p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011050.

Portions are illegible in microfiche products.

We investigated the hypothesis that the increased incidence of malignant melanoma at Lawrence Livermore National Laboratory (LLNL) was due to a difference in the medical care received by LLNL employees compared to nonLLNL residents of the same geographic area. Utilizing records of the Kaiser Foundation Health Plan (KFHP) to which about half of the LLNL employees belong, we confirmed that the incidence of melanoma at LLNL was about three times that in the surrounding community (62.4/100,000 vs 20.9/100,000 in the members served by the Walnut Creek KFHP facility, $p = 0.040$. Furthermore, rates of biopsy for junctional, compound and dermal nevi were also higher among LLNL employees than the Walnut Creek membership. The melanoma rate among LLNL spouses was close to that of the employees themselves, but was based on only six cases. Rates among employees of the University of California at Davis, a group likely to be similar to LLNL employees in academic background and sun exposure, were not elevated compared to overall KFHP rates. In a comparison between LLNL employees without melanoma and comparable controls in the Walnut Creek membership, there was no clear difference in the number of visits for skin problems. However, LLNL employees had substantially more skin biopsies than the controls. After 1976 when the excess of melanoma at LLNL first received publicity, the difference in the mean number of biopsies was significantly greater ($p = 0.048$). We conclude that the sustained increase in melanoma incidence at LLNL is associated with an increased likelihood of being biopsied for pigmented skin lesions. This association may be because physicians caring for LLNL employees are more concerned about the potential malignancy of pigmented lesions.

29417 (TVA/ONRED/AWR—84/8) Evaluation of liquid oxygen to increase channel catfish production in heated water raceways. Collins, C.M.; Burton, G.L.; Schweinforth, R.L. (Tennessee Valley Authority, Knoxville (USA). Div. of Air and Water Resources). Mar 1984. 23p. NTIS, PC A02/MF A01. Order Number DE84901134.

Liquid oxygen (LOX) was used to maintain dissolved oxygen (DO) levels in the highest of two stocking densities to evaluate its economic feasibility and impact on production. Six 17.4 m^3 (614 ft^3) concrete raceways were stocked with 15 to 18 cm (6 to 7 in.) channel catfish at 141 and 282 fish/m^3 (4 and 8 fish/ft^3). LOX was used when fish biomass reached 48 kg/m^3 (3 lb/ft^3). Gross production, average weight and survival were significantly enhanced in the LOX raceways. Food conversion was similar in all raceways for the 154-day study. LOX increased production cost $0.03/lb of fish, but production in LOX raceways averaged 307 percent greater than in raceways without LOX. The use of LOX would reduce capital outlay for construction of an aquaculture facility. 5 references, 4 figures, 5 tables.

29418 (ANL—83-100-Pt.2) Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983. (Argonne National Lab., IL (USA)). Mar 1984. Contract W-31-109-ENG-38. 180p. NTIS, PC A09/MF A01; GPO Dep. Order Number DE84008870.

This is the fourteenth Annual Report of the Center for Human Radiobiology. New cases of bone cancer and carcinoma of head sinuses are occurring at a rate of about one per year in patients who acquired radium burdens 50 to 60 years ago. Several papers deal with dosimetry of alpha-emitting radionuclides in man, in animals, or in the environment. The report concludes with an appendix containing data on the exposure of 2312 persons whose radium content has been determined and an appendix listing the classical radium-related malignancies (osteosarcomas and carcinomas of the paranasal sinuses and mastoid).

29419 (ANL—83-100-Pt.2, pp 1-3) Recent cases of radium-induced malignancy. Adams, E.E. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

Three cases of malignant disease attributed to radium in patients with measured body burdens have been observed since 1978 - one paranasal sinus carcinoma, one mastoid carcinoma, and one fibrosarcoma of bone. These cases are summarized here. 4 references.

29420 (ANL—83-100-Pt.2, pp 4) Age and dose as determinants of times of appearance of radium-induced osteosarcomas in humans. Stebbings, J.H.; Lucas, H.F. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

Determinants of time-until-tumor for bone sarcomas in US radium cases have been reevaluated. For the 57 measured female bone sarcoma cases exposed to ^{226}Ra and/or ^{228}Ra, ages at appearance of tumor are more strongly correlated with radium intake doses than are latency periods.

29421 (ANL—83-100-Pt.2, pp 5) Multiple myeloma, leukemia, and breast cancer among the US radium dial workers. Stebbings, J.H.; Lucas, H.F.; Stehney, A.F. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

The relationships of radium exposure to mortality from multiple myeloma, leukemia, and breast cancer were studied in three cohorts of female dial workers defined by year of first employment. A three-fold excess risk of multiple myeloma occurred in the pre-1930 cohort; however, analyses of body burdens and durations of employment suggest that external radiation was more likely to have been responsible than was internal radium. Leukemia incidence and mortality have not been elevated overall among the female dial workers, either in the pre-1930 or the post-1930 cohorts, but cases have tended to occur early and in subjects with higher body burdens of radium. Extensive analyses of breast cancer data have uncovered several observations weighing against a causal interpretation of the association between radium body burdens and breast cancer.

29422 (ANL—83-100-Pt.2, pp 6) Risks of cancers of selected sites among female radium dial workers. Stebbings, J.H.; Lucas, H.F.; Stehney, A.F. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

The 1285 identified, located radium dial painters employed before 1930 have now experienced significant mortality from cancers of sites other than those (bone and head) known to be radium induced. We analyze the relationships of radium exposure to fatal cancers of common soft-tissue sites: stomach, colon, rectum, liver, pancreas, lung, breast, cervix, and corpus uteri. Incident multiple myeloma, leukemia, and breast cancer were also studied.

29423 (ANL—83-100-Pt.2, pp 7-13) **Non-stochastic effects of ^{226}Ra and ^{228}Ra in the human skeleton.** Keane, A.T.; Kirsh, I.E.; Lucas, H.F.; Schlenker, R.A.; Stehney, A.F. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

Non-cancerous skeletal lesions are observed radiographically in humans carrying internal deposits of ^{226}Ra and ^{228}Ra and in beagles following injection of ^{226}Ra, ^{228}Ra, or ^{239}Pu. These radiographic changes are therefore particularly relevant to the assessment of the health effects of intakes of plutonium and other bone-seeking radionuclides released to the environment by the nuclear industry and by fossil-fuel and nuclear power plants. In this paper, results are reported of a comparative evaluation of the non-malignant changes that have been observed radiographically in the bones of two groups of former radium dial workers, all female - one group exposed predominantly to ^{226}Ra and the other predominantly to ^{228}Ra.

29424 (ANL—83-100-Pt.2, pp 14) **Morphology of cells malignantly transformed by alpha particle irradiation.** Lloyd, E.L.; Henning, C.B. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

In experiments where mouse embryo cells were irradiated with a parallel beam of 5.6 MeV alpha particles from a Tandem Van de Graaff machine, we noted that about 10 to 20 alpha particles through each nucleus were required to kill 2/3 of the cells. Earlier workers failed to make measurements of nuclear areas of the cells as they were irradiated.

29425 (ANL—83-100-Pt.2, pp 15-20) **Unusual case of radium exposure.** Toohey, R.E.; Sha, J.Y.; Urnezis, P.W.; Hwang, E.Y. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

We have determined the body content, distribution, retention, and excretion rate of ^{226}Ra for a uranium mill worker who inhaled ^{226}Ra in an unknown form. Radium was retained in the lung with a biological half-life of 120 days, an the amount initially inhaled was estimated to be 180 +- 30 Bq. These values, combined with an observed radon retention factor of 71%, implied a 50-year dose commitment of 0.16 +- 0.04 Sv to the lung. Although it is believed that this case represents an isolated incident, it is possible that some uranium mill workers may form a contemporary population that is occupationally exposed to radium. 5 references, 2 figures, 2 tables.

29426 (ANL—83-100-Pt.2, pp 21-32) **Relative activities of ^{212}Bi (thorium-C) and ^{228}Ra (mesothorium-1) in former radium dial workers.** Keane, A.T.; Essling, M.A.; Lucas, H.F. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

From analyses of bones, estimates were made of the relative intakes of ^{228}Ra and ^{226}Ra by the employees of a dial-painting studio that used luminous compounds activated with technical mesothorium. These data, in turn, were used to derive estimates of ^{228}Ra activity from activities of ^{226}Ra in living colleagues whose body contents of ^{226}Ra and ^{212}Bi had been measured. The indirectly determined ^{212}Bi to ^{228}Ra activity ratios in the living workers averaged 1.56 +- 0.10 (S.E.) at a median of 42 yr post intake. If no ^{228}Ra decay products are excreted, the expected ^{212}Bi to ^{228}Ra activity ratio at 42 yr after intake is 1.59 according to the simple power function of radium retention of Norris et al., and 1.72 according to the alkaline earth model of ICRP No. 20. 15 references, 2 tables.

29427 (ANL—83-100-Pt.2, pp 51-60) **Gastrointestinal absorption and retention of plutonium and uranium in the baboon.** Larsen, R.P.; Bhattacharyya, M.H.; Oldham, R.D.; Moretti, E.S.; Cohen, N. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

Individual isotopes of plutonium and uranium were administered both intragastrically and intravenously to a baboon. Samples of urine, faces, blood, and tissues were taken and are now being analyzed. Preliminary results indicate that the fractional absorptions of plutonium and uranium were 1×10^{-3} and 1×10^{-2}, respectively, and their retentions about one month later were about 20% and 10%, respectively, of the amounts absorbed. The fractional retentions of the intravenously injected plutonium and uranium at that time were 0.90 and 0.07. 13 references, 1 figure, 3 tables.

29428 (ANL—83-100-Pt.2, pp 61-64) **Radiochemical method for the simultaneous determination of ^{233}U, ^{236}U, ^{237}Np, ^{236}Pu, ^{238}Pu, and ^{239}Pu in biological materials.** Oldham, R.D.; Larsen, R.P. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

A radiochemical method has been developed for the determination of multiple isotopes of uranium, neptunium, and plutonium in biological materials. The elements are separated from the other sample constituents and from each other by anion exchange in halide media. Their recoveries are monitored by isotopic diluents. The amounts of the analyte and diluent isotopes of each element are measured alpha spectrometrically. The interelemental separation factors are generally greater than 10^2, and the recovery of each element ranges from 60% to 90%. 4 references, 1 table.

29429 (ANL—83-100-Pt.2, pp 65-68) **Gastrointestinal absorption and distribution of thorium in the mouse.** Larsen, R.P.; Oldham, R.D.; Bhattacharyya, M.H.; Moretti, E.S. Mar 1984. NTIS, PC A09/MF A01. Order Number DE84008870. TI84008870

In Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983.

The retention of thorium in liver, bone, and other tissues subsequent to its gastrointestinal absorption has been determined in fasted mice. The value obtained for fractional retention was 1.0×10^{-3}, which is about a factor of two lower than the values for plutonium and neptunium. The tissue distribution and the value for fractional excretion of absorbed thorium were the same as those for intravenously injected thorium. 5 references, 1 table.

29430 **(BNL—34757) Risk evaluation - conventional and low level effects of radiation.** Bond, V.P.; Varma, M.N. (Brookhaven National Lab., Upton, NY (USA)). Apr 1984. Contract AC02-76CH00016. 10p. (CONF-8404149—1). NTIS, PC A02; 3; GPO Dep. Order Number DE84011846.

From International symposium on environmental pollution and man; Cape Town, South Africa (30 Apr 1984).

Paper copy only, copy does not permit microfiche production.

Any discussion of the risk of exposure to potentially-hazardous agents in the environment inevitably involves the question of whether the dose effect curve is of the threshold or linear, non-threshold type. A principal objective of this presentation is to show that the function is actually two separate relationships, each representing distinctly different functions with differing variables on the axes, and each characteristic of quite different functions with differing variables on the axes, and each characteristic of quite different disciplines (i.e., the threshold function, of Pharmacology, Toxicology and Medicine [PTM]; the linear, non-threshold function, of Public Health including safety and accident statistics [PHS]). It is shown that low-level exposure (LLE) to radiation falls clearly in the PHS category. A function for cell dose vs. the fraction of single cell quantal responses is characterized, which reflects the absolute and relative sensitivities of cells. Acceptance of this function

would obviate any requirement for the use in Radiation Protection of the concepts of a standard radiation, Q, dose equivalent and rem. 9 references, 4 figures.

29431 **(CONF-830665—6) Analytical methods for radionuclides in liquid and solid media.** Sedlet, J. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 29p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84010522.

From Health Physics Society summmer school on internal radiation dosimetry; Catonsville, MD, USA (12 Jun 1983).

This lecture describes in vitro techniques for the radiochemical determination and dosimetry of radionuclides in the body that have been metabolized and are in the circulatory system. Measurements are made in the excretions and other body specimens such as blood, perspiration, hair, exhaled air, and tissue. 13 references, 4 tables. (ACR)

29432 **(INIS-BR—100) Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil.** Guimaraes, J.R.D. (Rio de Janeiro Univ. (Brazil). Inst. de Biofisica). Jun 1982. 132p. (In Portuguese). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780188.

In vitro interaction of benthic algae from the Angra dos Reis region, R.J., Brazil, was studied with critical radionuclides to be released in the liquid effluent of CNAAA (unit I). ^{137}Cs-^{60}Co - and ^{125}I uptake and loss by Sargassum filipendula, Padina Vickersiae and Acanthophora Spicifera were observed. Biological half-lives and bioaccumulation factors (B.F.) were estimated. Co and I uptake were fast (apparent equilibrium in 3 to 7 days). Cs uptake was slower (2 to 3 weeks). Loss followed an inverse pattern (fast for Cs, slow for Co and I). B.F. ranged from 10^1 for Cs, to 10^3 for I and 10^3-10^4 for Co. Higher B.F. for Co and I were found for P. vickersiae (up to 1,4 X 10^4) an A. spicifera (up to 7 X 10^3) respectively. These species represent important potential media for the transference of Co-I-and-to a much lesser extent - Cs isotopes, through food-webs. They exhibited high capacity to compete with local sandy sediments for the retention of Co and I. High B.F., rapid uptake and moderate to long biological half-lives enable S. filipendula, P. vickersiae and A. specifera to be powerful aids in the monitoring of radioactive contamination by Co and I isotopes. Since the majority of marine organisms tends to exhibit Cs B.F. similars to those reported here, these algae may also be used as monitors for Cs isotopes, the low B.F. being compensated by their abundance, wide distribution and facility of collection. (M.A.).

29433 **(INIS-mf—8381) Measurements and considerations concerning the application of X-rays under particular consideration of the X-radiation regulations.** Ewen, K. (Technische Hochschule Aachen (Germany, F.R.). Medizinische Fakultaet). 2 Nov 1981. 136p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780193.

The obtained results - concerning particularly occupational exposure to X-radiation and the magnitudes of organ dosages administered to the patients - for the first time led to quantitative information about the somatically significant dosage the population is exposed to due to roentgenological diagnostic measures. Proposals are made, which concern the performance of radiation protection seminars, for physicians, the organization of radiation protection responsibilities in hospitals and clinics, the determination of maximum permissible doses and the realization of medical supervision of persons occupationally exposed to X-radiation. A new dose magnitude is proposed which equally considers genetic and somatic risks. (DG).

29434 **(INIS-mf—8386) Effects of combined X-radiation and UV-radiation on HeLa cells.** Luible, M. (Muenchen Univ. (Germany, F.R.). Fachbereich Medizin). 22 Apr 1982. 31p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780187.

A combined X-ray-UV irradiation was performed in non-synchronized HeLa-cells. A pre-irradiation with UV-light, that reduced the survival rate to 42% and the following X-ray radiation yielded a similar dose-effect characteristic as with ordinary X-ray irradiation, only its shoulder was smaller. An additive radiation interaction with the cellular molecular structure was observed. A pre-irradiation with X-rays followed by step-wise UV-irradiation yielded a function similar to the UV-action curve but also with a narrower shoulder. A additive effect could be observed. One can conclude from this that in combined irradiation two interacting processes cause the death of the cells. The gene mutations caused by UV-light lead to cell death. X-rays however cause chromosome breaks, that in an unfavourable combination also lead to cell death. The DNA distorsion caused by the UV-light increases the possibility of misrepair. (orig.).

29435 **(LBL—16379) Response of sensitive human ataxia and resistant T-1 cell lines to accelerated heavy ions.** Tobias, C.A.; Blakely, E.A.; Chang, P.Y.; Lommel, L.; Roots, R. (Lawrence Berkeley Lab., CA (USA)). Jul 1983. Contract AC03-76SF00098. 45p. (CONF-830782—4). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012247.

From 11. L. H. Gray conference on cellular repair of radiation damage - mechanisms and modifying agents; Glasgow, UK (18 Jul 1983).

Portions are illegible in microfiche products.

The radiation dose responses of fibroblast from a patient with Ataxia telangiectasis (AT-2SF) and an established line of human T-1 cells were studied. Nearly monoenergetic accelerated neon and argon ions were used at the Berkeley Bevalac with various residual range values. The LET of the particles varied from 30 keV/μm to over 1000 keV/μm. All Ataxia survival curves were exponential functions of the dose. Their radiosensitivity reached peak values at 100 to 200 keV/μm. Human T-1 cells have effective sublethal damage repair as has been evidenced by split dose experiments, and they are much more resistant to low LET than to high LET radiation. The repair-misrepair model has been used to interpret these results. We have obtained mathematical expressions that describe the cross sections and inactivation coefficients for both human cell lines as a function of the LET and the type of particle used. The results suggest either that high-LET particles induce a greater number of radiolesions per track or that heavy-ions at high LET induce lesions that kill cells more effectively and that are different from those produced at low LET. We assume that the lesions induced in T-1 and Ataxia cells are qualitatively similar and that each cell line attempts to repair these lesions. The result in most irradiated Ataxia cells, however, is either lethal misrepair or incomplete repair leading to cell death. 63 references, 10 figures, 1 table.

29436 **(NUREG—1028) Ruptured cesium-137 well-logging source at Shelwell Services, Inc., Hebron, Ohio.** (Nuclear Regulatory Commission, Glen Ellyn, IL (USA). Region III). Apr 1984. 132p. NTIS, PC A07/MF A01 - GPO* $5.50. Order Number DE84901081.

Portions are illegible in microfiche products.

This report documents the circumstances surrounding the September 13, 1983, cesium-137 sealed source rupture incident at the Shelwell Services, Inc., facility in Hebron, Ohio. It focuses on the period from approximately 4:00 p.m. (EDT) on September 13, 1983 when the source ruptured, to October 5, 1983, when the radiological emergency response aspects of the event were concluded. Information outside these periods is recounted as necessary. The incident resulted in radiation doses to two licensee employees that exceeded the regulatory limits for whole-body and extremity exposures, and contamination of the licensee's facility, private residences, public buildings, and the personal effects of the licensee's employees, families, and friends. The emergency response required the combined efforts of NRC, US Department of Energy, and state personnel. The report describes the factual information and significant findings associated with the event and, thereby, provides a data base for subsequent detailed analyses and recommendations by various NRC offices. 4 references, 30 figures, 4 tables.

29437 **(NUREG/CR—3535) Age-dependent dose-conversion factors for selected bone-seeking radionuclides.** Cristy, M.; Leggett, R.W.; Dunning, D.E. Jr.; Eckerman, K.F. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract W-7405-ENG-26. 75p. (ORNL/TM—8929). NTIS, PC A04/MF A01; - GPO; GPO Dep. Order Number DE84008313.

Portions are illegible in microfiche products.

The transuranic elements and the radiostrontiums are bone-seekers and are potentially important contributors to bone dose from releases from a breeder reactor such as the Clinch River Breeder Reactor. Currently available age-specific dose-conversion factors for these nuclides are based on methods of ICRP Publication 2, published in 1959. ICRP Publications 26 and 30, published in 1977 and 1979, outline methodology incorporating new models and new concepts of risk, including consideration of dose to endosteal surfaces and active bone marrow rather than dose to whole bone. This report gives dose-conversion factors for acute intake of a given radionuclide by ingestion or inhalation at various ages from birth to adulthood, using the methodology of ICRP 26 and 30, but modified and extended as appropriate to include age-dependence. Results for 32 isotopes of strontium, plutonium, americium, and curium are tabulated. 79 references, 5 figures, 6 tables.

29438 **(NUREG/CR—3572) Determination of metabolic data appropriate for HLW dosimetry (ICRP-30), I.** Eckerman, K.F.; Leggett, R.W.; Meyer, R.; O'Kelley, G.D. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 78p. (ORNL/TM—8939). NTIS, PC A05/MF A01; 1 - GPO; GPO Dep. Order Number DE84010646.

Portions are illegible in microfiche products.

This report provides an initial evaluation of the dependence on chemical forms of estimates of health effects from radionuclides in high-level waste (HLW). Discussion is limited mainly to a review of studies of plutonium, americium, neptunium, and strontium that may be useful in identifying (a) chemical forms of these radionuclides that are likely to reach humans after migration from a waste repository and (b) differences in metabolism and organ doses that result from intake of various chemical forms of these radionuclides; we also attempt to identify research needs in these two areas. In addition to providing a limited review of the literature, this report identifies some of the problems involved in determining speciation of these radionuclides in the environment and provides a general picture of the potential errors that may be involved in applying models assumed to be independent of chemical form to estimate metabolism and dose from exposure to different chemical species of a radionuclide. 76 references, 2 figures, 4 tables.

29439 **(NUREG/CR—3745) Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983.** Eidson, A.F. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst.). May 1984. Contract AC04-76EV01013. 50p. (LMF—108). NTIS, PC A03/MF A01; 1 - GPO $4.00; GPO Dep. Order Number DE84012469.

Portions are illegible in microfiche products.

The problems addressed are the protection of uranium mill workers from occupational exposure to uranium through routine bioassay programs and the assessment of accidental worker exposures. Comparisons of chemical properties and the biological behavior of refined uranium ore (yellowcake) are made to identify important properties that influence uranium distribution patterns among organs. These studies will facilitate calculations of organ doses for specific exposures and associated health risk estimates and will identify important bioassay procedures to improve evaluations of human exposures. A quantitative analytical method for yellowcake was developed based on the infrared absorption of ammonium diuranate and U_3O_8 mixtures in KBr. The method was applied to yellowcake samples obtained from six operating mills. The composition of yellowcake from the six mills ranged from nearly pure ammonium diuranate to nearly pure U_3O_8. The composition of yellowcake samples taken from lots from the same mill was only somewhat less variable. Because uranium mill workers might be exposed to yellowcake either by contamination of a wound or by inhalation, a study of retention and translocation of uranium after subcutaneous implantation in rats was done. The results showed that 49% of the implanted yellowcake cleared from the body with a half-time (T sub 1/2) in the body of 0.3 days, and the remainder was cleared with a T sub 1/2 of 11 to 30 days. Exposures of Beagle dogs by nose-only inhalation to aerosols of commercial yellowcake were completed. Biochemical indicators of kidney dysfunction that appeared in blood and urine 4 to 8 days after exposure to the more soluble yellowcake showed significant changes in dogs, but levels returned to normal by 16 days after exposure. No biochemical evidence of kidney dysfunction was observed in dogs exposed to the less soluble yellowcake form. 18 figures, 9 tables.

29440 **(ORAU—225) Manpower trends and training requirements for radiation protection personnel in the DOE contractor system.** Trice, J. (Oak Ridge Associated Universities, Inc., TN (USA)). Feb 1984. Contract AC05-76OR00033. 107p. NTIS, PC A06/MF A01; GPO Dep. Order Number DE84010692.

This document reports results of a survey undertaken jointly by the Office of Nuclear Safety and the Office of Industrial Relations, US Department of Energy, with assistance from Oak Ridge Associated Universities. The purpose of the survey was twofold: (1) to determine the current status and recent trends in technician-level radiation safety manpower among DOE contractors; and (2) to document the scope of radiation safety training activities for radiation protection technicians and other workers within the DOE contractor system. Data reported here were obtained both by use of a formal written questionnaire completed by staff at 34 government-owned, contractor-operated (GOCO) nuclear facilities and through supplemental documentation obtained from contractors of training procedures and requirements. The first half of this report describes trends in radiation protection manpower and reports workforce characteristics of health physics technicians. The second half of the report describes program requirements and procedures in those facilities that conduct formal in-house training programs for their radiation protection workforces. 4 figures, 22 tables.

29441 **(ORNL—6021) Biology Division. Progress report, August 1, 1982-September 30, 1983.** (Oak Ridge National Lab., TN (USA)). Jan 1984. Contract W-7405-ENG-26. 258p. NTIS, PC A12/MF A01; GPO Dep. Order Number DE84006248.

The Biology Division is the component of the Oak Ridge National Laboratory that investigates the potential adverse health effects of energy-related substances. The body of this report provides summaries of the aims, scope and progress of the research of groups of investigators in the Division during the period of August 1, 1982, through September 30, 1983. At the end of each summary is a list of publications covering the same period (published or accepted for publication). For convenience, the summaries are assembled under Sections in accordance with the current organizational structure of the Biology Division; each Section begins with an overview. It will be apparent, however, that currents run throughout the Division and that the various programs support and interact with each other.

29442 (ORNL—6021, pp 3-4) **Mechanisms of mutagenesis and DNA repair.** Masker, W.E.; Kuemmerle, N.B.; Dodson, L.A. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The research deals with mechanisms of excision repair in Escherichia coli exposed to chemicals or ultraviolet (uv) radiation. During the past year attention has been focused on the incision proteins that initiate removal of pyrimidine dimers, benzo[a]pyrene adducts, and other bulky lesions from DNA. The product of the E. Coli uvrD gene was isolated and shown to be important in mediating closure of single strand DNA breaks promoted by the incision complex coded for by the uvrA, uvrB, and uvrC gene products. This suggests that the uvrD gene product (now known to be a helicase) is necessary either for dislodging the incision complex from the nicked DNA or for preparing a DNA primer-template configuration suitable for proper repair resynthesis.

29443 (ORNL—6021, pp 29-30) **Respiration shutoff in Escherichia coli after far-uv irradiation.** Swenson, P.A.; Norton, I.L. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Damage to DNA of Escherichia coli by uv, ionizing radiation and chemicals causes a number of responses that require the $recA^+$ and $lexA^+$ gene products. The responses include error prone repair (as indicated by mutagenesis), filamentation and induction of prophage λ. Another important rec/lex response, shutoff of respiration, which occurs 60 min after exposure to uv, is studied. Objective is to understand the genetic and biochemical bases of the shutoff process and its control.

29444 (ORNL—6021, pp 55-62) **Mammalian cytogenetics.** Aardema, M.J.; Au, W.W.; Gooch, P.C.; Heartlein, M.W.; Ho, T.; Luippold, H.E.; O'Neill, J.P.; Payne, H.S.; Preston, R.J. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

We have continued our studies of the mechanisms of induction of chromosome aberrations and sister chromatid exchanges (SCE) by chemical and physical agents, and the application of this knowledge to improve the basis for estimating the genetic and carcinogenic risk to man from exposure to such agents. We are also using these mechanistic approaches for the determination of the possible reasons for differences in sensitivity to the induction of chromosome aberrations and SCE in the same cell types of different species and different cell types within a species. We have also applied our information for conducting human population cytogenetic monitoring studies and interpreting the data.

29445 (ORNL—6021, pp 83-85) **Genetics of repair of radiation damage to DNA in bacteria.** Billen, D.; Hadden, C.T. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The purpose of this study was to determine whether chemical protection against single-strand breaks observed in toluene-treated E. coli (AB3063) subjected to X irradiation in air was due to the removal of OH radicals, or resulted from the production of secondary radicals. In toluene-treated cells DNA strand-break production can be measured without the complication of strand ligation during or immediately following x-ray exposure since such cells are deficient in DNA ligase activity.

29446 (ORNL—6021, pp 104-105) **Detailed analysis of radiation-induced litter-size reduction in specific-locus experiments.** Selby, P.B.; Russell, W.L. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

A detailed analysis of the records from past specific-locus experiments is in progress. Our analysis of the extent of the litter-size reduction induced by radiation has been completed. The analysis involved approximately 900,000 litters from 14 radiation experiments. It appears that the litter-size reduction at 600 R is 4.12% instead of our earlier crude estimate of 2.96%. Although an adjustment for this new estimate would raise the BEIR estimate of the number of individuals having a serious handcap because of radiation-induced segmental aneuploidy from 0.35 to 0.49 per million for 1 R of low-LET radiation, this analysis strengthens the view that these data clearly indicate that the risk from such induced gross chromosomal damage among liveborn individuals is slight.

29447 (ORNL—6021, pp 107-108) **Response of mouse spermatogonial stem cells to x-ray induction of heritable reciprocal translocations.** Generoso, W.M.; Cain, K.T.; Cacheiro, N.L.A.; Cornett, C.V.; Gosslee, D.G. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

We have obtained a good estimate of the shape of the heritable-translocation dose-effect curve for spermatogonial stemcells. Doses of 150, 300, 600, or 1200 R of acute X rays were used. The ascending portion of the humped dose-effect curve fits the linear model very closely. Second, the frequencies of heritable translocations observed in the 600 R x 2 and 500 R x 4 fractionation experiments appear to be within reasonable bounds of what might be expected from additivity. And thirdly, we have obtained the most reliable figure to date for the spontaneous frequency of heritable translocations; based on 5433 tested offspring, this frequency was 1.8×10^{-4}.

29448 (ORNL—6021, pp 122-123) **Meiotic segregation in partially sterile male translocation heterozygotes.** Cornett, C.V.; Cacheiro, N.L.A.; Hitotsumachi, S. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

From a study of partially-sterile translocations induced by TEM in male meiotic and postmeiotic stages, a positive correlation was observed between the degree of partial sterility and the frequency at which multivalent chromosomes were observed in diakinesis-metaphase I spermatocytes. In the present study it is being determined whether a similar correlation holds true for translocations derived from exposed spermatogonial stem cells. Two groups of x-ray-induced partially-sterile translocations are included in this study: one group derived from treated spermatogonial stemcells, the other from exposed postmeiotic stages. Results for both the gonial and the postmeiotic groups again indicate a positive correlation between degree of partial sterility and incidence of multiple chromosome associations.

29449 (ORNL—6021, pp 125-126) **Circadian rhythms of spermatogonial stem cells.** Oakberg, E.F.; Cummings, C.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

In order to examine possible differences in DNA synthetic activity with time of day, mice were given a single intraperitoneal injection of 25 μCi 3H-TdR, irradiated with 300 R 24 h later, and killed 207 h after labeling. This protocol restricts labeling to the long-cycling A/sub s/ spermatogonia. There was a significant effect of time of day, with low values at 9 a.m. and 12 midnight.

29450 (ORNL—6021, pp 126-127) **Effect of age on the spermatogonial stem cell population of the mouse.** Oakberg, E.F.; Cummings, C.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Stem-cell numbers decline between 12 weeks and 10 months. The new level is then maintained at 17 and 23 momths of age. Some consistent and as yet unexplained changes in the numbers of differentiating spermatogonia (A_1 through B) and preleptotene spermatocytes occur with increasing age.

29451 (ORNL—6021, pp 148-150) **Radiation immunology.** Perkins, E.H.; Klima, W.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Current studies aim to evaluate both immunologic and nonimmunologic mechanisms in the shifts of leukemia incidence. In nonirradiated RFM mice four primary types of leukemia occur (reticulum cell sarcoma, myeloid leukemia, thymic lymphoma and nonthymic lymphome) almost exclusively in the last third of life, reticulum cell sarcoma accounting for 90% of the total. After irradiation thymic lymphoma reaches >60% with an induction period of 5 to 6 months. Myeloid leukemia also increases but the time of occurrence is only slightly advanced.

29452 (ORNL—6021, pp 173-180) **Radiation carcinogenesis.** Ullrich, R.L.; Fry, R.J.M.; Ley, R.D.; Storer, J.B.; Terzaghi, M.; Bowles, N.D.; Jernigan, M.C.; McKeown, C.K.; Satterfield, L.C.; Triplett, L.L. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Studies on neutron carcinogenesis, time-dose relationships, the role of host factors in radiation carcinogenesis, and the dynamics of the carcinogenic process after exposure to radiation and chemicals are reported. Problems are being pursued with in vivo

studies as well as in vitro and in vivo/in vitro approaches. A common theme among all of these studies is the examination of mechanisms and the establishment of general principles which may alow a better understanding of the risks to humans from radiation exposure. Data from all of these studies are also being used to examine more direct methods of extrapolation of animal data to human risks. The program in ultraviolet radiation carcinogenesis (UVR) is concerned with development of model systems, methods and background information necessary for designing quantitative UVR carcinogenesis experiments, the role of interactions of UVR and chemicals, and interactions between ionizing and ultraviolet radiation in skin carcinogenesis.

29453 **Unified approach to age-dependent metabolic modeling.** Crawford-Brown, D.J. (Oak Ridge National Lab., TN). *Health Physics;* **46**: No. 4, 809-832(Apr 1984). Contract W-7405-ENG-26.

A generalized approach for estimating the effect of age on deposition fractions and retention half-times is presented. The theory employs measured physiological and anatomical parameters and relates these to metabolic parameters within a general framework intended for use in setting secondary limits for exposure of the general public. Calculated results indicate that younger ages will be characterized by increased deposition fractions and decreased half-times for retention following radionuclide uptakes. Representative examples are provided for radionuclides of current interest in health physics practice.

29454 **Plutonium partitioning among internal organs.** Thomas, R.G.; Healy, J.W.; McInroy, J.F. (Los Alamos National Lab., NM). *Health Physics;* **46**: No. 4, 839-844(Apr 1984).

An estimate of partitioning of plutonium among skeleton, liver, and other organs is needed to estimate the radiation dose to individual organs. This review was done to provide an analysis of the coefficients currently used for the translocation of plutonium from blood to other organs and excreta. Data from both experimental animals and human autopsy cases were used in this analysis. The analysis of data from 257 experimental animal and 169 human subjects led to a conclusion that a 70-30% split of plutonium distribution between skeleton and liver, respectively, would be appropriate for use in plutonium organ distribution models. The variability of plutonium distribution within all compartments is emphasized, with the conclusion that the coefficients of uptake to individual organs are adequate to estimate average organ doses for an exposed population but use for estimating doses for an individual will lead to uncertain results.

29455 **Biokinetics of inhaled ^{244}Cm oxide in the rat: effect of heat treatment at 1150°C.** Guilmette, R.A.; Kanapilly, G.M.; Lundren, D.L.; Eidson, A.F. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Health Physics;* **46**: No. 4, 845-858(Apr 1984). Contract AC04-76EV01013.

A study was conducted in rats to determine solubility and subsequent metabolism of an inhaled aerosol of curium treated at high temperatures. Young adult Fischer-344 rats received a single inhalation exposure to one of three monodisperse aerosols of $^{244}Cm_2O_3$ heat-treated at 1150°. Additionally an injection study with curium citrate was done to define the systemic behavior of Cm in this rat model. The in vivo solubility was inversely related to the aerosol particle size. The relationship of the results of this study to results from other experimental inhalation studies with curium oxide aerosols is discussed, as is the relevance to bioassay interpretation and risk assessment in man.

29456 **Comparison of early lung clearance of yellowcake aerosols in rats with in vitro dissolution and IR analysis.** Damon, E.G.; Eidson, A.F.; Hahn, F.F.; Griffith, W.C. Jr.; Guilmette, R.A. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Health Physics;* **46**: No. 4, 859-866(Apr 1984). Contract AC04-76EV01013.

The lung retention of uranium was determined in rats that inhaled aerosols of commercial yellowcake powders obtained from two mills (Mill A and Mill D) and whose chemical composition and solubilities in vitro were significantly different. Analysis by IR absorption indicated Mill A yellowcake contained 82% ammonium diuranate (ADU) and 18% U_3O_8. The Mill D powder contained 25% ADU and 75% U_3O_8. In vitro dissolution studies indicated for the Mill A sample, ~ 85% of the uranium had a dissolution half-time (T/sub 1/2) of < one day, with the remainder dissolving with a half-time of 500 days. For the Mill D sample, 25% had T/sub 1/2/ < one day and 75% had T/sub 1/2/ of 300 days. Groups of 50 rats were exposed by nose-only inhalation to aerosols of either the Mill A or the Mill D yellowcake. Selected tissues and excreta samples were assayed by fluorometry to determine their uranium contents. For the Mill A yellowcake, 78% initial lung burden cleared with T/sub 1/2/ of 0.5 days, and 22% with T/sub 1/2/ of 240 days. For the Mill D yellowcake, 25% initial lung burden cleared with T/sub 1/2/ of 3.5 days and 75% with T/sub 1/2/ of 110 days. Thus, the lung clearance of uranium in the rat mimicked the in vitro dissolution data and supported the contention that ADU should be considered as a Class D compound (T/sub 1/2/ = 0.5 days) and U_3O_8 behaves in the lung as a class Y (T/sub 1/2/ > 100 days) material.

29457 **Accelerated heavy particles and the lens. 1. Cataracogenic potential.** Merriam, G.R.; Worgul, B.V.; Medvedovsky, C.; Zaider, M.; Rossi, H.H. (Columbia Univ., New York, NY). *Radiation Research;* **98**: No. 1, 129-140(Apr 1984). Contract AC02-78EV04733.

The effect of varying doses of accelerated (570 MeV/amu) argon ions on the rat lens is described with detailed observations on the sequence of development of the cataracts, the time-dose relationship, and the analysis of their cataractogenic potential. The relative biological effectiveness (RBE) of the heavy particles for cataract production, compared to low linear energy transfer (LET) radiation (X-rays), has been established. These data indicate that, as with neutrons, the RBE increases with decreasing dose and that at a dose of 0.05 Gy an RBE of about 40 was observed.

29458 **^{211}At radiocolloid therapy: further observations and comparison with radiocollocis of ^{32}P, ^{165}Dy, and ^{90}Y.** Bloomer, W.D.; McLaughlin, W.H.; Lambrecht, R.M.; Atcher, R.W.; Mirzadeh, S.; Madara, J.L.; Milius, R.A.; Zalutsky, M.R.; Adelstein, S.J.; Wolf, A.P. (Harvard Medical School, Boston, MA). *International Journal of Radiation Oncology, Biology and Physics;* **10**: No. 3, 341-348(Mar 1984). Contract AC02-76CH00016.

The therapeutic efficacy of α and β emitting radiocolloids was compared for the treatment of experimental malignant ascites. ^{211}At is an almost pure α-emitter. As ^{211}At-tellurium colloid, the dose survival curve is linear and extrapolates through the origin in a manner similar to other high linear energy transfer radiations. Doses of 25 μ Ci were curative. Less than curative doses showed a graded prolongation of median survival. In cured mice, long term histological changes were seen in thyroid tissue. Acute changes were seen in the gastrointestinal tract as early as 2 hr after radiocolloid adminstration; these changes reached a plateau at 6 hr and were essentially gone 36 hr later. By comparison, radiocolloids of the beta emitters ^{32}P, ^{165}Dy, and ^{90}Y were not curative, but relatively large doses did substantially prolong median survival. The doses for maximal effect were 150 μ Ci ^{32}P-chromic phosphate, 8000 μ Ci ^{165}Dy-ferric hydroxide macroaggregates and 200 μ Ci ^{90}Y-citrate. The most compelling reason for the increased therapeutic efficacy of ^{211}At-tellurium colloid is the direct and densely ionizing character of the emitted alpha radiations.

29459 **Effect of alkali on the size dispersity of mammalian DNA measured by filter elution.** van Ankeren, S.C.; Wheeler, K.T. (Univ. of Rochester, NY). *Biophysical Journal;* **45**: No. 2, 421-429(Feb 1984).

DNA from unirradiated and irradiated cultured 9L rat brain tumor cells was held for varying times in low ionic strength solutions at pH 11.0, 12.3, or 12.9. The effect of this exposure to alkali on the DNA size distribution was determined by comparing the DNA filter elution profiles obtained experimentally with those theoretically predicted for monodispersed and random distributions. At pH 12.3 or 12.9, DNA from cells irradiated with 300 rad eluted with first-order kinetics corresponding to a random DNA was exposed to pH 12.3 for 24 h. At pH 12.3 or 12.9, DNA from unirra-

diated cells eluted initially with complex kinetics that later became linear (18-21 h for pH 12.3 or 13-15 h for pH 12.9), characteristic of a monodispersed DNA size distribution. The median size of the distribution decreased if the irradiated DNA size distribution. Holding either unirradiated or irradiated DNA at pH 11.0, below the critical unwinding pH, produced no effect on the elution profiles. Analysis of these filter elution data indicated that after sufficient exposure to pH 12.3 or 12.9, undamaged DNA molecules from mammalian cells elute as a single-stranded monodispersed size distribution of $\sim 1 \times 10^{10}$ daltons. While the possibility cannot be completely eliminated that this monodispersed size represents an upper limit determined by physical forces, these results, in conjunction with those obtained using other techniques, lend credence to the existence of a nonrandom higher-order structure in mammalian chromosomal DNA.

29460 **Circular DNA unwound by photoproducts other than pyrimidine dimers.** Ciarrocchi, G.; Sutherland, B.M. (Brookhaven National Lab., Upton, NY). *BioScience;* **34**: No. 1, 45-46(Jan 1984).

Agarose gel electrophoresis is discussed for measuring the altered tertiary structure of modified DNA and in particular the alteration of twist angles between adjacent base-pairs. With this technique and substrate it is possible to detect alterations of DNA structure resulting in a change of the degree of supercoiling equivalent to a modification of a fraction of superhelical turn. Altered electrophoretic mobility of DNA topoisomers containing UV photodamages other than pyrimidine dimers were specifically photoreversed by irradiation with photoreactivating light in the presence of Escherichia coli photoreactivating enzyme.

29461 **Radiation inactivation of glutamate dehydrogenase hexamer: lack of energy transfer between subunits.** Kempner, E.S.; Miller, J.H. (National Inst. of Health, Bethesda, MD). *Science (Washington, D.C.);* **222**: 586-589(11 Nov 1983).

The effects of ionizing radiation on glutamate dehydrogenase and on fluorescein isothiocyanate-tagged glutamate dehydrogenase were analyzed by target theory. Enzymatic activity, fluorescence, and the survival of the 56,000-dalton monomer subunit were determined on frozen samples irradiated at -125°C and on lyophilized samples irradiated at either -135°C or +30°C. The effects of temperature were the same for all three parameters. Enzymatic activity was lost after small doses of high-energy electrons, whereas fluorescence and monomer subunits survived much larger doses of radiation. Target analysis revealed that the functional unit size for enzymatic activity was the hexamer, confirming both the earlier radiation study and conventional biochemical analyses. Target sizes obtained from fluorescence and subunit structure measurements were close to that of the monomer. These results indicate that the primary ionization caused by electron bombardment results in damage to a single polypeptide strand and that there is no massive transfer of radiation energy to other units in the hexamer.

29462 **Radiation hazards from ear studies and neckwear.** Lyon, W.S. (Oak Ridge National Lab., TN (USA)). *Radiochemical and Radioanalytical Letters;* **59**: No. 1, 3-6(17 Oct 1983).

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted refs.

Two extreme examples, the Moessbauer examination of the inner ear and the wearing of jewerly painted with radioactive materials, are given to illustrate the problem of radiation risks to the public. The first one seems obviously harmful (7.5×10^3 R) but is received in the course of a scientific measurement; the other one is quite small (1.2 R) but comes about from an unimportant cause. The question is whether these types of activities should and could be prevented to free the society of every radiation risks.

29463 **Combined hit theory-microdosimetric explanation of cellular radiobiological action.** Dond, V.P.; Varma, M.N. (Brookhaven National Lab., Upton, NY (USA)). pp 81-95 of Biological effects of low-level radiation. Proceedings of an international symposium on the effects of low-level radiation with special regard to stochastic and non-stochastic effects jointly organized by the IAEA and the WHO and held in Venice, Italy, 11-15 April 1983. Vienna, Austria; IAEA (1983). (CONF-830450—; IAEA-SM—266/63). Contract AC02-76CH00016.

From IAEA/WHO symposium on biological effects of low level radiation; Venice, Italy (11 Apr 1983).

Hit theory is combined with microdosimetry in a stochastic approach that explains the observed responses of cell populations exposed in radiation fields of different qualities. The central thesis is that to expose a population of cells in a low-level radiation field is to subject the cells to the potential for interaction with charged particles, quantifiable in terms of the charged particle fluence PHI. When such an interaction occurs there is resulting stochastic transfer of energy to a critical volume (CV) of cross-section σ within the cell(s). The severity of cell injury is dependent on the amount of energy thus imparted, or the hit size. If the severity is above some minimal level, there is a non-zero probability that the injury will result in a quantal effect (e.g., a mutational or carcinogenic initial event, cell transformation). A microdosimetric proportional counter, viewed here as a phantom cell CV that permits measurements not possible in the living cell, is used to determine the incidence of hit cells and the spectrum of hit sizes. Each hit is then weighted on the basis of an empirically determined function that provides the fraction of cells responding quantally, as a function of hit size. The sum of the hits so weighted provides the incidence of quantally responding cells, for any amount of exposure PHI in a radiation field of any quality or mixture of qualities. The hit size weighting function for pink mutations in Tradescantia is discussed, as are its implications in terms of a replacement for relative biological effectiveness and dose equivalent.

5602 Thermal Effects

29464 **High-temperature responses of North American cacti.** Smith, S.D.; Didden-Zopfy, B.; Nobel, P.S. (Univ. of California, Los Angeles). *Ecology;* **65**: No. 2, 643-651(Apr 1984). Contract AC03-76SF00012.

High-temperature tolerances of 14 species of North American cacti were investigated. A reduction in the proportion of chlorenchyma cellb ?taking up a vital stain (neutral red) and reduced nocturnal acid accumulation were used as indicators of high-temperature damage. All species tolerated relatively high tissue temperatures, the mean maximum tolerance being 64°C, with an absolute maximum of 69° for two species of ferocactus. Such tissue tolerances to high temperature may be unsurpassed in vascular plants. Morphological features can affect tissue temperatures. Specifically, thin-stemmed species such as the cylindropuntias attain lower maximum temperatures under identical microclimatic conditions than do more massive species; they also tend to be less tolerant of high-temperature stress. Stem diameter changes of three species of columnar ceriod cacti along a Sonoran Desert latitudinal transect were previously attributed to adaptation to progressively colder temperatures northward. Such changes can also be interpreted as a morphological adaptation to high temperatures, particularly in the southern Sonoran Desert. Interspecific differences in high-temperature tolerance may account for distributional differences among other species. Acclimation of high-temperature tolerances in response to increasing day/night air temperatures was observed in all 14 species, especially at higher growh temperatures. From 40° day/30° night to 50°/40°, the tolerable tissue temperatures increased an average of 6°. Half-times for the acclimation shifts were 1-3d. Although cacti attain extremely high tissue temperatures in desert habitats, tolerance of high temperatures and pronounced acclimation potential allow them to occur in some of the hottest habitats in North America.

5603 Chemicals Metabolism And Toxicity

REFER ALSO TO CITATION(S) 27791, 27791, 27840, 29188, 29208, 29218, 29290, 29301, 29327, 29328, 29341, 29342, 29355, 29441

29465 **(AD-A—137115/2) Protection against trichothecene mycotoxins.** (National Research Council, Washington, DC (USA)). 1983. 238p. NTIS, PC A11/MF A01.

Trichothecenes and their effects on humans have attracted national and international attention because of their reported use in warfare. This study arose out of a concern about such uses and the potential harm these substances could cause among civilian and

military populations that might be exposed to them. Accordingly, this report is intended to assist in the protection not only of U.S. Armed Forces against the adverse effects of trichothecenes but also of civilian populations that may come into contact with these toxins during peace or war. The committee concentrated on the following two major objectives: (1) examination of the environmental and biological behavior of the trichothecene class of mycotoxins to determine what protective measures can be taken and (2) development of the means for optimizing the protection of human beings against the effects of trichothecenes through appropriate prophylaxes and treatments.

29466 **(DOE/OR/21400—T11) Testimony presented to the Massachusetts Department of Public Health, March 19, 1984, Jamaica Plain, Massachusetts.** Griesemer, R.A. (Oak Ridge National Lab., TN (USA)). 19 Mar 1984. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011652.

The testimony relates the witness' experience as Director of the Carcinogenesis Bioassay Program at the National Cancer Institute relating to experiments performed with ethylene dibromide (EDB). NCI conducted carcinogenicity bioassays of EDB in rats and mice by both the oral and inhalation routes of exposure. EDB produced multiple kinds of cancer at multiple body sites, in three strains of rats and two strains of mice, in both sexes, at high incidences, with short latent periods, and by three routes of exposure (oral, inhalation, and skin application). (ACR)

29467 **(FWS/OBS—80/40.1) Effects of air emissions on wildlife resources.** Newman, J.R. (Environmental Science and Engineering, Inc., Gainesville, FL (USA)). May 1980. 38p. NTIS, PC A03/MF A01; - GPO*. Order Number DE84901175.

Incidents of injury and death to wildlife as a result of air emissions have been documented for over 90 years. This report summarizes the known effects of air emissions on wildlife resources. Contamination of wildlife by air emissions can occur in three ways: inhalation, absorption, and ingestion. Ingestion is the most common mode of contamination. Air emissions have caused mortality, debilitating injury, disease, and lowered resistance to stress. Wildlife are indirectly affected by contamination of their food resources and by habitat loss. Wildlife can serve as biological indicators of air quality. Some implications are discussed for wildlife management in regions affected by air emissions. 76 references, 3 figures, 7 tables.

29468 **(FWS/OBS—80/40.2) Potential impacts of low pH on fish and fish populations.** Fritz, E.S. (National Power Plant Team, Ann Arbor, MI (USA)). Oct 1980. 20p. NTIS, PC A02/MF A01; - GPO*. Order Number DE84901177.

Descriptions of the effects of low pH on fish are presented. Subject areas are identified in which further studies are needed. Laboratory experiments show that the toxic effect of low pH differs among species, populations, and age-groups of the same species. Field studies show that the toxicity of low pH is compounded by other water characteristics. Evidence from a number of laboratory and field studies indicate that low pH could increase susceptibility to disease, impair osmoregulation and ionregulation, inhibit hormone production or activity, result in genetic damage, change predator-pray relationships, degrade habitat, and increase the availability of toxic substances. Low pH is shown to result in reproductive failure on the population level, recruitment failure, and on the individual level, cessation of spawning. Slight declines in productivity as they relate to stressed populations, are shown to have the potential to result in unrecoverable drops in population density. 50 references, 3 tables.

29469 **(ORNL—6017) Problem definition study on emission by-product hazards from diesel engines for confined space army workplaces. Final report.** Opresko, D.M.; Holleman, J.W.; Ross, R.H.; Carroll, J.W. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 222p. NTIS, PC A10/MF A01; GPO Dep. Order Number DE84012069.

A review of the available literature was undertaken to identify and characterize diesel exhaust emissions, to identify the factors which determine exhaust composition, to relate the potential effects of exhaust composition to air quality of confined space workplaces, and to evaluate the monitoring and modeling methodology which has been used to ensure that air quality standards are maintained under such conditions. 245 references, 5 figures, 8 tables.

29470 (ORNL—6021, pp 75-79) **Mammalian biochemical genetics.** Popp, R.A.; Popp, D.M. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

An ethylnitrosourea induced mutation at the compound globin (Hbb) locus has been identified. The mutation changes the electrophoretic mobility of the majority of the beta-globin polypeptide controlled by the Hbb/sup s/ allele. The specific nature of this mutation is under investigation but it is likely that the electrophoretic mobility change is caused by the substitution of a single amino acid resulting from an ethylnitrosourea induced substitution of a single base in the DNA. Definition of the precise base substitution involved will add to our data base of specific mutations induced by chemicals such as ethylnitrosourea.

29471 (ORNL—6021, pp 86-88) **Analysis of teratogens and potential teratogens using FETAX (frog embryo teratogenesis assay: Xenopus).** Dumont, J.N.; Epler, R.G. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The FETAX assay is rapid and cost effective and uses the developing embryos of the amphibian, Xenopus laevis. Embryos are exposed for 96 hours beginning at the mid to late blastula stage of development. The end-points of the assay are easily scored and provide information on embryotoxicity and teratogenicity, and, in addition, data on the relative toxic or teratogenic potential. FETAX has been validated with 40 known mammalian teratogens and nonteratogens. Those used for validation include pesticides (Carbaryl, Disulfram, Captan, Lindane and Griseofluvin), 2,4-dinitrophenol, propylene glycol, EDTA, meclizine, Velban, vinblastine sulfate, cyclophosphamide, and methotrexate.

29472 (ORNL—6021, pp 93-96) **In-depth study of chemical mutagenesis in mouse germ cells using n-ethyl-n-nitrosourea (ENU) as a model mutagen.** Russell, W.L.; Hunsicker, P.R.; Carpenter, D.A.; Phipps, E.L.; Montgomery, C.S.; Bangham, J.W.; Guinn, G.M.; Steele, M.H.; Thompson, H.M.; Jr. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

For the estimation of genetic risk, it is important to know the relative mutational sensitivities of the various germ-cell stages. We have tested the mutational sensitivity of these stages to ENU, because we had discovered that they are extremely sensitive to mutation induction by methylnitrosourea (MNU). Accordingly, we have now performed six replications of an experiment with a 50 mg/kg dose of ENU which does allow some survival of cells in the stages of interest. In matings made in the period between 32 and 42 days after injection (the period that gives the high mutation rate with MNU), we have obtained 4 specific-locus mutations in 5576 offspring. This is a markedly different mutation rate from 1 mutation in 20,836 offspring obtained from matings made in the period before 32 days after injection. Thus, as with MNU, differentiating spermatogonia or early spermatocytes are mutationally sensitive to ENU, and the currently estimated mutation frequency with ENU is similar to that induced by the same dose in stemcell spermatogonia.

29473 (ORNL—6021, pp 96-97) **Use of methylnitrosourea (MNU) as a model mutagen to explore biological variables affecting mutagenicity in mouse germ cells.** Russell, W.L.; Hunsicker, P.R.; Stelzner, K.F.; Maddux, S.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

In the matings made in the 32 to 42 day period after injection with methylnitrosourea (MNU), 21 specific-locus mutations

were obtained in 10,027 offspring. In all other matings involving post-stemcell stages, (matings made on days 1 to 31 and 43 to 49 after injection) only 3 mutations were obtained in 25,656 offspring. The mutation frequency is slightly, but not significantly, below what would be expected on a linear interpolation between the frequencies at 0 and 75 mg/kg. MNU appears to be more effective than ENU in these mutationally sensitive germ-cell stages, but even at 50 mg/kg of ENU there is clearly more killing of these cells than there is with 44 mg/kg of MNU, and this may obscure the true mutation rate with ENU.

29474 (ORNL—6021, pp 97-98) **Use of MNU-ENU double exposure in the spot test to explore the in vivo action of an O^6 alkyl transferase.** Russell, L.B.; Montgomery, C.S. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Alkylations at the O^6 position of guanine are considered to be more highly mutagenic than alkylations at certain other sites in DNA, possibly explaining, in part, the high mutagenicity of ENU (ethylnitrosourea). Experiments have identified and studied a transferase that de-alkylates the O^6 position, leading to repair of the genetic lesions. There is some evidence that this enzyme may be more effective in removing methyl than ethyl groups. To explore the action of this transferase in mammalian cells in vivo, a mouse spot test in which exposure to MNU (methyl nitrosourea) was followed by ENU-exposure was carried out. Pregnant females at 10-1/4 days of gestation were injected with 3-mg/kg MNU, followed an hour later by 25 mg/kg ENU. The teratogenic effects of ENU (digital anomalies) were greatly enhanced by the pre-treatment with MNU.

29475 (ORNL—6021, pp 98-99) **Specific locus studies with DBCP and HMPA.** Russell, L.B.; Hunsicker, P.R.; Guinn, G.M.; Maddux, S.C.; Montgomery, C.S.; Steele, M.H.; Stelzner, K.F.; Thompson, H.M. Jr. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

1,2-Dibromo-3-chloropropane has been shown mutagenic in various systems and is suspected of causing fertility impairments in men, but had not been tested for induction of transmissible effects. A large specific-locus study, toxicity tests, and a fertility experiment have been carried out. The major portion of the specific-locus test (SLT) was carried out with males that received five daily i.p. injections of 80 mg/kg each. These males showed no fertility disturbance at any interval after treatment. A histological study of germ-cell survival in the testis also showed no effect. Hexamethylphosphoramide induces various mutational endpoints in Drosophila, but has yielded conflicting results in mammalian in vitro tests. A specific-locus study of 2000 mg/kg was carried out. No fertility disturbances were noted at any interval after exposure. In the SLT, the spermatogonial stemcell result (no mutations in 20,998 offspring classified) was clearly negative.

29476 (ORNL—6021, pp 99-100) **Effects of inhaled ethylene oxide on induction of heritable gene mutations.** Russell, L.B.; Cumming, R.B.; Hunsicker, P.R.; Bangham, J.W.; Carpenter, D.A.; Phipps, E.L. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

In a large-scale inhalation study, male mice were exposed to ethylene oxide in workday periods (6 hours/day, Mondays to Fridays), mostly at the level of 255 ppM. Males were mated to multiple-recessive T-stock females shortly after the end of the inhalation peiod and bred normally for the remainder of the study. Altogether, 71,387 offspring were classified in the experiment and 5 mutations observed, including a cluster of two. EtO thus appears to present a very much smaller risk for induction of gene mutations in stemcell spermatogonia than it does for other genetic endpoints induced in other types of cells.

29477 (ORNL—6021, pp 100-101) **Heritable translocation and dominant-lethal mutation dose-response studies with inhaled ethylene oxide.** Generoso, W.M.; Cain, K.T.; Hoskins, J.B.; Inman, J.R. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

During the past year we completed portions of a study to determine the shape of the dose-effect curves for heritable translocations and dominant-lethal mutations induced by inhaled ethylene oxide (EtO). Exposure of parental mice, production of F_1 progeny, and dominant-lethal experiments have already been completed for 250, 204, and 165 ppM concentrations. Results available to date are from the dominant-lethal studies. In matings that took place during the first week posttreatment, the incidences of dominant-lethal mutations were 18%, 22%, and 31% for 165, 204, and 250 ppM concentrations, respectively. This result indicates that dominant-lethal mutations were induced at the three EtO concentrations and that the responses appear not to deviate from a straight line.

29478 (ORNL—6021, pp 101-102) **Non-breeding-test methods for studying induction of dominant skeletal mutations are easily applied to strain used in specific-locus experiments.** Selby, P.B.; Niemann, S.L. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The animals examined were injected with either 300 or 400 mg/kg of ethylnitrosurea. Only offspring derived from treated stem-cell spermatogonia were studied. The frequencies of presumed dominant skeletal mutations following 0, 3 x 100 mg/kg, and 4 x 100 mg/kg of ENU were 2/374, 10/243, and 10/180, respectively. The induced mutation frequencies at the two exposure levels are 3.5 and 5.0%. At the higher exposure, the induced frequency of presumed mutations of a type likely to be of clinical importance is 4.5%. The indices of mutation were 0% in the control, 11.5% in the 3 x 100 mg/kg group, and 12.4% in the 400 mg/kg group. In each case, the increase over the control is statistically significant.

29479 (ORNL—6021, pp 103-104) **Breeding-test experiment shows transmission of many ENU-induced mutations.** Selby, P.B.; Raymer, G.D.; Whitt, B.J.M.; McKinley, T.W. Jr. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Following the finding of the dramatically high mutation frequencies of ethylnitrosourea as evidenced by skeletal deformities, it was decided to test the transmissibility of many of the presumed mutations scored in the non-breeding test studies. Altogether 141 F_1 males were collected and given a chance to sire offspring before they were prepared for skeletal examination. Five of the 114 experimental males were presumed mutants. Two of these failed to sire any offspring. A third male was shown to transmit a mutation having low penetrance for a very severe effect. This male had scoliosis and fusions in the lumbar region and a grossly deformed left hind leg, missing a fibula, most of the tarsals, and two of the digits. One of his daughters was similarly, but more severely, affected. Even with just 1 affected offspring, the frequency of the severe malformation was statistically significantly higher among his total progeny than in the control. The remaining two presumed mutants are still being tested.

29480 (ORNL—6021, pp 105-106) **Cytogenetic analysis of sterile male progeny from mutagen-exposed parents.** Cacheiro, N.L.A.; Cornett, C.V. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Approximately one-third of transmitted reciprocal translocations induced by ionizing radiations or alkylating chemicals in male postmeiotic stages cause complete sterility in male progeny. An experiment was conducted on the ability of methylmercuric hydroxide to increase the incidence of sex-chromosome aneuploids (XXY and XYY conditions are sterile) as a result of induced sex-chromosome nondisjunction in male or female germ cells. In the mercury-

exposed group, there were 17 steriles out of 1267 progeny tested (1.34%), while in the control group there were three steriles out of 1262 tested (0.24%). Analysis of the 17 steriles from the mercury group revealed one XYY and 16 with no detectable chromosomal abnormalities. The three steriles from the control group had no detectable chromosomal abnormalities. These data suggest that the mercury treatment was not effective in inducing sex-chromosome nondisjunction in male and female meiocytes.

29481 (ORNL—6021, pp 108-109) **DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice.** Generoso, W.M.; Cain, K.T.; Hoskins, J.B. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

It has been postulated that the production of dominant-lethal mutations and heritable translocations is determined by the stability of alkylation products in the chromosomes. If these products are intact in the male chromosomes at the time of sperm entry, they may be repaired in fertilized eggs. If repair is not effected and the alkylation products persist to the time of pronuclear chromosome replication, they lead to dominant-lethality. The production of heritable translocations requires the transformation of unstable alkylation products into lesions that are converted into chromosome exchange after sperm enters the egg but prior to the time of pronuclear chromosome replication.

29482 (ORNL—6021, pp 110-111) **Early embryonic lethality induced by seed oils in female mice treated prior to insemination.** Generoso, W.M.; Hoskins, J.B.; Cain, K.T.; Washington, W.J. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Virgin females 10 to 12 weeks old were given a single i.p. injection of 0.4 ml corn oil. All females were mated during the 6 days following injection and killed for uterine analysis 12 to 15 days after mating. The corn oil-treated groups had up to 30% deciduomata (all three strains were affected), while none of the control groups had more than 5%. To determine whether other oils might produce a similar effect, we tested 0.4 ml single i.p. injections of peanut oil, sesame oil, olive oil, or mineral oil in F_1 females. All three plant oils were found to increase the incidence of deciduomata. Mineral oil, on the other hand, had no effect whatsoever.

29483 (ORNL—6021, pp 111-112) **Restudy of the effectiveness of ingested ethyl alcohol to cause nondisjunction in mouse oocytes.** Washington, W.J.; Cacheiro, N.L.A.; Generoso, W.M. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The dominant-lethal response of female mice given ethyl alcohol orally shortly after mating was investigated. Also, a corresponding cytological analysis of the first postfertilization metaphase prior to first cleavage division was conducted.

29484 (ORNL—6021, pp 112-114) **Development of tests that detect induction of meiotic nondisjunction in mammals.** Russell, L.B. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The discovery in recent years of mouse populations carrying Robertsonian translocations that, in the aggregate, involve all chromosomes has provided tools for the systematic study of the phenotype of animals trisomic or monosomic for any given chromosome. Among chemicals that appear to have produced trisomy by meiotic nondisjunction in mammals are agents that act on DNA (EMS, MMS, 6-mercaptopurine, and possible cyclophosphamide), agents that act on the spindle (colchicine), and agents with largely unknown action (cadmium chloride, halothane, certain hormones). It is noteworthy that agents of the first group have positive results when applied to preleptotene stages of spermatogenesis.

29485 (ORNL—6021, pp 114-115) **Evaluation of existing mutagenicity bioassay for purposes of genetic risk assessment.** Russell, L.B. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

It must be assumed that there is a probability of genetic hazard to human beings if mutation induction can be demonstrated in the germline of experimental mammals. However, for a large percentage of chemicals, mammalian germline (MG) mutation data do not yet exist, and efforts to identify possible genetic hazard must be based on results from other tests. An attempt was made to evaluate the degree of reliability with which various types of data may accomplish this task.

29486 (ORNL—6021, pp 115-116) **Chemical dosimetry studies in mammalian germ cells.** Sega, G.A.; Jetton, A.E.; Harvey, H.R.; Owens, J.G.; Hansler, S.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Studies of the biochemical interactions of ethyl nitrosourea (ENU) with germ cells in the male mouse were initiated. After an i.p. injection of 50 mg/kg of ^{3}H-labeled ENU, spermatozoa have been recovered from the vasa deferentia of exposed males over a 28-day time period. The alkylation pattern observed showed about a two-fold greater level of sperm-head ethylation 8 to 14 days after treatment. This indicated that late spermatid to early spermatozoal stages were being alkylated somewhat more than the other meiotic and postmeiotic germ-cell stages.

29487 (ORNL—6021, pp 116-117) **DNA repair studies in mammalian germ cells.** Sega, G.A.; Owens, J.G. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

In submammalian test systems, nitrosocarbamates (NEC) are 100-fold more mutagenic than are their corresponding nitrosourea homologues. To learn more about its interaction with germ-cell DNA in the mouse testis, male mice were given i.p. injections of NEC. Testicular injections of [^{3}H]dThd were given along with the NEC. Sixteen days after treatment, sperm were recovered from the caudal epididymides and assayed for an unscheduled-DNA-synthesis.

29488 (ORNL—6021, pp 118-119) **DNA damage in mammalian sperm assayed by alkaline elution.** Sega, G.A.; Generoso, E.; Owens, J.G. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Alkaline elution procedures have been used to measure DNA damage in mammalian sperm with at least some classes of chemicals. In the case of MMS and EtO, there is a good correlation between the pattern of DNA elution in the developing sperm of treated mice and the pattern of induced genetic damage. The possibility, therefore, exists for using the alkaline elution procedures we have developed in the mouse to monitor human sperm for DNA breakage that may be correlated with genetic damage.

29489 (ORNL—6021, pp 127) **Lack of effect of DBCP on the mouse testis.** Oakberg, E.F.; Cummings, C.C. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

A reduction in sperm count in men exposed to DBCP 91,2-dibromo-3-chloropropane) has been indicated in several publications, and testicular atrophy and dominant lethals have been demonstrated in rats. No effect of DBCP was observed here in mice on the spermatogonial and primary-spermatocyte populations.

29490 (ORNL—6021, pp 133-138) **Systemic toxicology.** Witschi, H.R.; Smith, L.H.; Sigler, C.A.; Morse, C.C.; Martin, F.; Tryka, A.F.; Sendelbach, L.; Stephens, T.J.; Whitaker, M.J.; Goad, M.E. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Work reported here centers around three themes: elucidation of mechanisms of acute and chronic lung injury, evaluation of acute and chronic effects of products associated with synfuel technologies, and validation of the mouse lung tumor assay as a potential short-term in vivo screening assay for suspected carcinogens. In addition a series of new experiments are reported on the effects of the antioxidants butylated hydroxytoluene and butylated hydroxyanisole as modifiers of tumor development in mouse lungs.

29491 (ORNL—6021, pp 138-141) **Induction and progression of neoplasia in tracheal epithelium.** Marchok, A.C.; Phipps, L.H.; Martin, D.H.; Wasilenko, W. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

It has been found that the ability of cells to survive the pyruvate deprived medium is a very early marker of carcinogen-induced alterations. It has been determined that pyruvate does not act on normal cells by directly stimulating cell proliferation. However, cells increasingly terminally differentiate toward keratinization and are lost. Normal tracheal cells take up at least 5 times more [^{14}C] pyruvate than carcinogen-altered cells. Carcinogen-altered cells utilize more [^{14}C]-alanine than normal cells. These findings point out the marked changes in metabolism that occur early in carcinogen-altered cells.

29492 (ORNL—6021, pp 141-144) **Inhalation toxicology.** Lock, S.; Stenglein, F.J. Jr. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The work with the diesel fuel aerosols was undertaken to look at the acute effects following single exposure and to study the relative importance of concentration, duration of exposure and frequency of exposure when animals were exposed a total of nine times. The overall conclusion was that low concentrations of diesel fuel aerosol had minimal effects on any of the parameters measured. However, there were some concentration related trends including slower growth with increasing aerosol concentration and changes in certain lung volumes immediately postexposure. The current threshold limit value (TLV) for ethylene oxide (EtO) has been set by OSHA at 50 ppM, but because of health problems associated with exposure to EtO, there are movements to lower the TLV to 1 ppM with a 5 ppM ceiling. One interest is whether EtO can cause mutations or other toxic effects on the hematopoietic system. Male C57BL/6 mice were exposed to 255 ppM (+- 10 ppM) EtO, 6 hours/day, 5 days/week for up to 10 weeks. While no significant mutagenic effects were observed there were some important changes in various cell populations. These changes included loss of granulocytic elements in bone marrow at early time points followed by replacement and hyperproliferation, and a significant depression in lymphocytes in the peripheral blood.

29493 (ORNL—6021, pp 147-148) **Dosimetry of PAH in skin carcinogenesis.** Shugart, L.R.; Holland, J.M.; Chastain, B.H.; Kao, J.Y. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

Subsequent to topical application of BaP to mouse skin, metabolic activation occurs forming stereospecifically chemically reactive diol epoxides (DE). The primary adduct formed via BaPDE with DNA is anti-BaPDE/deoxyriboguanosine, and there is good correlation between the amount of BaPDE bound to DNA of mouse skin and the carcinogenic activity of BaP. It has been demonstrated that tetrols liberated from BaPDE/DNA adducts by acid hydrolysis are easily quantified by HPLC and fluorescence detection. The mouse skin, in organ culture, has been used to demonstrate its suitability for testing the effect of ellagic acid on adduct formation. Recent studies have shown that ellagic acid inhibits the mutagenicity of anti-BaPDE in Salmonella typhimurium as well as the mutagenic and cytotoxic effects of the compound in Chinese hamster cells, without any detectable harmful activity by itself.

29494 (ORNL—6021, pp 180-182) **Effects of androgens and antiandrogens on the induction of mouse skin papillomas by phorbol ester tumor promoters.** Davidson, K.A. Jan 1984. NTIS, PC A12/MF A01. Order Number DE84006248. TI84006248

In Biology Division. Progress report, August 1, 1982-September 30, 1983.

The skin is a target organ for androgenic steroids. These steroids stimulate cell proliferation in the epidermis and sebaceous glands. Cyproterone acetate (CPA) is a progestin that has antiandrogenic activity. CPA and other antiandrogens block the stimulatory effects of androgens on cell proliferation in the skin. This study evaluates if CPA can inhibit the production of papillomas induced by 12-O-tetradecanoylphorbol-13-acetate (TPA) and studies the influence of host factors (androgens) as modulators in the induction of papillomas.

29495 (ORNL/EIS—203) **Problem definition study of dimethyl sulfoxide (DMSO) and interactive health effects with other chemicals. Final report.** Smith, L.H.; Opresko, D.M.; Holleman, J.W.; Ross, R.H. (Oak Ridge National Lab., TN (USA)). Aug 1983. Contract AC05-84OR21400. 164p. NTIS, PC A08/MF A01; 1; GPO Dep. Order Number DE84011586.

Portions are illegible in microfiche products.

The major objective of this report is to identify and define, from an evaluation of the available literature, the interactive effects of dimethyl sulfoxide (DMSO) with other chemicals. Both percutaneous and nonpercutaneous routes of exposure are considered, and the chemical agents that are discussed are grouped together by function or effect (e.g., hepatotoxins, anticholinesterases, carcinogens, mutagens, steroids, cytotoxic agents). This discussion is preceded by (1) an overview of the chemistry and physical properties which allow DMSO to function as a super solvent, (2) a brief description of the available techniques for monitoring DMSO in environmental and biological media, and (3) a review of the known and potential toxic effects of DMSO in experimental animals and humans. The report also contains a summary of the regulatory actions which govern the industrial, experimental and therapeutic uses of DMSO. 276 references, 9 figures, 4 tables.

29496 (PB—84-154178) **Safety information profile: overview of building construction, including the use of insulating materials.** Hunt, D.B. (Radian Corp., Salt Lake City, UT (USA)). Apr 1979. 59p. NTIS, PC A04/MF A01.

A safety information profile for the building construction industry, including the use of insulation materials, (Standard Industrial Classifications 15 and 17) is presented. Major areas of construction within each SIC code are described. Potential safety, chemical, and physical hazards are reviewed, and existing controls are discussed. Available accident and illness statistics are presented. Industry growth trends are described. Current federal, industrial, and national consensus standards are described. Names and addresses of industries, associations, unions, and other interested parties are provided. It is concluded that this industry has a historically high rate of injury and illness, and further study is needed to determine causes and prevention. Engineering controls are considered to be the most effective prevention methods. Also recommended is the use of personal protective clothing and equipment.

29497 (PB—84-155563) **Analysis and assessment of incinerated municipal sludge ashes and leachates. Final report, Oct 79-Sep 81.** Theis, T.L.; McKiernan, M.; Padgett, L.E. (Notre Dame Univ., IN (USA)). Feb 1984. 102p. NTIS, PC A06/MF A01.

Research was conducted to analyze the physical and chemical properties of ashes from incinerated municipal sludge and of corresponding dewatered sludge. Samples were gathered from 10 wastewater treatment plants ranging in size from 0.22 to 27.1 cu/sec. These samples were subjected to a series of physical, chemical, and biological tests, including batch and chemical extractions and

the Ames Salmonella assay. Results showed that the addition of supplemental chemicals during wastewater or sludge treatment strongly influenced the leachate properties and composition of both dewatered sludge and ash samples. In the absence of inorganic chemical addition, incineration acted generally to decrease trace metal availability. The behavior of arsenic during the various leaching tests was the opposite of that for metal cations with respect to pH. Incinerated sludges demonstrated weak mutagenic activity in the Ames assay. Four of the 10 ash samples gave positive results, generally in the presence of activating mammalian enzymes. In addition, one dewatered sludge sample also gave positive results . Both frameshift and base-pair mutagens were implicated.

29498 **(PB—84-158617) Avoidance responses of estuarine fish to sulfur dioxide. Final report.** Hall, L.W. Jr; Margrey, S.L.; Graves, W.C. (Johns Hopkins Univ., Laurel, MD (USA). Applied Physics Lab.). Dec 1983. 27p. NTIS, PC A03/MF A01.

This study was designed to determine the avoidance responses of juvenile striped bass, Morone saxatilis, and Atlantic menhaden, Brevoortia tyrannus exposed to sulfur dioxide (sulfite) at acclimation temperatures of 15, 20, 25 and 30C. Predictive models were developed and compared for each species at each acclimation temperature. Acclimation temperature was an important factor influencing the avoidance response of each species exposed to sulfur dioxide. Both species avoided approximately the same concentration of sulfite at 25C. Atlantic menhaden avoided lower concentration of sulfur dioxide than striped bass at 30C.

29499 **(PNL-SA—11829) Usefulness of the lipid index for biouptake studies with Daphnia magna.** Dauble, D.D.; Klopfer, D.C.; Carlile, D.W.; Hanf, R.W. (Pacific Northwest Lab., Richland, WA (USA)). Apr 1984. Contract AC06-76RL01830. 16p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011904.

Adult Daphnia magna were starved and monitored for lipid content and brood production. Mean lipid index values declined for 72 hours to less than 50% of 24 hour values. Number of hatched young was inversely related to lipid storage and ovary production. Uptake kinetics of ^{14}C-labelled quinoline was compared between two daphnid test groups with mean lipid scores of 5.4 and 2.8, respectively. Total ^{14}C counts were significantly higher for the high lipid group at 8 hour. Our studies indicated that lipid reserves of daphnid test populations can be routinely monitored as an indicator of environmental stress.

29500 **(UCID—19993) Pollutant body burdens and reproduction in Platichthys stellatus from San Francisco Bay. Annual progress report, year I.** Spies, R.; Rice, D.; Ireland, R.; Beach, J. (Lawrence Livermore National Lab., CA (USA)). Aug 1983. Contract W-7405-ENG-48. 40p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011073.

The effects of sublethal levels of pollutants in the tissues of estuarine fish on reproductive success were determined. The relationships among several measures of reproductive success (percent fertilization, hatching success, abnormal larvae) and biochemical measures of pollutant exposure (induced mixed-function oxidase) as well as direct measures of chemical pollutants in tissues were examined. Populations were sampled during active gametogenesis and during the spawning season. Tissues have been preserved for pollutant analyses. The reproductive success of captured spawning females was evaluated, and mixed-function oxidase (MFO) activity measured in captured fish. The results indicate the reproductive success of starry flounder in San Francisco Bay is being impaired by organic pollutants. 14 references, 8 figures, 11 tables.

29501 **Barley growth in coal liquid and diesel liquid fuels from coal and oil: a comparison of potential toxic effects on barley.** Warner, M.L.; Sauer, R.H.; Carlile, D.W. (Pacific Northwest Lab., Richland, WA). *Water, Air, and Soil Pollution;* **22**: No. 1, 47-55(Jan 1984). Contract AC06-76RL01830.

The production of new liquid fuels from coal creates the potential for environmental releases of new products and waste materials via spills or leaching of material from waste storage areas. The chemical composition of these products and waste materials suggests possible toxic effects upon exposed plants and animals. In this study, barley was grown in field lysimeters containing three concentrations (0.07, 0.74, 7.421 m^{-3} equivalent to 80, 800. 8000 gal/acre, respectively) of a sample product blend of Solvent Refined Coal (SRC) heavy and middle distillates. Three methods of soil amendment simulated possible spill clean-up alternatives: adding the coal liquid as a surface layer, as a subsurface layer covered by uncontaminated soil, or intermixed with the top 1 dm of soil. To permit comparison of the coal liquid with familiar commercial material, the study protocol was followed simultaneously in lysimeters amended with #2 diesel fuel. Statistically significant reductions in grain yield were observed for both the SRC and diesel materials for all methods of soil amendment at concentrations equivalent to 0.74 and 7.421 m^{-3}, and for the SRC material only when mixed with soil at a concentration equivalent to 0.071 m^{-3}. Where differences between fuel types were observed, the coal liquid was consistently more toxic.

29502 **Plant uptake assay to determine bioavailability of inorganic contaminants.** Dreesen, D.R.; Cokal, E.J. (Los Alamos National Lab., NM). *Water, Air, and Soil Pollution;* **22**: No. 1, 85-93(Jan 1984). Contract W-7405-ENG-26.

A laboratory technique has been developed to rapidly assess the potential uptake of contaminants by plants growing into waste burial sites. A soil-less planting media was used to provide rapid plant growth and reproducible growing conditions. The uptake of contaminants by several plant species grown on uranium mill tailings materials has been examined. The bioavailability of Mo, Se, Cl, and other trace metals in tailings was greater than in a surface soil from a uranium mining area. Significant differences in nutrient and contaminant contents in aboveground biomass were found between species.

29503 **Flooding and SO_2 stress interaction in Betula papyrifera and B. nigra seedlings.** Norby, R.J.; Kozlowski, T.T. (Oak Ridge National Lab., TN). *Forest Science;* **29**: No. 4, 739-750(Dec 1983). Contract W-7405-ENG-26.

The effects of flooding of soil for 5 weeks and fumigation of shoots with 0.35 ppm SO_2 for 30 hours, alone and in combination, were studied on Betula papyrifera Marsh. (paper birch) and Betula nigra L. (river birch) seedlings. B. papyrifera, an upland species, was adversely affected by flooding more severely than B. nigra, a lowland species. Symptoms of flooding injury in both species included stomatal closure, chlorosis, deterioration of root systems, and greatly reduced dry matter accumulation. Flooding induced formation of hypertrophied lenticels and adventitious roots in B. nigra but not B. papyrifera seedlings. Seedlings of both species recovered 1 to 2 wk after flooding ended and continued growing at a faster rate than unflooded seedlings, thereby partially or completely compensating for the growth-inhibiting effects of flooding. Fumigation with SO_2 at the end of the flooding period induced partial stomatal closure, injury to leaves, and reductions in mean relative growth rates in both species. Stomatal conductance and SO_2 uptake in B. nigra seedlings were reduced 40 to 45 percent by flooding, respectively, and consequently SO_2 caused less visible injury (17 vs. 44 percent of leaf area) and less growth inhibition (0 vs. 26 percent in mean relative root growth rate) in flooded than in unflooded seedlings. Stomatal conductance and SO_2 uptake were reduced even more in flooded B. papyrifera (75 and 77 percent, respectively), yet flooded and unflooded seedlings were similarly affected by SO_2. Flooding stress apparently affected mechanisms of pollution avoidance and pollution tolerance differently in the two species.

29504 **In vitro and in vivo response after exposure to man-made mineral and asbestos insulation fibers.** Pickrill, J.A.; Hill, J.O.; Carpenter, R.L.; Hahn, F.F.; Rebar, A.H. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). *American Industrial Hygiene Association Journal;* **44**: No. 8, 557-561(Aug 1983). Contract AC04-76EV01013.

The relative in vitro and in vivo toxicity of several types of manufactured fibrous glass insulation and crocidolite asbestos was investigated to aid in selection of a suitable glass fiber for subsequent use in inhalation exposures. The in vitro cytotoxicity to pulmonary alveolar macrophages of small glass fibers from microfiber insulation (count median diameter (CMD) ~ 0.1-0.2 μm) was greater than that of the larger fibers from household insulation (CMD ~

2.4 μm). To screen for in vivo pulmonary toxicity, 2-21 mg of glass or asbestos fibers were administered in divided doses to male Syrian hamsters by intratracheal instillation. Animals were sacrificed at 1, 3.5 and 11 months following initial administration of material. One type of glass microfiber count median diameter (CMD) ~ 0.1 μm caused deaths from pulmonary edema at early times after instillation. High levels of asbestos, a second glass microfiber (CMD ~ 0.2 μm) and one type of household insulation fiber (CMD 2.3 μm) all resulted in increases in total collagen and mild pulmonary fibrosis at later times after instillation, although microfiber insulation produced a greater response than household insulation. Asbestos insulation produced the greatest response. A five-day inhalation exposure to a high level of glass microfibers deposited in lung <10 percent of the lowest instilled amount which elicited indications of lung injury. This amount did not produce significant biological changes at 1 to 12 months after exposure. 20 references, 4 figures, 2 tables.

29505 **Impact of ozone on soybean yield.** Kress, L.W.; Miller, J.E. (Argonne National Lab., IL). *Journal of Environmental Quality;* **12**: No. 2, 276-281(Apr-Jun 1983).

Field-grown soybeans [glycine max (L.) Merr., cv. Corosoy] were exposed to O_3 for 7 h daily (0900-1600 CST) for 56 d in open-top chambers. The air in the chambers was either charcoal-filtered or non-filtered, with various constant amounts of O_3 added. The randomized block design incorporated four replicates of six treatments: no chamber (0.042 ppm O_3 seasonal 7-h average); chamber with charcoal-filtered air (0.022 ppm O_3); and chambers with non-filtered air plus added O_3 to provide concentrations of 0.042, 0.064, 0.089, and 0.115 ppm. A linear reduction seed weight per plant with increasing ozone dose (b(slope) = -87.18) was significant (P = 0.01), and yields were reduced 5, 23, 39, and 52% for the 0.042, 0.064, 0.089 and 0115 ppm O_3 treatments, respectively, compared with the 0.022 ppm treatment. Significant (P = 0.01) linear reductions were also noted for filled pods per plant (b = 184.4), seeds per filled pod (b = -0.9955), weight per seed (b = -0.3794), and percent oil content (b = -12.33). Significant (P = 0.01) linear increases were noted for unfilled pods per plant (b - 58.11) and percent protein content (b = 20.58). A comparison of the open plots with the nonfiltered air chamber plots provided with the same concentration of O_3 revealed no significant chamber effect.

29506 **Quality of tomatoes harvested from plants receiving chronic exposures to sulfur dioxide.** Lotstein, R.J.; Davis, D.D.; Pell, E.J. (Pennsylvania State Univ., University Park). *HortScience;* **18**: No. 1, 72-74(1983).

Potted plants of 'Merit' tomato (Lycopersicon esculentum Mill.) were grown from seed to maturity in controlled-environment chambers and exposed to charcoal-filtered air or 288-314 μgm^{-3} (0.11-0.12 ppm) SO_2 during weeks 1-5, 6-10, or 1-10 beginning about one week after transplanting. Red ripe fruit harvested from plants exposed to SO_2 exhibited a slight but significant decrease in ascorbic acid expressed on a dry-weight basis. SO_2 induced significantly greater levels of foliar sulfur, but did not increase sulfur content of the fruit. Exposure of plants to SO_2 did not affect fruit yield or quality factors including soluble solids, total solids, or ascorbic acid on fresh-weight basis. A multiple regression model revealed low but significant R^2 values, indicating a weak and indirect, yet significant, association between plant sulfur content and fruit ascorbic acid.

29507 **Effects of SO_2 on stomatal metabolism in Pisum sativum L.** Rao, I.M.; Amundson, R.G.; Alshcer-Herman, R.; Anderson, L.E. (Univ. of Illinois, Chicago). *Plant Physiology, Supplement;* **72**: 573-577(1983).

Pea (Pisum sativum L. cv 'Little Marvel') plants were exposed to SO_2 for short term (3 hours) and long term (2 days) at 0.2 and at 0.5 microliter per liter (ppm) levels. The effect of this treatment on the activity of phosphoenolpyruvate carboxylase, NAD- and NADP-malate dehydrogenases, and alanine aminotransferase from epidermis and whole leaves was investigated. Short-term exposure to SO_2 at 0.2 or 0.5 ppm decreased the activity of the carboxylase and the dehydrogenases in the epidermis. In contrast, the activity of the same three enzymes increased in whole leaves with either short- or long-term exposure to SO_2. Alanine aminotransferase in epidermis or whole leaves was not much affected by short-term exposure, but the epidermal activity was decreased and whole leaf activity was increased with long-term exposure. SO_2 exposure which was initiated prior to illumination decreased the free thiol content of both epidermis and of whole leaf. Net photosynthesis was reversibly inhibited by long-term exposure to SO_2 at 0.5 ppm. No effect of 0.5 ppm SO_2 on stomatal conductance was detectable after 3 hours. Stomatal conductance appeared to decrease after longer exposure times (2 days) at 0.5 ppm.

29508 **Inhalation of 1-nitropyrene associated with ultrafine insoluble particles or as a pure aerosol: comparison of deposition and biological fate.** Sun, J.D.; Wolff, R.K.; Aberman, H.M.; McClellan, R.O. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Toxicology and Applied Pharmacology;* **69**: 185-198(1983). Contract AC04-76EV01013.

The direct-acting mutagen, [^{3}H]nitropyrene (^{3}H-NP), was used as a model nitroaromatic compound. Rats were exposed to this radiolabeled compound by nose-only inhalation either as a coating (~ 6% by mass) on relatively inert, ultrafine $^{67}Ga_2O_3$ particles or as a homogenous ultrafine aerosol. The tissue deposition, retention, and biological fate of each aerosol were investigated and compared. Respiratory tract clearance of ^{3}H radioactivity from each exposure was very rapid with no apparent differences seen in the lung retention of this inhaled compound between each exposure over the course of these studies. Higher ^{3}H-radioactivity levels were seen in stomach and large intestines of rats exposed to the $^{67}Ga_2O_3$-associated ^{3}H-NP than in the same tissues from rats exposed to the pure ^{3}H-NP aerosol. Rats exposed to the ^{3}H-NP-$^{67}Ga_2O_3$ aerosol excreted the majority of the deposited ^{3}H radioactivity in the feces (75 +/- 18%), whereas pure ^{3}H-NP exposed animals excreted a major portion of the radiolabel in the urine (76 +/- 18%). It appeared that the major portion of the pure ^{3}H-NP aerosol was cleared from the respiratory tract by direct absorption into blood, while the $^{67}Ga_2O_3$-associated ^{3}H-NP was cleared by both blood absorption and mucociliary clearance followed by ingestion and fecal excretion. The differences in the deposition and biological fate between the particle-associated NP and the pure NP aerosol may have important implications in terms of the metabolic fate of inhaled nitroaromatic compounds and the health risks associated with human exposures to particulate environmental pollutants that contain this class of compounds.

29509 **Site specific cleavage of θX-174 replicative form DNA after modification by N-acetoxy-N-2-acetylaminofluorene.** Bases, R.; Mendez, F.; Mendez, L. (Albert Einstein Coll. of Medicine, Bronx, NY). *Carcinogenesis (New York);* **4**: No. 11, 1445-1450(1983). Contract AC02-83ER60160.

Three kinds of structural disturbances were found in an 88 base pair (bp) fragment of θX-174 DNA after exposure to N-acetoxy-N-2-acetylaminofluorene (N-Aco-AAF). Frequent strand scissions at two specific guanine sites on the 5′ ^{32}P-end-labeled fragment were identified by base sequence analysis. Scissions at these two sites were induced at neutral pH and they were not increased by treatment with apurinic endonuclease. They are an immediate consequence of N-Aco-AAF action and are not primarily apurinic sites. Alkali treatment with 1 M piperidine at 90°C induced strand scissions at every guanine, demonstrating adduct slices, depurination and strand scissions. Addicted DNA was sensitive to single-strand specific nuclease digestion, suggesting unwound DNA. These studies indicate the predilection of N-Aco-AAF for certain DNA sites and they suggest three kinds of DNA modifications which can be expected after adduction by this carcinogen. Some of the sites may be premutational carcinogen-induced DNA structural modifications.

29510 **Ocular toxicity of 2,2,2-trifluoroethanol in rabbits.** Marshall, T.C.; Hahn, F.F.; Merickel, B.S.; Hobbs, C.H. (Inhalation Toxicology Research Inst., Albuquerque, NM). *Fundamental and Applied Toxicology;* **1**: No. 7-8, 313-318(Jul-Aug 1981). Contract AC04-76EV01013.

Three commercial formulations of 2,2,2-trifluoroethanol (TFE) were applied to eyes of rabbits and evaluated for their potential to cause ocular damage. All three products were severe eye irritants and water irrigation shortly after exposure was not effec-

tive in reducing ocular damage. Gross and histological observations revealed marked conjunctivitis, moderate to severe ulcerative keratitis, and hyperemia and edema of the iris, all of which showed evidence of resolution over the three-week course of investigation. However, complete reversal of all effects was not attained. TFE and its commercial formulations should be viewed as potentially severe human ocular irritants.

29511 **Increase of sister chromatid exchanges and perturbations of cell division kinetics in human lymphocytes by benzene metabolites.** Morimoto, K.; Wolff, S. (Univ. of California, San Francisco). *Cancer Research;* **40**: 1189-1193(Apr 1980).

Benzene, which has been associated with human cancers, is metabolized to produce several major metabolites that could be responsible for the biological effects. Tests have now been carried out on human lymphocytes in culture to determine if benzene or its metabolites, phenol, catechol, and hydroquinone, induce cytogenetic changes and affect the cell cycle. The results indicate that benzene itself does not induce sister chromatid exchanges or affect cell cycle kinetics over a wide range of doses. Catechol is a potent compound that induces sister chromatid exchanges and delays cell division very readily. Hydroquinone is also potent, but less so than catechol. Thus, the formation of catechol and hydroquinone is the most likely cause of benzene toxicity.

57 HEALTH AND SAFETY

29512 **(LBL-PUB—3040) Incidental Crane Operator's Manual: Environmental Health and Safety Department.** (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 42p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012313.

Portions are illegible in microfiche products.

This manual includes discussions on DOE standards, LBL requirements, terminology, operating procedures, errors, and basic rules. (ACR)

29513 **(ORAU—226) Annual report to the Office of Nuclear Safety, Fiscal Year 1983.** (Oak Ridge Associated Universities, Inc., TN (USA)). May 1984. Contract AC05-76OR00033. 16p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012566.

The report presents brief descriptions of Oak Ridge Associated Universities (ORAU) programs supporting the Office of Nuclear Safety (ONS) in the areas of environment, health and safety. Programs include technical support, technical seminars, support of Training Resources and Data Exchange (TRADE) Committee, assistance for the comprehensive appraisal of DOE field offices, technical assistance to the Office of Operational Safety (OOS), technical assistance to Defense Programs, and technical assistance to field offices. (ACR)

29514 **Risk of energy technologies.** Etnier, E.L.; Travis, C.C. (Oak Ridge National Lab., TN). *Nuclear Safety;* **24**: No. 5, 671-677(Sep-Oct 1983).

This article briefly reviews health risk estimates presented in the book, Health Risks of Energy Technologies, sponsored by the American Association for the Advancement of Science. State-of-the-art estimates of the occupational and public health risks associated with nuclear and coal power generation are presented as well as those associated with some of the less conventional energy technologies, including solar power, biomass, and geothermal. Public perception of risk, philosophical attitudes toward risk, and the global ramifications of risk are also discussed. When judged solely on the basis of fatalities and injuries during normal operation and maintenance, it appears that nuclear power produces the least health impact and coal-fired power plants the highest, with the renewable technologies ranging between the two.

29521 (DOE/ER/13124—1) Structural evolution of the Central Brooks Range, Alaska. Progress report, September 1, 1983-April 10, 1984. Ave Lallemant, H.G. (Rice Univ., Houston, TX (USA)). 1984. Contract AS05-83ER13124. 112p. NTIS, PC A06; 3; GPO Dep. Order Number DE84011617.

Paper copy only, copy does not permit microfiche production.

The primary emphasis during the 1983 field season was placed on detailed mapping and structural and stratigraphic analysis of an area near the headwaters of the Hammond River in the Doonerak window. Similar work was started near Coldfoot in the schist and ophiolite belts of the southern foothills of the Brooks Range. A third area north of Anaktuvuk Pass was analyzed in conjunction with a U.S.G.S. project. We started also to analyze seismic reflection profiles from the N.P.R.A. Our preliminary data strongly suggest that the Lower Paleozoic rocks were not deformed during the Innuitian; all generations of structures in the Lower Paleozoic were also found in the younger rocks and were formed during the Juro-Cretaceous Brookian event. The Upper Devonian clastic wedge in the Doonerak area was probably deposited on the southern flank of a foredeep, too far away from the Innuitian fold and thrust belt. All Brookian structures are compatible with one period of north-directed thrusting. The Lower Paleozoic rocks were involved in the thrusting and the antiformal nature of the Doonerak area is the result of the formation of a duplex structure. Structures in the metamorphic rocks of the southern Brooks Range are all correlatable to the ones in the Doonerak area and were thus formed during the Juro-Cretaceous. The so-called ophiolite belt is much less penetratively deformed but was also emplaced by northward thrusting. Major structures in the Anaktuvuk area were formed by northward thrusting, but a distinct EW shortening event has occurred in later times. This EW compression has also been identified in the Doonerak area. 6 references.

29522 Piston corers for peat and lake sediments. Wright, H.E. Jr.; Mann, D.H.; Glaser, P.H. (Univ. of Minnesota, Minneapolis). *Ecology;* **65**: No. 2, 657-659(Apr 1984).

Two pistons corers are described which are successful in cuting the wood or undecomposed fibrous peat that characterizes many peat deposits. These modified corers are equipped with a serrated cutting edge, along with modifications to permit the core tube to be rotated back and forth, so that undecomposed fibers and roots can be cut. Complete sections of peat and even the underlying silt or sand can be acquired to a depth of several meters. The 10-cm diameter corer provides sufficient material for close-interval macrofossil and chemical analysis and for radiocarbon dating. The 5-cm corer is more portable and more convenient.

29523 (AD-A—137816/5) Geophysical methodology studies for military groundwater exploration. Final report, Aug 82-Aug 83. Romig, P.R.; Rodriguez, B.D.; Powers, M.H. (Colorado School of Mines, Golden (USA). Exploratory Research Lab.). 31 Jul 1983. 94p. NTIS, PC A05/MF A01.

This report contains the results of geophysical surveys at two sites: White Sands, New Mexico an Fort Carson, Colorado. The geophysical surveys, seismic reflection, seismic refraction, shear wave refraction and reflection, and electrical resistivity, were used in an integrated fashion to detect and assess groundwater potential at a number of locations at each site. The locations presented various geological and groundwater conditions. The results of the surveys varied from fair to good. Factors which contributed to a successful assessment of groundwater potential were: (a) geology consisting of coarse-grained sediments, (b) limited knowledge of geology, and, (c) knowledge of all available geological information. Factors which hindered the assessment of groundwater potential were: (a) geology consisting of fine-grained sediments, (b) complex geology and topography, and (c) no prior knowledge of the geology available. Software developed during this study was designed to allow unskilled military personnel to interpret refraction and reflection data on a small, field-portable microcomputer.

29524 (INIS-BR—106) Aspects of sismo-tectonic stability in the South-Eastern region of Brazil of interest to geology of engineering. Mioto, J.A.; Hasui, Y. (Instituto de Pesquisas Tecnologicas, Sao Paulo (Brazil)). 1982. 8p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780185.

The occurence of earthquakes in Brazil, mainly in the Southeastern region, and its relationship with the geologic features has been discussed by many authors since the beginning of this century. It is difficult to define intraplate seismicity and to understand the actual epirogenic displacent, but the definition of the regional stability is important for enginnering purposes and have been considered through seismologic, morphotectonic and geologic criteria. (Author).

29525 (PB—84-151307) Numerical modeling of ionospheric parameters from global IMS (International Magnetospheric Study) magnetometer data for the CDAW-6 intervals. Kamide, Y.; Kroehl, H.W.; Hausman, B.A.; McPherron, R.L.; Akasofu, S. (World Data Center A for Solar-Terrestrial Physics, Boulder, CO (USA)). Nov 1983. 208p. (UAG—88). NTIS, PC A10/MF A01.

The purpose of this technical report is to present the results of modeling efforts to estimate the distribution of ionospheric electric potential, ionospheric and field-aligned currents, and Joule heating rate from ground-based magnetic records for two intervals; (1) 0600-1800 UT on March 22, 1979, and (2) 1200 UT on March 31 to 0600 UT on April 1, 1979. This global modeling study constitutes one of the major contributions to the Coordinated Data Analysis Workshop (CDAW-6) sponsored by the National Space Science Data Center, NASA.

29526 (USGS-OFR—83-15) Catalog of earthquakes in Southern Alaska. (Geological Survey, Menlo Park, CA (USA)). 1983. 55p. USGS-Open File Service, Box 25425, Denver Federal Center, Denver, CO 80225. Order Number DE84901199.

This earthquake catalog presents origin times, focal coordinates and magnitudes for 1289 shocks as small as magnitude 1.0 occurring in the third quarter of 1980. 19 references, 9 figures, 1 table. (ACR)

29527 Gas emissions and the eruptions of Mount St. Helens through 1982. Casadevall, T.; Rose, W.; Gerlach, T.; Greenland, L.P.; Ewert, J.; Wunderman, R.; Symonds, R. (Cascades Volcano Observatory, Vancouver, WA). *Science (Washington, D.C.);* **221**: 1383-1385(30 Sep 1983). Contract AC04-76DP00789.

The monitoring of gas emissions from Mount St. Helens includes daily airborne measurements of sulfur dioxide in the volcanic plume and monthly sampling of gases from crater fumaroles. The composition of the fumarolic gases has changed slightly since 1980: the water content increased from 90 to 98 percent, and the carbon dioxide concentrations decreased from about 10 to 1 percent. The emission rates of sulfur dioxide and carbon dioxide were at their peak during July and August 1980, decreased rapidly in late 1980, and have remained low and decreased slightly through 1981 and 1982. These patterns suggest steady outgassing of a single batch of magma has been added since mid-1980. The gas data were useful in predicting eruptions in August 1980 and June 1981.

29528 ASP: an automated seismic processor for microearthquake networks. McEvilly, T.V.; Majer, E.L. (Univ. of California, Berkeley). *Bulletin of the Seismological Society of America;* **72**: No. 1, 303-325(Feb 1982). Contract W-7405-ENG-48.

ASP, a low-power, in-field Automated Seismic Processor of microearthquake network data has been designed, fabricated, and deployed for initial operation in four different field areas to monitor seismicity associated with two geothermal areas (The Geysers, California, and Cerro Prieto, Mexico), a nuclear explosion with its related collapse and aftershock sequence, and late (>1 year) activity in a major aftershock series (Livermore, California). A second ASP system, with a high-speed front-end, is used in acoustic emission (1 to 20 k6Hz) analysis for fracture monitoring. Each of the 15 chan-

nels of ASP (configured for up to 128 channels) automatically detects, measures times and amplitudes, and computes and fits FFT's for both the P and S waves on data sampled at 100 samples/sec. These data from each channel are then processed with a central microprocessor for hypocenter location, running b values, source parameters, event count, and P-wave polarities. The system is capable of processing a 15-station detection in approximately 40 sec, excluding printout. The initial trials have demonstrated that in-field real-time analysis of data maximizes the efficiency of microeathquake surveys allowing flexibility in experimental procedures, with a minimum of the traditional labor-intensive postprocessing. Current efforts are directed toward improving efficiency of computation and data output and in expanding software capabilities.

29529 (PB—84-148493) Manual of analytical methods used at Mintek. Special pub. Stoch, H.; Dixon, K. (Council for Mineral Technology, Randburg (South Africa)). 1983. 317p. NTIS, PC E13/MF E01.

The laboratories of the Council for Mineral Technology (Mintek) were founded in 1934. The name of the organization was originally the Minerals Research Laboratory (M.R.L.), which was changed in 1944 to the Government Metallurgical Laboratory (G.M.L.). As the volume of work was large, the relatively small staff of the Analytical Science Division could not undertake research-and-development work on analytical methods. Fortunately, such work was well-documented and tested by several overseas laboratories, the main methods used being volumetric, gravimetric, and photometric. The next phase in the development of the laboratories commenced at about the time (1966) that the G.M.L. became the National Institute for Metallurgy (NIM). The analytical requests became more varied and more complex, and the demands on the Analytical Science Division necessitated a large amount of research-and-development work to provide the staff with adequate methods for the analysis of base metals of economic importance (copper, lead, zinc, manganese, chromium, etc.), the precious metals (platinum, palladium, rhodium, ruthenium, iridium, osmium, gold, and silver), silicates, trace elements in rocks, ferro-alloys and slags, and impurity elements in high-purity metals. In 1981, NIM was renamed Mintek, and its fields of interest have broadended to cover almost every element or material of economic interest to South Africa. This broadening of interest has led to greater demands from metallurgists and engineers for increased accuracy and a wider range of elemental analyses, and, to satisfy these demands, there has been a concomitant increase in the number of analytical methods developed, some of which require sophisticated instruments for multi-element analysis. This manual of approximately 230 methods of analysis is by no means complete, since it includes only those methods that were investigated in some detail and have been published as unrestricted reports.

29532 (CONF-8405155—2) Galactic cycles and their relationship to life on earth. Olson, A.P. (Argonne National Lab., IL (USA)). May 1984. Contract W-31-109-ENG-38. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011737.

From Inner space/outer space conference; Batavia, IL, USA (2 May 1984).

Portions are illegible in microfiche products.

This paper draws attention to episodic events in the geologic time scale of the evolution of life on earth, and discusses potentially cyclic behavior relative to galactic structure. The question is a simple one: Do galactic processes affect the solar system? It is known that the sun is moving at about 220 +- 15 km/sec at a distance of about 8.5 +- 0.5 kpc from the galactic center. This motion, if circular and unperturbed, implies an orbital period of 237 +- 21 My for the solar system around the galaxy. The Milky Way also evidences structure typically interpreted as spiral arms, in the distribution of gas clouds in its central plane. The relative motion of the spiral arms, known as the pattern speed, is about 2/3 that of the sun. Consequently the solar system gains upon and passes through all the structure in its orbital plane once in three rotations or ~700 My. If this structure is persistent over times longer than 700 My, it is clear that the interaction (if any) can be called cyclic. Furthermore, if there is any sub-structure or inner pattern to the 700 My cycle, it may show up as higher harmonics. Age estimates for the Milky Way are 12-15 By, or ~17 to 22 structure cycles of 0.70 By. It seems not unreasonable to expect some persistence of a pattern over a few structure cycles. It must be noted that the pattern speed is quite uncertain. Perhaps geophysical evidence can be used to improve on the nominally 700 My structure cycle which is assumed in this paper. 16 references, 8 figures.

29533 (IC—83/16) Metastable vacuum burning phenomenon. Berezin, V.A.; Tkachev, I.I.; Kuzmin, V.A. (International Centre for Theoretical Physics, Trieste (Italy)). Feb 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701679.

Equations of motion of an interface between two phases with arbitrary equations of state are obtained. It is found that there may take place a process of metastable vacuum burning. It is shown that under some conditions the process of the new phase bubble expansion is described by the detonation wave equations. Possible cosmological consequences of the metastable phase burning effect are briefly discussed.

29534 **(IC—83/17) Fate of superheavy magnetic monopoles in a neutron star.** Kuzmin, V.A.; Rubakov, V.A. (International Centre for Theoretical Physics, Trieste (Italy)). Feb 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701678.

We propose two possible scenarios of the behaviour of superheavy magnetic monopoles in a neutron star, in which the monopole-antimonopole annihilation rate is sufficiently large to prevent the enormous heating of a neutron star due to the monopole induced neutron decays. We find that the galactic monopole flux of order $10^{-16}cm^{-2}s^{-1}ster^{-1}$ can be compatible with the observational limit on the X-ray luminosity of neutron stars.

29535 **(INIS-mf—8371) Spherically symmetric hydrodynamic model calculations on the evolution of interstellar matter and on stellar evolution in the cove of spiral-galaxies.** Loose, H.H. (Goettingen Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 9 Jul 1981. 107p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780167.

A numerical model is presented for a galactic core with radial symmetry, describing the mechanism of repeated bursts of stellar evolution. Repeated burst occur under the condition that energy is transfered by stellar winds and supernovae explosions from the massive stars, formed in the bursts at high gas pressures, to the interstellar medium. Thus the gas component of the model core expands until massive stars are no longer available. The following contraction of the gas distribution, caused by energy dissipation, results in a new burst, thus starting a new evolutional cycle. In the numerical model a large part of massive stars results in a high production rate for turbulent kinetic energy, so that a repeated excitation of bursts becomes possible.

29541 **(JINR—E-2-82-386) Antiproton interaction with ^{4}He as a test of GUT cosmology.** Chechetkin, V.M.; Khlopov, M.Yu.; Zeldovich, Ya.B.; Sapozhnikov, M.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701680.

A new possibility of checking some GUT models is suggested, basing on the analysis of their cosmological consequences and the experimental study of the anti p^{4}He interaction. The study of annihilation of antiprotons with ^{4}He may provide limits on the possible amount of antimatter in the early Universe, limits on the probability of formation of primordial black holes and restrictions on the GUT parameters determining the properties of domains of antimatter.

29542 **Spontaneously broken global symmetries and cosmology.** Shafi, Q.; Vilenkin, A. (Bartol Research Foundation, of the Franklin Institute, University of Delaware, Newark, Delaware 19716). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 8, 1870-1871(15 Apr 1984). Contract AC02-78ER05007.

Phase transitions associated with spontaneously broken global symmetries, in case these occur in nature, can have important cosmological implications. This is illustrated through two examples. The first one shows how the spontaneous breaking of a global U(1) symmetry, present, for instance, in the minimal SU(5) model, can lead to an inflationary phase. The second example illustrates how topologically stable strings associated with the breaking of U(1) symmetry make an appearance at (or near) the end of the inflationary era.

29543 **Strength of ice.** *Energy Technology Review;* 1-13(Apr 1984).

In order to model the evolution and current state of Callisto and Ganymede (Jupiter's two largest moons), which are similar in mass, density, temperature, and apparent composition (about 75% ice by volume) but different in appearance, we are studying the flow properties of ice under extreme conditions. With our new testing apparatus, we have determined that ice is very much weaker at low temperatures (below 160 K) than had been believed. This finding partially explains some of the unusual features found on these Jovian moons, although many questions are still being investigated.

29544 **Dimensional reduction in the early universe: Where have the massive particles gone.** Kolb, E.W. (Fermi National Accelerator Lab., Batavia, IL); Slansky, R. (Los Alamos National Lab., NM). *Physics Letters,* [*Section*] *B;* **135**: No. 5/6, 378-382(16 Feb 1984).

In many models based on reduction from greater than four dimensions, there are absolutely stable particles with masses of order R^{-1} (R is the compactification scale). If the temperature of the universe were ever close to R^{-1}, these massive states would have been present and some would have survived annihilation. We calculate the present mass density due to these particles and find both the five-dimensional model and some versions of $N = 8$ supergravity to be unacceptable. We discuss some possible solutions to this problem.

6402 Atmospheric Physics

29545 **(AD-A—137399/2) Plasma sheet boundary layer. Scientific report 1978-1979.** Eastman, T.E.; Frank, L.A.; Peterson, W.K.; Lennartsson, W. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). Mar 1983. 60p. NTIS, PC A04/MF A01.

The plasma-sheet boundary layer is a temporally variable transition region located between the magnetotail lobes and the central plasma sheet. We have made a survey of these regions using particle spectra and three-dimensional velocity-space distributions sampled by the ISEE-1 LEPEDEA. Ion composition measurements obtained by the Lockheed ion mass spectrometers indicate that ionospheric ions play a crucial role in magnetotail dynamics. Eleven crossings from the lobes to the central plasma sheet taken at various local times and levels of geomagnetic activity are analyzed in

detail. The average ratios of He(+)/H(+), He(++)/H(+) and O(+)/H(+) are not significantly different between the plasma-sheet boundary layer and central plasma sheet. Intense antisunward-flowing beams of ionospheric origin at E/q of < 1 kV are often seen in the tail lobes, the plasma-sheet boundary layer and, infrequently, in the central plasma sheet. Such beams are not commonly observed in the central plasma sheet which is characterized by hotter and more isotropic ion and electron distributions. Our samples of ion distributions in the plasma-sheet boundary layer frequently show an evolution of distribution functions from highly anisotropic single beams or counter-streaming beams towards the more isotropic distributions typical of the hot component of the central plasma sheet. Provided that the acceleration process for these beams can be identified, we can then account for the transport and injection of hot plasma into the central plasma sheet. We conclude that the plasma-sheet boundary layer is a primary transport region of the magnetotail.

29546 **(FRNC-TH—1352) Experimental study of diffuse auroral precipitations.** Mouaia, K. (Toulouse-3 Univ., 31 (France)). 1983. 116p. (In French). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84750663.

First chapter is devoted to low energy electron precipitation in the evening sector of the auroral magnetosphere, during quiet and disturbed magnetic periods. Four subjects are studied in detail: the latitude distribution of the varied auroral forms and their relations to external magnetosphere; the time coefficients related to precipitations, the form and the dynamic of the diffuse precipitation equatorial frontier; the precipitation effect on the ionosphere concentration. The last part of the chapter shows that the plasma convection in the magnetosphere, associated to wave-particle interactions near the equatorial accounts for the principal characteristics of the evening sector diffuse electronic precipitations. The second chapter deals with subauroral precipitations of low energy ions, after the magnetospheric substorms, in the high latitude regions of the morning sector.

29547 **(LA-UR—84-1199) Electron velocity distributions near collisionless shocks.** Feldman, W.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 40p. (CONF-840256—3). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011352.

From Chapman conference on collisionless shock waves in the heliosphere; Napa Valley, CA, USA (20 Feb 1984).

Portions are illegible in microfiche products.

Recent studies of the amount of electron heating and of the shapes of electron velocity distributions across shocks near the earth are reviewed. It is found that electron heating increases with increasing shock strength but is always less than the ion heating. The scale length of electron heating is also less than that for the ions. Electron velocity distributions show characteristic shapes which depend on the strength of the shocks. At the weaker shocks, electron heating is mostly perpendicular to the ambient magnetic field, bar B, and results in Gaussian-shaped velocity distributions at low-to-moderate energies. At the stronger shocks, parallel heating predominates resulting in flat-topped velocity distributions. A reasonable interpretation of these results indicates that at the weaker shocks electron heating is dominated by a tendency toward conservation of the magnetic moment. At the stronger fast-mode shocks, this heating is thought to be dominated by an acceleration parallel to bar B produced by the macroscopic shock electric field followed by beam driven plasma instabilities. Some contribution to the heating at the stronger shocks from conservation of the magnetic moment and cross-field current-driven instabilities cannot be ruled out. Although the heating at slow-mode shocks is also dominated by instabilities driven by magnetic field-aligned electron beams, their acceleration mechanism is not yet established.

29548 **(LA-UR—84-1391) Ion reflection, gyration, and dissipation at supercritical shocks.** Gosling, J.T.; Robson, A.E. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 35p. (CONF-840256—2). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011353.

From Chapman conference on collisionless shock waves in the heliosphere; Napa Valley, CA, USA (20 Feb 1984).

This brief review emphasizes the following points: (1) Ion reflection is the dominant ion dissipation mechanism at nearly perpendicular, supercritical shocks. (2) An increasing fraction of the ions incident on a supercritical shock is reflected as the Mach number increases. The actual fraction reflected can be predicted using the Rankine-Hugoniot conservation relations. (3) The effective temperature associated with the dispersion in velocity space associated with ion reflection accounts for a large fraction of the temperature rise observed across supercritical, quasi-perpendicular shocks.

29549 **(UCRL—88711) Dynamic characteristic of intense short microwave propagation in an atmosphere.** Yee, J.H.; Alvarez, R.A.; Mayhall, D.J.; Madsen, N.K.; Cabayan, H.S. (Lawrence Livermore National Lab., CA (USA)). Jul 1983. Contract W-7405-ENG-48. 26p. (CONF-830314—7). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84002788.

From 2. national conference on high power microwave technology; Adelphi, MD, USA (1 Mar 1983).

Portions are illegible in microfiche products.

The dynamic behavior of an intense microwave pulse which propagates through the atmosphere will be presented. Our theoretical results are obtained by solving Maxwell's equations, together with the electron fluid equations. Our calculations show that although large portions of the initial energy are absorbed by the electrons that are created through the avalanche process, a significant amount of energy is still able to reach the earth's surface. The amount of energy that reaches the earth's surface as a function of initial energy and wave shape after having propagated through 100 km in the atmosphere are investigated. Results for the air breakdown threshold intensity as a function of the pressure for different pulse widths and different frequencies will also be presented. In addition, we will present a comparison between the theoretical and the experimental results for the pulse shape of a short microwave pulse after it has traveled through a rectangular wave guide which contains a section of air. 23 references, 9 figures.

29550 **Pedersen density drift instabilities.** Gary, S.P.; Cole, T.E. (Los Alamos National Lab., NM). *Journal of Geophysical Research;* **88**: No. A12, 10,104-10,110(1 Dec 1983).

This paper describes the linear kinetic theory of electrostatic drift instabilities driven by Pedersen and density drift velocities. The model uses a uniform magnetic field B = zB; a weak, uniform density gradient in the x direction; and a weak, uniform electric field in the y direction. Weak charged-neutral collisions are represented by the addition of BGK model terms to the Vlasov equation. The resulting local dispersion equation is used to study the properties of the associated instabilities at ka/sub i/ ~> 1 (where k is the wave number and a/sub i/ is the ion gyroradius). Results show that the E x B gradient drift instability at ka/sub i/ ~= 1 may grow in the auroral ionosphere primarily in the vicinity of 200 km and only if the electron density is sufficiently small. 2 figures.

29551 **Electron velocity distributions near interplantary shocks.** Feldman, W.C.; Anderson, R.C.; Bame, S.J.; Gosling, J.T.; Zwickl, R.D.; Smith, E.J. (Los Alamos National Lab., NM). *Journal of Geophysical Research;* **88**: No. A12, 9949-9958(1 Dec 1983).

Solar wind electron velocity distributions measured across interplanetary shocks using the Los Alamos plasma analyzer on ISEE 3 have been studied to understand electron heating mechanisms for weak and intermediate strength collisionless shocks. This study thus complements earlier studies of electron heating at the earth's bow shock, an example of a highly supercritical collisionless shock. At the weakest interplanetary shocks (downstream to upstream density ratio N(d/u) ~< 2 and velocity difference V(d-u) ~< 70 km/s), heating perpendicular to the magnetic field B predominates over parallel heating. Such heating may be a consequence of conservation of magnetic moment across the shock. At the stronger interplanetary shocks (N(d/u) ~> 2 and V(d-u) ~> 70 km/s), heating parallel to B is dominant and the downstream velocity distributions are flat-topped, similar to what is observed downstream of the earth's bow shock. This similarity suggests that electron heating in all collisionless shocks with N(d/u) ~> 2 and V(d-u) ~> 70 km/s results in part from an acceleration parallel to

B produced by the macroscopic shock electric field, followed by beam driven plasma instabilities. 14 figures, 4 tables.

29552 **(CONF-840403—3) Pressure-dependent electron attachment and breakdown strengths of unitary gases, and synergism of binary gas mixtures: a relationship.** Hunter, S.R.; Christophorou, L.G. (Oak Ridge National Lab., TN (USA); Tennessee Univ., Knoxville (USA). Dept. of Physics). Apr 1984. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011656.

From 4. international symposium on gaseous dielectrics; Knoxville, TN, USA (29 Apr 1984).

Portions are illegible in microfiche products.

The relationship between the pressure-dependent electron attachment rate constants (k/sub a/) which have been observed in 1-C_3F_6 and in several perfluoroalkanes, and the uniform field breakdown strengths (E/N)/sub lim/ in these gases is discussed. Measurements of the pressure dependence of k/sub a/ of OCS in a buffer gas of Ar are presented and the possible pressure dependence of (E/N)/sub lim/ in OCS is discussed. Uniform field breakdown measurements have been performed in C_3F_8, n-C_4F_{10}, and SO_2 over a range of gas pressures (3 ≦ P/sub T/ ≦ 290 kPa) and are reported. All three molecules have been found to possess pressure-dependent (E/N)/sub lim/ values. The various types of synergistic behavior which have been observed in binary gas dielectric mixtures are summarized and discussed. A new mechanism is outlined which can explain the synergism observed in several gas mixtures where the (E/N)/sub lim/ values of the mixutres are greater than those of the individual gas constituents. Model calculations are presented which support this mechanism, and can be used to explain the pressure-dependent synergistic effects which have been reported in 1-C_3F_6/SF_6 gas mixture.

29553 **(CONF-840403—5) Electron attachment fo halocarbons of interest in gaseous dielectrics.** McCorkle, D.L.; Christodoulides, A.A.; Christophorou, L.G. (Tennessee Univ., Knoxville (USA). Dept. of Physics and Astronomy). 1984. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011668.

From 4. international symposium on gaseous dielectrics; Knoxville, TN, USA (29 Apr 1984).

Total electron attachment rate constants and cross sections for halomethane and haloethane (freon) compounds are summarized and new results are reported for haloethylenes. The relationship between the electron attachment cross section and the breakdown strength of dielectric gases reported earlier is further discussed.

29554 **(CONF-840449—3) Physics of ion sputtering.** Robinson, M.T. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011664.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

The ejection of atoms by the ion bombardment of solids is discussed in terms of linear collision cascade theory. A simple argument describes the energies of the ejecta, but elaborate models are required to obtain accurate sputtering yields and related quantities. These include transport theoretical models based on linearized Boltzmann equations, computer simulation models based on the binary collision approximation, and classical many-body dynamical models. The role of each kind of model is discussed. Several aspects of sputtering are illustrated by results from the simulation code MARLOWE. 20 references, 6 figures.

29555 **(CONF-840449—4) Fundamental studies of molecular multiphoton ionization.** Miller, J.C.; Compton, R.N. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011661.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

For several years the authors have performed fundamental studies of molecular multiphoton ionization (MPI). We will present a potpourri of techniques and results chosen to illustrate the interesting complexities of molecular MPI. Techniques used include time-of-flight mass spectroscopy, photoelectron spectroscopy, supersonic expansion cooling of molecular beams, harmonic generation, two-color laser MPI, and polarization spectroscopy. Whenever possible the relevance of these results to resonance ionization spectroscopy schemes will be delineated. 23 references, 10 figures.

29556 **(CONF-840449—5) Conceptual basis of resonance ionization spectroscopy.** Payne, M.G. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011662.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

Resonance Ionization Spectroscopy (RIS) can b defined as a state-selective detection process in which tunable lasers are used to promote transitions from the selected state of the atoms or molecules in question to higher states, one of which will be ionized by the absorption of another photon. At least one resonance step is used in the stepwise ionization process, and it has been shown that the ionization probability of the spectroscopically selected species can nearly always be made close to unity. Since measurements of the number of photoelectrons or ions can be made very precisely and even one electron (or under vacuum conditions, one ion) can be detected, the technique can be used to make quantitative measurements of very small populations of the state-selected species. Counting of individual atoms has special meaning for detection of rare events. The ability to make saturated RIS measurements opens up a wide variety of applications to both basic and applied research. We view RIS as a specific type of multi-photon ionization in which the goal is to make quantitative measurements of quantum-selected populations in atomic or molecular systems. 16 references.

29557 **(CONF-840449—7) Historical survey of resonance ionization spectroscopy.** Hurst, G.S. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011654.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

We have recently celebrated the 10th birthday of Resonance Ionization Spectroscopy (RIS), and this seems an appropriate time to review the history of its development. Basically, RIS is a photophysics process in which tunable light sources are used to remove a valence electron from an atom of selected atomic number, Z. If appropriate lasers are used as the light source, one electron can be removed from each atom of the selected Z in the laser pulse. This implies that RIS can be a very efficient, as well as selective, ionization process. In what we normally call RIS, laser schemes are employed which preserve both of these features. In contrast, multiphoton ionization (MPI) is more general, although not necessarily Z selective or very efficient because resonances are often not used. Early research completed in the USSR and described as selective two-step photoionization, employed resonances to ionize the rubidium atom and served to guide work on laser isotope separation. 29 references, 8 figures.

29558 **(CONF-840449—8) Resonance ionization spectroscopy of argon, krypton, and xenon using vacuum ultraviolet light.** Kramer, S.D. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011655.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

Resonant, single-photon excitation of ground state inert gases requires light in the vacuum ultraviolet spectral region. This paper discusses methods for generating this light. Efficient schemes for

ionizing argon, krypton, and xenon using resonant, stepwise single-photon excitation are presented.

29559 **(CONF-840449—9) Isotopically selective counting of noble gas atoms, using resonance ionization spectroscopy.** Chen, C.H. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011638.

From 2. symposium on resonance ionization spectroscopy and its applications; Knoxville, TN, USA (16 Apr 1984).

Portions are illegible in microfiche products.

The technique of Resonance Ionization Spectroscopy (RIS) is being extended to develop a means for counting individual atoms of a selected isotope of a noble gas. In this method, lasers are used for RIS to obtain atomic species (Z) selectivity and a small quadrupole mass spectrometer provides isotopic (A) selectivity. A progress report on the objective of counting each atom of a particular isotope of a noble gas is given. 10 references, 4 figures.

29560 **(CONF-8404143—3) Dual arc penning ion source gas flow experiments.** Hudson, E.D.; Lord, R.S.; Mallory, M.L.; Antaya, T.A. (Oak Ridge National Lab., TN (USA); Michigan State Univ., East Lansing (USA)). 1984. Contract AC05-84OR21400. 3p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011637.

From 10. international conference on cyclotrons and their applications; East Lansing, MI, USA (30 Apr 1984).

Support gas, when added directly to an arc or admitted to an auxiliary chamber of a two-arc chamber ion source, increases the beam intensity for multicharged ions such as $^{16}O^{6+}$. To clarify the mechanism of this intensity increase, gas flow rates from the auxiliary chamber to the main chamber have been measured by using the ORIC cyclotron as a mass spectrometer. The results show that only about three percent of the gas admitted to the auxiliary chamber reaches the main chamber. One can then infer that the improved operation probably results from the stabilizing effect of heating the common cathodes with the auxiliary arc and/or the more favorable distribution of the support gas to the part of the main arc close to the cathodes.

29561 **(DOE/DP/01118—T1) Theoretical atomic and molecular photophysics. Final technical report, October 1, 1981-September 30, 1982.** Eberly, J.H. (Rochester Univ., NY (USA). Portions are illegible in microfiche products.

Nonlinearities arise in the interaction of light and matter as soon as the light intensity approaches the so-called saturation intensity. It is in this case that an atomic transition stops responding as a harmonic oscillator, and that the atom's inversion begins to play a role in the excitation process. Purely coherent intense plane-wave light gives rise to a variety of remarkable nonlinear effects upon absorption by, or transmission through, a collection of nearly resonant atoms or molecules. In many circumstances, one is interested in the excitation of atomic vapors under conditions that are far from purely coherent or plane-wave in character. Among the more realistic situations encountered in practice are those in which the light is a beam with finite cross section instead of a plane wave, and the atom-light interaction is made partially incoherent by the presence of noise, such as is contributed by collisions of various kinds. In addition, it may not be realistic to treat the absorbing atoms or molecules as if they had a well-defined unique ladder of energy levels through which an electron can be promoted en route to ionization. Few theoretical tools are available for analysis of nonlinear light-matter interactions in these more realistic situations. A brief summary is given here of research into propagation of intense light and dressed atom dynamics.

29562 **(INIS-mf—8391) Measurement of the linear polarization of the photons in the elementary processes of bremsstrahlung production.** Bleier, W. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 17 Feb 1983. 61p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780236.

The polarization of the photons in the elementary processes of the electron-nucleus and electron-electron bremsstrahlung was measured. Electrons with an energy of 300 keV were scattered by copper, gold and carbon target. The polarization in the different processes was measured by using different coincidence methods.

29569 (LBL—16281, pp 575-578) **Recent atomic physics experiments at the Bevalac.** Gould, H. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Recent atomic physics experiments at the Bevalac have concentrated on atomic collisions of very heavy particles, and three of these experiments are outlined here: energy loss by very heavy relativistic nuclei; radiative electron capture; and charge capture and loss by highly stripped uranium. The selection while incomplete is chosen to give an overall view of the atomic physics being studied at the Bevalac. These experiments point the way toward more ambitious experiments as more intense beams become available and experimenters gain experience.

29570 **(LBL—17294-Summ.) Vibrational spectra of CO on Ni (100) studied by infrared emission spectroscopy.** (Lawrence Berkeley Lab., CA (USA)). Feb 1984. Contract AC03-76SF00098. 6p. (CONF-840725—4-Summ.). NTIS, PC A02/MF A01. Order Number DE84009246.

From 3. international conference on infrared physics; Zurich, Switzerland (23 Jul 1984).

We have developed the technique of infrared emission spectroscopy in order to observe vibrational modes of molecules adsorbed on clean, single crystal metal surfaces. A novel apparatus has been constructed which measures the emission from a single crystal sample in thermal equilibrium at room temperature. The apparatus consists of a liquid helium cooled infrared grating spectrometer coupled to an ultrahigh vacuum system equipped with surface preparation and characterization facilities. 3 references, 3 figures.

29571 **(SLAC-CN—250) Engineering basis for selection of positron source material.** Feerick, B. (Stanford Linear Accelerator Center, CA (USA)). 10 Oct 1983. Contract AC03-76SF00515. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011772.

Portions are illegible in microfiche products.

This note describes the engineering basis for the selection of the positron source material. It assumes the approximate physics parameters have already been chosen (i.e. a high Z material of 6 radiation lengths thickness). As part of this study a basic heat transfer analysis of the target was performed and is discussed. It is concluded that Ta-10W is the most likely material to meet required physics parameters and not fail structurally.

29572 **Intense relativistic electron beam propagation in evacuated drift tubes.** O'Shea, P.G.; Welsh, D.; Destler, W.W.; Striffler, C.D. (Laboratory for Plasma and Fusion Energy Studies and the Electrical Engineering Department, University of Maryland, College Park, Maryland 20742). *Journal of Applied Physics;* **55**: No. 11, 3934-3939(1 Jun 1984).

The propagation of a magnetically confined intense relativistic electron beam (IREB) (1 MeV, 27 kA, 20 ns FWHM) in vacuum drift tubes has been studied experimentally and theoretically. Experimental results for current propagation as a function of uniform applied magnetic field (0—1.2 T) are presented for various drift tube diameters, cathode geometries, and anode aperture sizes. An analytic model of laminar beam flow is presented which predicts the space-charge-limited current of a solid IREB propagating in a grounded drift tube. A steady-state equilibrium is examined and is compared with the experimental results.

29573 **Variational calculation of lower vibrational energy levels of formaldehyde X $^1A_1$.** Maessen, B.; Wolfsberg, M. (Department of Chemistry, University of California, Irvine, California 92717). *Journal of Chemical Physics;* **80**: No. 10, 4651-4662(15 May 1984). Contract AT03-76ER70188.

The energies of lower lying vibrational states (J = 0) of formaldehyde in its ground electronic state are calculated variationally for H_2CO and D_2CO. The functions of the basis set correspond to products of harmonic oscillator functions. The full Watson Hamiltonian is used and integrals are evaluated by Gauss—Hermite numerical quadrature. Two different potential functions in internal displacement coordinates, which have been given in the literature, are employed in the calculations. Calculations are carried out for A_1, B_2, and B_1 symmetries with 196, 165, and 108 basis functions, respectively. The forms of some of the eigenvectors are reported.

29574 **Application of fitting laws to rotationally inelastic rate constants: Li_2.** Scott, T.P.; Smith, N.; Pritchard, D.E. (Research Laboratory of Electronics and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Journal of Chemical Physics;* **80**: No. 10, 4841-4850(15 May 1984).

Using the method of LIF we have measured with an average absolute error of 8% rate constants for rotationally inelastic collisions from level j/sub i/ = 8, 22, and 42 to level j/sub f/ = j/sub i/+Δj for Li_2 ($A\Sigma$) colliding with Xe, Ar, and Ne. Values of 'Δj' up to 32 were studied, involving rotational energy charges as large as 1.5 kT and collisions during which the Li_2 molecule rotated as much as 3 rad. These extremes are several times larger than the corresponding values in any previous experimental studies of rotationally inelastic collisions, and present a formidable challenge both to the experimental technique and to any general relationships used to fit the data. Four parameter fits with average deviation from the data of 11% have been found; these fits combine the energy corrected sudden approximation of DePristo et al. with our recently proposed power law-exponential expression for the basis rates k/sub j/→0 .

29575 **Molecular properties from MCSCF-SCEP wave functions. II. Calculation of electronic transition moments.** Werner, H. (Theoretical Division, MS J569, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **80**: No. 10, 5080-5084(15 May 1984).

A method for calculating first order reduced transition density matrices between general singles-doubles multireference-CI wave functions (MCSCF-SCEP) is presented. The internal coupling coefficients are given in terms of simple overlap and first order transition density matrix elements between a set of N-1 and N-2 electron core functions, which need not necessarily to be orthogonal. As characteristic for the SCEP technique no external coupling coefficients appear in the formalism, and the transition density matrix is obtained in terms of matrix operations involving coefficient matrices and vectors. Some test calculations for the A—X transitions of the OH and CN radicals are presented. The stability of calculated transition moments with respect to the number of reference configurations and the size of the basis sets is investigated. Furthermore, the singles-doubles CI results are compared to those obtained from first order and internal CI wave functions corresponding to the same reference wave function.

29576 **Extraction of H^- beams from a magnetically filtered multicusp source.** York, R.L.; Stevens, R.R. Jr.; Leung, K.N.; Ehlers, K.W. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Review of Scientific Instruments;* **55**: No. 5, 681-686(May 1984). Contract AC03-76SF00098;W-7405-ENG-36.

H^- ions produced by volume processes have been extracted from a multicusp source operated with a magnetic filter and accelerated to form a high-quality beam. It was found that the H^- beam current increased almost linearly with the discharge current. An H^- ion current density of 38 mA/cm² was obtained with a discharge current of approximately 350 A. The accelerated beam was mass analyzed and the emittance of the H^- component was measured. The electron component and the percentage of ion impurity in the extracted beam were also determined.

29577 **Measurement of the positron surface-state lifetime for Al.** Lynn, K.G.; Frieze, W.E.; Schultz, P.J. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **52**: No. 13, 1137-1140(26 Mar 1984). Contract AC02-76CH00016.

The decay rate has been determined for positrons annihilating with electrons while localized in the image-induced potential well at the (110) surface of a clean well-annealed single crystal of Al at 300 K. The lifetime associated with positrons in this surface state was found to be 580 +- 10 psec. This value, which has never before been directly measured, is in disagreement with present theories. Changes in the lifetime spectra were also found from ion sputtering and from exposure of the surface to various amounts of oxygen.

29578 **Overview of the symposium: status and direction of current research with highly charged ions.** Crandall, D.H. (Oak Ridge National Lab., TN). *Physica Scripta;* **T3**: 249-253(1983). Contract W-7405-ENG-26.

A little of the history preceding the symposium on Production and Physics of Highly Charged Ions is presented as well as a brief summary of some of the flavor of the occasion. The symposium covered a wide range of topics including: ion sources, new experimental techniques, spectroscopy, astrophysics, fusion, electron-ion collisions, and ion-atom collisions. The amount of new experimental data on ion-atom collisions alone was substantial. In all of

the spectroscopy and collisions studies presented, the most universal feature is that the final state of the ion or colliding system is electronically excited. Some of the mechanisms of both formation and decay of the excited states are unique for highly charged ions. Both opportunity and enthusiasm were apparent for continuing atomic physics studies with highly charged ions.

29579 (AD-A—137082/4) Kinetic theory of gases, magneto-fluid dynamics and their application. Interim 1 Dec 81-30 Nov 82. Grad, H. (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). Jan 1983. 24p. NTIS, PC A02/MF A01.

This paper describes research results and cites progress resulting from work performed during this period of the grant. The areas covered in this report are (1) mathematical theory of turbulent fluctuations of a plasma near thermal equilibrium, (2) the theory of non-linear thermal and diffusive waves in finite mass and reacting media, (3) the development of algorithms for the Helmholtz equation, (4) progress in the development of theory for Queer Differential Equations, and (5) spectral theory of non-elliptic operators.

29580 Analytical solutions of model equations for two phase gas mixtures: transverse velocity perturbations. Cavalier, J.F.; Greenberg, W. (Department of Mathematics, West Virginia Institute of Technology, Montgomery, West Virginia 25136). *Physics of Fluids;* **27**: No. 5, 1114-1124(May 1984). Contract AS05-80ER10711.

Model equations for a dilute binary gas system are derived, using a linear BGK scheme. Complete analytical solutions for the stationary half-space problem are obtained for transverse velocity perturbations. The method of solution relies on the resolvent integration technique.

29581 Converging second sound shock waves in superfluid helium. Torczynski, J.R. (Graduate Aeronautical Laboratories, California Institute of Technology, Pasadena, California 91125). *Physics of Fluids;* **27**: No. 5, 1138-1141(May 1984).

A spherical heater and conical channel are used to produce converging second sound shock waves. Arrival time and temperature jump data verify the validity of the weak shock relations. The calculated relative velocities (around 10 m/sec) are the largest ever produced in bulk superfluid helium. Comparison of converging and straight channel experiments shows unambiguously that the phenomena associated with the breakdown of superfluidity in second sound shock experiments occur near the heater, not in the bulk fluid.

29583 (BNL—34569) Nuclear and particle physics aspects of hyperon and antinucleon interactions. Dover, C.B. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 14p. (CONF-8403112—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010793.

From International symposium on nuclear spectroscopy and nuclear interactions; Osaka, Japan (21 Mar 1984).

Portions are illegible in microfiche products.

A discussion is given of hyperon (Y) and antinucleon (anti N) interactions with nucleons and nuclei, emphasizing some of the future prospects for nuclear structure and elementary particle physics studies at LEAR or a future kaon factory. The topics addressed include: (1) production and decay of strange dibaryons; (2) spectroscopy of strangeness S = -2 many body systems; (3) N anti N annihilation mechanisms; and (4) inelastic anti N-nucleus scattering and spin-flip excitations in nuclei. 36 references.

29584 (CEA-CONF—6767) Q.C.D. and the transition between "hard" and "soft" scattering at the SPS collider. Peschanski, R. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). May 1983. 15p. (CONF-8304153—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750625.

From 11. international winter meeting on fundamental physics; Toledo, Spain (11 Apr 1983).

Studying the features of hard and soft collisions at the SPS collider, we conjecture that a large part of hadronic events are due to "semi-hard" parton-parton collisions accompanied with a large gluon radiation. We show that relevant perturbative QCD calculations give a plausible explanation for the total cross-section rise between ISR and the SPS collider.

29585 (DESY-HERA—83/20) Experimentation at HERA. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); European Committee for Future Accelerators; Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands)). From Workshop on experimentation at HERA; Amsterdam, Netherlands (9 Jun 1983).

These proceedings contain three articles concerning the physics which can be studied by HERA, which were presented at the named workshop, together with convenor reports on working groups which concern technologies, the intersecting regions, photoproduction at HERA, currents and structure functions, exotic phenomena at HERA, and the use of existing detectors. Finally the experimental halls at HERA are described. Separated abstracts were prepared for the articles in these proceedings.

29586 (DESY-HERA—83/20, pp 3-37) **Virtues of HERA.** Maiani, L. Oct 1983. NTIS (US Sales Only), PC A24/MF A01. Order Number DE84751338. (CONF-8306156—). TI84751338

From Workshop on experimentation at HERA; Amsterdam, Netherlands (9 Jun 1983).

After a general survey of the current status of high energy physics the author discusses the physics which can be studied by HERA. In this framework he considers deep inelastic ep scattering, studies of weak interactions by charged-current ep scattering and the production of new leptons in such processes, the search for supersymmetric particles, and the study of a possible compositeness of quarks and leptons.

29587 **(DESY-L-Trans—287) Limitations on parameters of neutrino oscillations according to data for quasielastic scattering of neutrino beams at the Serpukhov Institute of High Energy Physics.** Belikov, S.V.; Volkov, A.A.; Kochetkov, V.I.; Mukhin, A.I.; Sviridov, Yu.M.; Shestermanov, K.E. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Jan 1984. 6p. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.).

Translated from Russian. Published in Pisma Zh. Tekh. Fiz v. 38(11) (1983) p. 547-550.

Limitations on parameters of muon neutrino oscillations νsub(μ) -> νsub(x) are presented, which were found on the basis of an analysis of quasielastic scattering data in a joint experiment of the Serpukhov Inst. High Energy Physics and the Moscow Inst. Theor. Exp. Phys. at neutrino beams of the Serpukhov Institute. For values of squared mass difference: $\Delta m^2 >$ or approx. 15 eV^2, the mixing coefficient sin^{2}2THETA< or approx.9x10^{-2} at a confidence level of 90%.

29588 **(DOE/ER/01428—504) Test of quantum electrodynamics using the reaction $e^+e \rightarrow \gamma\gamma$ at $\sqrt{s} = 29$ GeV.** Wood, D.E. (Purdue Univ., Lafayette, IN (USA)). May 1984. Contract AC02-76ER01428. 113p. (PU—84-511). NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84011609.

Portions are illegible in microfiche products; Thesis.

Study of the reaction $e^+e^- \rightarrow \gamma\gamma$ has been done at a center-of-mass energy of 29 GeV. A data sample from an integrated luminosity of 17.8 pb^{-1} was used. A total of 1806 events was found. The γ rays were detected in the barrel electromagnetic calorimeter of the HRS in the range of polar angles $57^0 < \theta < 123^0$. The angular distributions of $e^+e^- \rightarrow \gamma\gamma$ were compared to third-order QED by using the Berends and Kleiss event generation and a simulation of the detector. 22 references

29589 **(DOE/ER/10667—5) Task A. Study of large P/sub T/ direct photon production at the ISR. Task B. Direct photon production at the tevatron (E-706). Task C. Search for fractional charge particles in semiconductors. Progress report, June 1, 1983-May 31, 1984.** Cleland, W.E.; Coon, D.D.; Engels, E. Jr.; Shepard, P.F.; Thompson, J.A. (Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy). Jan 1984. Contract AC02-80ER10667. 105p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84011503.

Portions are illegible in microfiche products.

Task A is the Pitt contingent of the Axial Field Spectrometer Collaboration, performing experiment R807/808 at CERN. The experiment has studied several topics related to study of high P/sub T/ phenomena such as production of jets at high E/sub T/ and a comparison of their properties with jets seen in e^+e^-. We are working primarily on those aspects of the experiment involving reactions with photons in the final state. We are completing an analysis of prompt photons and pions produced at 11° in the center of mass, from data taken in 1982. Presently, new data are being taken with two large NaI arrays in place. With these data, we are studying low P/sub T/ (20 to 200 MeV/c) photon production as well as prompt photons in the range 1.5 < P/sub T/ < 4 GeV/c. For the 1.5 - 4 GeV/c data we plan to compare single photon production in pp and anti pp collisions. Task B is the Pitt contingent of the E706 collaboration, which is studying prompt photon production in πp and pp collisions at the Tevatron. The major contribution of the Pitt effort to the experiment is the provision of the array of semiconductor detectors required for the charged particle spectrometer to be used in the study of correlated hadronic jets. Task C is the search for fractional charge in semiconductors. Although the physics goals of this experiment are removed from those of the other tasks, the technical overlap with task B is extremely important. The construction and testing of semiconductor detectors requires specialized semiconductor physics knowledge and instrumentation, both of which are being developed concurrently by these two tasks. 109 references.

29590 **(DOE/ER/40103—T1) High Energy Physics Group. Annual progress report, fiscal year 1983.** (Hawaii Univ., Honolulu (USA). Dept. of Physics and Astronomy). 20 Jul 1983. Contract AC03-83ER40103. 123p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84010325.

Portions are illegible in microfiche products.

Perhaps the most significant progress during the past twelve months of the Hawaii experimental program, aside from publication of results of earlier work, has been the favorable outcome of several important proposals in which a substantial fraction of our group is involved: the Mark II detector as first-up at the SLC, and DUMAND's Stage I approval, both by DOE review panels. When added to Fermilab approval of two neutrino bubble-chamber experiments at the Tevatron, E632 and E646, the major part of the Hawaii experimental program for the next few years is now well determined. Noteworthy in the SLAC/SLC/Mark II effort is the progress made in developing silicon microstrip detectors with microchip readout. Results from the IMB(H) proton decay experiment at the Morton Salt Mine, although not detecting proton decay, set the best lower limit on the proton's lifetime. Similarly the Very High Energy Gamma Ray project is closely linked with DUMAND, at least in principle, since these gammas are expected to arise from pi-zero decay, while the neutrinos come from charged meson decay. Some signal has been seen from Cygnus X-3, and other candidates are being explored. Preparations for upgrading the Fermilab 15' Bubble Chamber have made substantial progress. Sections of the Progress Report are devoted to VAX computer system improvements, other hardware and software improvements, travel in support of physics experiments, publications and other public reports, and last analysis of data still being gleaned from experimental data taken in years past (PEP-14 and E546, E388). High energy physics theoretical research is briefly described. (WHK)

29591 **(DOE/SF/00235—T3) Annual progress report of the High Energy Physics Group.** (Hawaii Univ., Honolulu (USA). Dept. of Physics and Astronomy). 20 Jul 1983. Contract AM03-76SF00235. 123p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84011457.

Portions are illegible in microfiche products.

Perhaps the most significant progress during the past twelve months of the Hawaii experimental program has been the favorable outcome of several important proposals: the Mark II detector as first-up at the SLC, and DUMAND's Stage I approval, both by DOE review panels. When added to Fermilab approval of two neutrino bubble-chamber experiments at the Tevatron, E632 and E646, the major part of the Hawaii experimental program for the next few years is now well determined. Noteworthy in the SLAC/SLC/Mark II effort is the progress made in developing silicon microstrip detectors with microchip readout. This development promises to solve the cost/space problem of 50,000 channel secondary vertex detectors, which are clearly needed to take advantage of SLC's uniquely small beam interaction region. Results from the IMB(H) proton decay experiment at the Morton Salt Mine, although not detecting proton decay, set the best lower limit on the proton's lifetime. Similarly the Very High Energy Gamma Ray project is closely linked with DUMAND, at least in principle, since these gammas are expected to arise from pi-zero decay, while the neutrinos come from charged meson decay. Preparations for upgrading the Fermilab 15' Bubble Chamber have made substantial progress. Sections of the Progress Report are devoted to VAX computer system improvements, other hardware and software improvements, travel in support of physics experiments, publications and other public reports, and analysis of data still being gleaned from experimental data previously taken.

29592 (INIS-mf—8157, pp 1-8) **Preliminary results on νsub(μ)+e^-→νsub(μ)+e^-.** Baker, N.J.; Connoly, P.L.; Kahn, S.A. (Brookhaven National Lab., Upton, NY (USA)) (and others). 1982. NTIS (US Sales Only), PC A15/MF A01. Order Number DE83781040. (CONF-820675—Vol.2). TI83781040

From International conference on neutrino physics; Balaton, Hungary (14 Jun 1982).

The preliminary results on a recent experiment on νsub(μ)-e^- elastic scattering are presented. A brief review of the Glashow-Salam-Weinberg theory is given, indicating how the measurement of the total cross-section gives rise to an ambiguous solution for sin^{2}THETAsub(w), and showing how the differential cross-section can be used to resolve the ambiguity. The experimental configuration and the extraction of the signal are described. The data are compared with those from a previous experiment, and relevant dis-

tributions from the combined data sample are presented. The differential cross-section is examined in an attempt to resolve the ambiguity in sin²THETAsub(w), the lower value of sin²THETAsub(w)=0.20 being favored.

29593 (INIS-mf—8157, pp 20-29) **Measurement of the ratio sigma(νsub(μ)e→νsub(μ)e)/sigma(anti νsub(μ)e→anti νsub(μ)e).** 1982. NTIS (US Sales Only), PC A15/MF A01. Order Number DE83781040. (CONF-820675—Vol.2). TI83781040

From International conference on neutrino physics; Balaton, Hungary (14 Jun 1982).

Results of the measurement of the ratio of muon neutrino-electron to antineutrino-electron cross-sections are presented. The measured ratio, based on a sample of 46+-12 neutrino events and 77+-19 antineutrino events, is 1.37sub(-0.44)sup(+0.65). It corresponds to a value of sin²THETAsub(w)=0.215+-0.040. The systematic error in sin²THETAsub(w) is estimated to be 7%.

29594 (INIS-mf—8157, pp 51-57) **Measurement of the neutral-to-charged current cross-section ratios for νsub(μ)-interactions on proton and neutron.** 1982. NTIS (US Sales Only), PC A15/MF A01. Order Number DE83781040. (CONF-820675—Vol.2). TI83781040

From International conference on neutrino physics; Balaton, Hungary (14 Jun 1982).

In an exposure of the bubble chamber BEBC, filled with deuterium, to the CERN SPS wideband neutrino beam the neutral to charged current cross-section ratios on proton, neutron and deuteriuum has been measured. The values found are: Rsup(P)=0.478+-0.033 (stat) +-0.030 (syst); Rsup(n)=0.262+-0.017 (stat)N+-0.020 (syst); Rsup(N)=0.335+-0.016 (stat)+-0.020 (syst). The resulting values for the neutral current chiral coupling constants are: usub(L)sup(2)=0.14+-0.04 and dsub(L)sup(2)=0.18+-0.05. In the Weinberg-Salam model this corresponds to sinsup(2)THETAsub(w)=0.21+-0.03. (author).

29595 (INIS-mf—8157, pp 62-88) **Structure of electroweak interactions.** Niebergall, F. (European Organization for Nuclear Research, Geneva (Switzerland); Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Experimentalphysik). 1982. NTIS (US Sales Only), PC A15/MF A01. Order Number DE83781040. (CONF-820675—Vol.2). TI83781040

From International conference on neutrino physics; Balaton, Hungary (14 Jun 1982).

The present experimental status of Weinberg-Salam model of electroweak interactions is reviewed. All experimental data are in agreement with the standard SU(2)xU(1) form of the theory. The main features of the theory and the corresponding experimental results confirming the hypotheses of the theory are listed and illustrated. The multiplet structure and universal coupling properties of the theory are discussed. The crucial test of WS theory, the discovery of W and Z bosons, is expected in 1983.

29596 **(INIS-mf—8343) Measurement of the nucleon structure function in the deep inelastic neutrino-iron scattering with a wide-band neutrino beam.** Flottmann, T. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1982. 53p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780168.

In this thesis the nucleon structure function xF_3 is determined from the inclusive measurement of the deep inelastic neutrino nucleon charged current interaction. The data were taken in the CERN wide band neutrino beam using the detector of the CERN-Dortmund-Heidelberg-Saclay collaboration. This detector serves at the same time as target, as hadron energy calorimeter and as muon spectrometer. One major aspect of this work was to study the possibility of using high statistics wide band beam data for structure function analysis. The systematic errors specific to this kind of beam are investigated. To obtain the differential cross sections about 100000 neutrino and 75000 antineutrino events in the energy range 20-200 GeV are analysed. The differential cross sections are normalized to the total cross sections, as measured in the narrow band beam by the same collaboration. The calculated structure function xF_3 shows significant deviations from scaling. These scaling violations are compared quantitatively with the predictions of quantum chromodynamics.

29597 (INIS-mf—8921, pp 41) **(e,e′π) reaction in light nuclei and spin-isospin strength distribution effects.** Cohen, J.; Eisenberg, J.M. (Tel Aviv Univ. (Israel). From 3. working conference on IPHE-JINR neutrino detector; Dubna, USSR (18 Jan 1982).

Multimuon events in νsub(μ) (anti νsub(μ))N interactions are studied. A process of different sign dimuon production in the νsub(μ)(anti νsub(μ))N→μsup(-)πsup(+)X reaction is considered. The main contribution into a dimuon event is given by charm quark production process, its fragmentation into a charm hadron and semi-lepton decay of the charm hadron. Trimuon production in νsub(μ)N→μsup(-)μsup(-)α− sup(+)X, anti νsub(μ)N→μsup(+)μsup(+)μsup(-)N reactions is considered in the frames of the radiation and hadron models. Dimuon events with muons of the same sign (νsub(μ)N → $\mu^-\mu^-$X, anti νsub(μ)N → $\mu^+\mu^+$X) pass with production of a quarks anti c-pair and successive decay of one of the quarks through the semi-lepton channel. A possibility to

detect dimuon events in a neutrino detector is studied. The efficiency of $\mu^-\mu^+$ muon pair detection at high background radiation level is 53 %.

29604 **(JINR-R—1-83-306) Study on the inclusive charged particle characteristics in jets in πp p interactions at 40 GeV/c.** Grishin, V.G.; Didenko, L.A.; Kanarek, T.; Metreveli, Z.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701689.

The inclusive single particle distributions of secondary particles in jets in π^-p-interactions at 40 GeV/c are investigated. The obtained results are compared with the data on e^+e^--annihilation. The average jet charge for forward and background directions in c. m. s. is determined. The secondary particle rapidity correlations are studied with respect to the jet axis. The similarity between the inclusive single particle distributions in Feynman variable and particle rapidity from e^+e^--collisions in forward hemisphere and the same distributions from π^-p-collisions. The average jet charge for both hemispheres is consistent with the expected values for independent valence quark (diquark) fragmentation.

29605 **(KFK—3610) Investigation of tau pair production at PETRA.** Kuester, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Nov 1983. 90p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751303.

The reaction e^+e^- -> tau$^+$ tau$^-$ has been measured at center of mass energies around 34 GeV. The selection is sensitive to 93% of the tau pair decays, thus making possible a high identification efficiency of proportional 70% over a large solid angle. The total cross section has been measured to Rsub(tau) = sigmasub(tautau)/ sigmasub(point) = .94 +- .06(stat.) +- .06(syst.). In the differential cross section a charge asymmetry of Asub(tau) = (-(9.0 +- 6.6)% was observed, corresponding to a tau axial vector coupling to the weak neutral current of asub(tau) = -.94 +- 0.69. Moreover, final states from the decays tau -> $\pi\nu$, tau -> e$\nu\nu$, and tau -> $\mu\nu\nu$ have been isolated and branching ratios into these channels have been determined. From the inclusive momentum spectra of the observed decay products (including the channel tau -> rhoν) the forward backward asymmetry of tau polarization has been determined to Asub(p,tau) = -(1 +- 22)% which corresponds to vsub(tau) = -.1 +- 2.9. Tests on factorization are discussed.

29606 **(LA-UR—84-1327) Rare muon decays and lepton-family number conservation.** Hoffman, C.M. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 30p. (CONF-840379—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011410.

From 4. course on fundamental interactions in low energy systems; Erice, Italy (31 Mar 1984).

Portions are illegible in microfiche products.

A brief historical survey of the discovery of the muon, interest in neutrinoless processes, and lepton-number conservation laws is given. The present view of lepton-number conservation laws and the search for $\mu \to e\gamma$ are described. Other experiments are discussed including $\mu^+ \to e^+e^+e^-$ decay, $\mu^-Z \to e^-Z$ reactions, $\mu \to e\,\gamma\gamma$ decay, other rare muon processes, strangeness-changing muon-number-nonconserving decays, and tau decays. 52 references. 29607 (LBL—16281, pp 373-384) **$\alpha\alpha$ and αp interactions at the CERN ISR.** Stenlund, E. (CERN, Geneva, Switzerland). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Recent results on two-particle rapidity correlations measured in $\alpha\alpha$, αp and pp interactions are presented. The experiment was done at the CERN ISR using the Split Field Magnet detector. The true two-particle correlations were isolated by fixing the charged multiplicity. In the framework of a simple cluster model, the cluster widths as well as the cluster multiplicities were found to be the same for $\alpha\alpha$, αp and pp interactions. 9 references.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Working Group on New Particles and Interactions met as a whole at the beginning and at the end of the Workshop. However, much of what was accomplished was done in five subgroups. These were devoted to: (1) new quarks and leptons; (2) technicolor; (3) supersymmetry; (4) rare decays and CP; and (5) substructure of quarks and leptons. Other aspects of new particles, e.g., Higgs, W', Z', fell to the Electroweak Working Group to consider. The central question of this Workshop of comparing anti pp (with L = 10^{32}/cm^2-sec) with pp (with L = 10^{33}/cm^2-sec) colliders carried through to all these subgroups. In addition there were several other aspects of hadron colliders which were considered: what does an increase in $\sqrt{s}$ gain in cross section and resultant sensitivity to new physics versus an increase in luminosity; will polarized beams or the use of asymmetries be essential in finding new interactions; where and at what level do rate limitations due to triggering or detection systems play a role; and how and where will the detection of particles with short, but detectable, lifetimes be important. 25 references.

29610 **(SLAC-PUB—3321) Recent results on prompt electron production at PEP.** Elsen, E. (Stanford Linear Accelerator Center, CA (USA)). Apr 1984. Contract AC03-76SF00515;AC03-81ER40050. 9p. (CONF-8403121—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011859.

From New particle production at high energy meeting: The Recontre de Moriond; La Plagne, France (4 Mar 1984).

Recent experimental results on production of prompt electrons in e^+e^- annihilation at PEP are reviewed. The semielectronic branching ratios and the fragmentation functions of B- and C-mesons are discussed.

29611 **(SLAC-PUB—3325) Radiative decays of the upsilon (2S) resonance.** Irion, J. (Harvard Univ., Cambridge, MA (USA). Dept. of Physics; Stanford Linear Accelerator Center, CA (USA)). Apr 1984. Contract AC03-76SF00515;AC02-76ER03064. 11p. (CONF-8403121—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011858.

From New particle production at high energy meeting: The Recontre de Moriond; La Plagne, France (4 Mar 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Crystal Ball Detector at DORIS II was used to study radiative decays of the upsilon (2S) resonance with more than twice the previously available data. The inclusive photon spectrum of hadronic upsilon (2S) decays and the exclusive channel upsilon (2S) $\to \gamma\gamma$ upsilon (1S) $\to \gamma\gamma\, l^+l^-$ were analyzed. In the inclusive spectrum three significant photon lines at energies of $E\gamma_1$ = (108.2 +- 0.7 +- 4) MeV, $E\gamma_2$ = (127.1 +- 0.8 +- 4) MeV and $E\gamma_3$ = (160.0 +- 2.4 +- 4) MeV with branching fractions of (6.0 +- 0.7 +- 0.9)%, (6.6 +- 0.8 +- 1.0)%, (2.6 +- 0.7 +- 0.8)% respectively were measured. The lines are consistent with being transitions from the upsilon (2S) to the $^3P_2$, $^3P_1$ and $^3P_0$ states. In addition a line at

Eγ ~ 427 MeV was observed which is interpreted as transitions from the $^3P_{2,1}$ states to the upsilon (1S). 17 references.

29612 **Evidence for the electromagnetic production of the A_1.** Zielinski, M.; Berg, D.; Chandlee, C.; Cihangir, S.; Ferbel, R.; Huston, J.; Jensen, T.; Lobkowicz, F.; Ohshima, T.; Slattery, P. (University of Rochester, Rochester, New York 14627). *Physical Review Letters;* **52**: No. 14, 1195-1198(2 Apr 1984).

Using data on the coherent production of $\pi^+\pi^+\pi^-$ systems in π^+ collisions with nuclei, we have extracted an estimate for the radiative partial width of the A_1. The rate for $A_1^+ \rightarrow \pi^+\gamma$ is 640 +- 246 keV, which is a factor of about 2—3 below the value expected on the basis of predictions from quark models and from vector dominance ideas.

29613 **Search for narrow μ(π(mass enhancements in a neutrino bubble-chamber experiment.** Ballagh, H.C.; Bingham, H.H.; Lawry, T.J.; Lynch, G.R.; Lys, J.; Stevenson, M.L.; Huson, F.R.; Schmidt, E.; Smart, W.; Sokoloff, M.D. (Department of Physics and Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] D: Particles and Fields;* **29**: No. 7, 1300-1303(1 Apr 1984).

In a Fermilab 15-foot bubble-chamber experiment, $\mu^{-+}\pi^{+-}$ mass spectra were studied in 8444 neutrino interactions and 1367 antineutrino interactions. No significant narrow mass enhancements were found. A peak near 430 MeV/c^2 was observed, but when resolution is taken into account its significance is only roughly-equal1σ and its angular distributions do not show the characteristics expected for a resonance.

29614 **Search for highly ionizing particles in e^+e^- collisions at $\sqrt{s}$ = 29 GeV.** Fryberger, D.; Coan, T.E.; Kinoshita, K.; Price, P.B. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **29**: No. 7, 1524-1526(1 Apr 1984). Contract AC03-76SF00515.

The results of the analysis of data taken in the continuation of a previously reported search for highly ionizing particles at PEP are presented. Assemblies consisting of Lexan and CR-39 plastic track detectors were exposed in two runs to integrated luminosities of 30 x 10^{36} cm^{-2} and 150 x 10^{36} cm^{-2}. The search was sensitive to particles with magnetic charge 20e< or =g< or =200e or electric charge 3< or =Z< or =180. A combined (95% C.L.) upper limit on the production cross section of σ<3.2 x 10^{-33} cm^2 is obtained, improving our previous limits by more than an order of magnitude.

29615 **Limit on the b→u coupling from semileptonic B decay.** Chen, A.; Goldberg, M.; Horwitz, N.; Jawahery, A.; Lipari, P.; Moneti, G.C.; Trahern, C.G.; van Hecke, H.; Alam, M.S.; Csorna, S.E. (Syracuse University, Syracuse, New York 13210). *Physical Review Letters;* **52**: No. 13, 1084-1088(26 Mar 1984).

We have used the momentum spectrum of leptons produced in semileptonic B-meson decays to set a 90%-confidence-level upper limit on Γ(b→ulν)/Γ(b→clν) of 4%. We also measure the semileptonic branching fractions of the B meson to be (12.0 +- 0.7 +- 0.5)% for electrons and (10.8 +- 0.6 +- 1.0)% for muons.

29616 **Search for nucleon decay into μiK^0 and νK^0.** Cortez, B.G.; Bionta, R.M.; Blewitt, G.; Bratton, C.B.; Errede, S.; Foster, G.W.; Gajewski, W.; Ganezer, K.S.; Goldhaber, M.; Haines, T.J. (The University of California at Irvine, Irvine, California 92717; The University of Michigan, Ann Arbor, Michigan 48109; Brookhaven National Laboratory, Upton, New York 11973; California Institute of Technology, Pasadena, California 91125; Cleveland State University, Cleveland, Ohio 44115). *Physical Review Letters;* **52**: No. 13, 1092-1095(26 Mar 1984).

Observations have been made 1570 m (water equivalent) underground with an 8000 metric ton water Cherenkov detector. During a live time of 132 days, events consistent with the decay modes p→μ^+K^0 and n→νK^0 were searched for in a fiducial mass of 3300 metric tons. It is concluded that the limit on the lifetime for bound plus free protons divided by the μ^+K^0 branching ratio is tau/B>2.6 x 10^{31} yr. For bound neutrons decaying into νK^0 the limit is tau/B>0.8 x 10^{31} yr (90% confidence level).

29617 **Evidence for neutrino- and antineutrino-induced coherent π0 production.** Isiksal, E.; Rein, D.; Morfin, J.G. (III. Physikalisches Institut der Rheinisch-Westfalischen Technischen Hochschule, Aachen, West Germany). *Physical Review Letters;* **52**: No. 13, 1096-1099(26 Mar 1984).

The angular distribution of isolated photon conversion pairs, collected during the proton-synchrotron—Gargamelle ν and nu-bar freon experiments, has been examined to determine whether any anomalous small-angle production is present. There is a definite excess of conversion pairs over what is expected from resonantly produced and neutron-induced π^0's. This excess is in accord with ν- (nu-bar) induced coherent π^0 production off nuclei.

29618 **Inelastic and elastic photoproduction of J/psi(3097).** Denby, B.H.; Bharadwaj, V.K.; Summers, D.J.; Eisner, A.M.; Kennett, R.G.; Lu, A.; Morrison, R.J.; Witherell, M.S.; Yellin, S.J.; Estabrooks, P. (University of California, Santa Barbara, California 93106). *Physical Review Letters;* **52**: No. 10, 795-798(5 Mar 1984).

Inelastic and elastic J/psi photoproduction on hydrogen are investigated at a mean energy of 105 GeV. The inelastic cross section with E/sub psi/ /E/sub γ/<0.9 is significantly lower than the corresponding result for muoproduction on iron targets, but is consistent with a second-order perturbative QCD calculation.

29619 **Observation of radiative decays of the Υ(2S).** Haas, P.; Jensen, T.; Kagan, H.; Kass, R.; Behrends, S.; Chadwick, K.; Chauveau, J.; Gentile, T.; Guida, J.M.; Guida, J.A. (Ohio State University, Columbus, Ohio 43210). *Physical Review Letters;* **52**: No. 10, 799-803(5 Mar 1984).

Evidence is reported from the CLEO detector for the chi/sub b/(1P) states from radiative decays of the Υ(2S). Photons are detected by pair conversion in the beam pipe or a lead radiator, and the pair momenta are measured in the drift chamber. Two photon lines are well resolved, with energies 109.5 +- 0.7 +- 1 and 129.0 +- 0.8 +- 1 MeV.

29620 **Search for admixtures of massive neutrinos in the decay πi→μ^+ +nu-bar.** Minehart, R.C.; Ziock, K.O.H.; Marshall, R.; Stephens, W.A.; Daum, M.; Jost, B.; Kettle, P. (Physics Department, University of Virginia, Charlottesville, Virginia 22901). *Physical Review Letters;* **52**: No. 10, 804-807(5 Mar 1984).

Positive pions were stopped in a Ge detector and the energy of their decay muons was measured with a resolution of 6.7 keV. The energy spectrum was analyzed to obtain an upper limit for the branching ratio for the decay into a muon and a heavy neutrino. For neutrino masses between 2.5 and 10 MeV/c^2 this upper limit is a few parts in 10^4.

29621 **Measurement of the p-p elastic-scattering spin parameter C/sub L/L at 11.75 GeV/c for θ/sub c.m./ = 48°—90°.** Auer, I.P.; Colton, E.; Ditzler, W.R.; Hill, D.; Spinka, H.; Tamura, N.; Tavernier, J.; Theodosiou, G.; Toshioka, K.; Underwood, D. (High Energy Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review Letters;* **52**: No. 10, 808-810(5 Mar 1984).

Results are presented of a measurement of the proton-proton elastic-scattering spin parameter C/sub L/L = (L,L;0,0) at 11.75 GeV/c and θ/sub c.m./ = 48°—90°. The value of C/sub L/L is nearly constant and is approximately -0.16 in this angular region. This behavior is consistent with only one of the many models proposed describing the interaction via the hard scattering of two quarks.

29622 **Study of the reaction πp p -> $\pi^+\pi^-$n at 100 and 175 GeV/c.** Bromberg, C.; Dickey, J.O.; Fox, G.C.; Gomez, R.; Kropac, W.; Pine, J.; Stampke, S.R. (California Inst. of Tech., Pasadena); Haggerty, H.; Malamud, E. (Fermi National Accelerator Lab., Batavia, IL); Abrams, R. *Nuclear Physics [Section] B;* **232**: No. 2, 189-235(6 Feb 1984).

The reaction $\pi^- p \rightarrow \pi^+\pi^- n$ was studied at 100 and 175 GeV/c incident beam momenta. The p^0 region cross section was 0.934 μb at 100 GeV/c and 0.229 μb at 175 GeV/c. Spherical harmonic moments in the Gottfried-Jackson frame are presented as a function of mass and proton-neutron four-momentum transfer. The pion Regge trajectory is calculated. Decay distributions are presented for the p in the helicity and Gottfried-Jackson frames. The apparatus and analysis are discussed.

29623 **Neutrino physics at Fermilab.** Jovanovic, D. (Fermi National Accelerator Laboratory, Batavia, IL). pp 373-408 of The unity of the fundamental interactions. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-810762—).

From 19. international school of subnuclear physics; Erice, Italy (31 Jul 1981).

This chapter reports the preliminary results of 3 recently completed experiments and gives a progress report on the Fermilab experiment still in the data acquisition stage. The experiments consisted of 1) the measurement of charmed particle lifetimes, 2) the measurement of total neutrino and antineutrino cross sections, and 3) some new limits on neutrino oscillations. Points out that the 3 experiments represented different experimental techniques: emulsions, counter-detectors and bubble chambers. Notes that an overlap exists in the 3 experiments in the domain of neutrino masses and neutrino mixing. Presents a discussion featuring Jovanovich, Witten, Herten and others.

Strong coupling and weak coupling expansions for the low-lying mass spectrum in pure gauge theories are reviewed.

29625 **(DESY—83-118) Electroweak radiative corrections to the $^+e^-e \rightarrow {}^+\mu^-\mu$ asymmetry.** Boehm, M.; Hollik, W. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Nov 1983. 9p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751348.

The electromagnetic and purely weak 1-loop corrections to $e^+e^- \rightarrow \mu^+\mu^-$ have been calculated in the SU(2)xU(1) standard model using a on-shell renormalisation scheme with finite Green functions. Their influence on the forward backward asymmetry Asub(FB) together with soft and hard bremsstrahlung is discussed for PETRA-energies. Whereas the electromagnetic corrections to γ and Z^0 exchange diminuish Asub(FB), the weak corrections increase Asub(FB) almost compensating the QED correction to Z^0 exchange. The main weak contribution comes from the Z^0 self energy. The other diagrams give only small changes in Asub(FB).

From Workshop on experimentation at HERA; Amsterdam, Netherlands (9 Jun 1983).

The author discusses the physics which can be studied by HERA. This concerns measurement of the hadron structure, studies of electroweak interactions at high energies, high energy photon physics, and the study of exotic phenomena. In this connection the identification of events at HERA is discussed.

29627 **(DOE/ER/02271—107) Theoretical high energy physics. Progress report, May 1, 1983-April 30, 1984.** Lee, T.D. (Columbia Univ., New York (USA). Dept. of Physics). May 1984. Contract AC02-76ER02271. 22p. (COO—2271-107). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011854.

Portions are illegible in microfiche products.

Research is described on lattice gauge theory, in particular the design and construction of an array of special purpose processors for carrying out large scale Monte Carlo simulations of lattice QCD. Two prototype processors have been constructed and their design optimized for the gauge theory calculations of interest. The detailed study of the pure SU(3) specific heat in the transition region between the strong and weak coupling limits using their original matrix multiplier and a PDP 11/34 is described. Results, based on 100,000 sweeps on a 6^4 lattice, show no increase in height of the sharp peak found a year ago for a 4^4 lattice. This indicates that this structure does not correspond to a higher order phase transition. Also, progress is reported on a thesis project: a Monte Carlo study of the Abbott-Farhi model. This is a strong-coupling model of the standard Weinberg-Salam weak interaction theory whose properties can at present only be determined using numerical lattice gauge theory methods. An improved version of the matrix multiplier was completed, and the programs required to connect it to the VAX for use in QCD calculations on a random lattice are under development. Progress on the study of the problem of baryon number violation in the presence of SU(5) 't Hooft-Polyakov magnetic monopoles is described. A very simple model has been developed which appears to contain the essential features of this problem and which may allow a systematic solution. Publications are listed. (WHK)

29628 **(DOE/ER/03992—552) Research program in elementary particle theory. Progress report, 1984.** Sudarshan, E.C.G.; Dicus, D.A. (Texas Univ., Austin (USA). Center for Particle Theory). Apr 1984. Contract AS05-76ER03992. 79p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84011502.

Research progress is reported on the following topics: gauge theory and monopole physics; supersymmetry and proton decay; strong interactions and model of particles; quantum rotator and spectrum generating group models of particles; geometric foundations of particle physics and optics; and application of particle physics to astrophysics. The titles of DOE reports are listed, and research histories of the scientific staff of the Center for Particle Theory are included. (WHK)

29629 **(DOE/ER/40108—1) Unusual initial and final state effects in quantum chromodynamics. Progress report.** Nelson, C.A. (State Univ. of New York, Binghamton (USA). Dept. of Physics). Mar 1984. Contract AC02-83ER40108. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010422.

Portions are illegible in microfiche products.

Unlike for only soft initial degenerate states, the KLN theorem suggests that there will at least be a singular, if not a finite, contribution to the non-singlet structure function arising from initial collinear and soft degenerate states. We have extended the notion of double cut diagrams so as to evaluate the contribution from these states to the operator matrix elements and thereby are able to use the renormalization group equation in extracting the non-singlet coefficient function. This provides an alternative approach to the factorization of mass singularities and introduces in a practical context a degenerate state concept for the basic partons. In two preprints, the θ θ parity test is generalized to any specific $X \rightarrow V_1V_2$ decay mode where the vector mesons V_1 and V_2 each decays into two spin zero bosons. From a strong V_1V_2 mode with a $V_1 \rightleftharpoons V_2$ exchange property, the parity eta of X can always be determined. For weak VV or V anti V channels, the CP eigenvalue of the decaying X can be determined which means that a Higgs boson can be simply distinguished from a technipion. A sin2 phi or sin phi term in the azimuthal angular distribution would imply that CP is violated.

29630 **(EFI—593(80)-82) Hadrons from relativistic quarks and spin effects in high-energy processes at high Q^2.** Esaybegyan, S.V.; Grigoryan, S.G.; Ter-Isaakyan, N.L. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701682.

Polarization effects in inclusive and exclusive large-angle processes are analyzed within the framework of the relativistic

quark model. The consequences of the H spin invariance violation when considering quark-exchange and Landshoff diagrams in elastic nucleon-nucleon scattering are considered. It is shown that spin-flip amplitudes are not equal to zero because of the presence in relativistic wave functions of terms violating helicity conservation in the hadron-quark transition vertices.

29631 **(IC—82/218) Gyroelectric ratio of supersymmetrical monopole determined by its structure.** Hou, Bo-Yu. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701684.

This paper analyzes the distribution of the electric dipole produced by the zero energy charged particle around a Dirac monopole and then finds the unbroken U(1) electric polarization inherent by the supersymmetric monopole field so one can obtain its gyroelectric ratio as an intrinsic property.

29632 (INIS-mf—8921, pp 87) **Hyperleptonic generations in unifying schemes.** Davidson, A.; Sonnenschein, J. (Weizmann Inst. of Science, Rehovoth (Israel). Dept. of Nuclear Physics). 1983. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780235. (CONF-8303128—Summ.). TI84780235

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29633 **(JINR-R—2-83-83) Magnetostriction of a quark bag and hadron polarizability.** Matveev, V.A.; ChizhoV, A.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701683.

One of possible mechanisms of generating the hadron magnetic polarizability is pointed out. It is connected with nonperturbative effects in quantum chromodynamics. Introduction of an external magnetic field causes a change of the quark bag volume (shape). This magnetostriction effect of the quark bag leads to a dependence of its volume energy on the strength of the field and provides an additional contribution to the hadron polarizability. Estimates of the corresponding contributions for the proton, neutron and charged pion are 4.4×10^{-5} Fm^3, 2.1×10^{-5} Fm^3 and 2.5×10^{-5} Fm^3. Estimates presented for the pion as well as for the nucleon are by an order less than the experimental values of their polarizabilities. Thus the magnetostriction effect of the bound quark system in an external field is not excluded by experiments.

29634 **"Six-quark" component in the deuteron from a comparison of electron and neutrino/antineutrino structure functions.** Mulders, P.J.; Thomas, A.W. (Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review Letters;* **52**: No. 14, 1199-1202(2 Apr 1984). Contract AC02-76ER03069.

We discuss a way to measure the "six-quark" component in the deuteron from a comparison of the structure functions in ep and ed deep-inelastic scattering and the structure functions in νp and nu-barp scattering. Such a determination is obtained by looking at the deviation from 1 in the ratio $T = d(x)u(x)/u(x)d(x)$, where u and d are the quark distributions determined from νp and nu-barp, and u and d are the effective quark distributions determined from ep and ed by neglect of coherent six-quark effects.

29635 **Composite models and finite-width effects on $e^+e^- \rightarrow \mu^+\mu^-$ asymmetry.** Chen, P.; Rek, Z.; Renard, F.M. (Department of Physics, University of California, Los Angeles, California 90024). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1309-1316(1 Apr 1984). Contract AC03-76SF00515.

We investigate the possibility of distinguishing the standard model from composite models at an intermediate energy range (45—60 GeV). We show that effects due to multiple neutral weak bosons and their finite widths can be observable in $e^+e^- \rightarrow \mu^+\mu^-$ forward-backward asymmetry.

29636 **Production of scalar leptons in W- and Z-boson decay.** Michael Barnett, R.; Haber, H.E.; Lackner, K.S. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1381-1392(1 Apr 1984). Contract AC03-76SF00515.

Alternative decay modes of the W and Z bosons may provide a method either to discover the supersymmetric partners of leptons or to set greatly improved limits on their masses. Details are provided on these methods, and various distributions are shown for separating potential backgrounds. If p-barp→W→e/sub s/ν/sub s/ is allowed, a clear signal for supersymmetry could be established from future data. In e^+e^- annihilation a distinctive signature for scalar neutrinos could be jets plus an electron all confined to a single hemisphere (with substantial missing energy). Even more dramatic but rarer would be events with only $e^+ + \mu^-$ together in one hemisphere and all other energy missing.

29637 **Hadron-hadron collisions at extreme energies: Light-cone QCD with an axial-vector anomaly current and an infrared fixed point.** White, A.R. (High Energy Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1435-1454(1 Apr 1984).

We argue that QCD with the maximum number of fermions allowed by asymptotic freedom provides a "parton-model" description of soft high-energy collisions. That is, infinite-momentum quantization can be based on the perturbative vacuum and yet produce confinement and chiral-symmetry breaking. A first-stage infrared construction gives SU(2) gauge invariance and confinement. An infrared fixed point produces transverse momentum scaling and associated infrared divergences which couple to an anomaly-current component of a Fock-space wave function. The divergences factor on to color-zero states allowing the wave function zeros needed by transverse gauge invariance. Parton interactions are dominated by fermion-loop anomalies coupled to the divergences. As a result a pion has a vector valence-quark component. The infrared limit giving SU(3) gauge invariance is argued to be accompanied by critical-Pomeron high-energy behavior and spontaneous chiral-symmetry breaking, but is only briefly discussed in this paper.

29638 **Production of nonstandard Higgs bosons in e^+e^- collisions p.** Deshpande, N.G.; Tata, X.; Dicus, D.A. (Institute of Theoretical Science, University of Oregon, Eugene, Oregon 97403). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1527-1530(1 Apr 1984).

We show that in any theory with more than one Higgs multiplet, Higgs bosons may be copiously produced in electron-positron collisions at energies around the Z pole. The production of neutral Higgs bosons substantially exceeds that of charge Higgs bosons.

29639 **Hadronic remnants in W and Z production.** Rosner, J.L. (Enrico Fermi Institute and Department of Physics, University of Chicago, Chicago, Illinois 60637). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1531-1532(1 Apr 1984). Contract AC02-82ER40073.

It is proposed that in p-barp→(W^{+-} or Z)+hadrons, the remaining hadrons should behave on the whole like products of e^+e^- annihilations at a squared c.m. energy $s = s(1-x_1)(1-x_2)$, where $x_1x_2 = (M/\text{sub WorZ/})^2/s$, x_1-x_2 = p/sub WorZ//p/sub beam/. This allows one to anticipate gross features of $e^+e^- \rightarrow$hadrons up to c.m. energies of $\sqrt{s}$ -M/sub W/orZ (up to 450 or 460 GeV for the present CERN collider, and up to nearly 1 TeV at the Fermilab Tevatron).

29640 **Field compensation as an alternative to magnetic shielding in searches for nn-bar transitions.** Kabir, P.; Nussinov, S.; Aharonov, Y. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1537-1538(1 Apr 1984).

Application of suitable additional intermittent magnetic fields is proposed as an alternative to magnetic shielding in searches for n-n-bar transitions. The quenching effect of the Earth's field can be

negated by assuring that, within a characteristic time interval, a neutron experiences zero field on average.

29641 **Neutrino charge in the linear R/sub xi/ gauge.** Lucio Martinez, J.L.; Rosado, A.; Zepeda, A. (Centro de Investigacion y de Estudios Avanzados del Instituto Politecnico Nacional, Apartado Postal 14-740, 07000 Mexico, Distrito Federal Mexico). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1539-1541(1 Apr 1984).

It is shown that in the SU(2)/sub L/ x U(1) model of electroweak interactions dimensional regularization guarantees the vanishing of the one-loop contributions to the neutrino charge for every dimension n and for every value of the gague-fixing parameter ξ without the need for counterterms and without having to invoke Ward identities.

29642 **Parity-odd asymmetries in W-jet events at hadron colliders p.** Hagiwara, K.; Hikasa, K.; Kai, N. (Physics Department, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review Letters;* **52**: No. 13, 1076-1079(26 Mar 1984). Contract AC02-76ER00881.

Parity-nonconserving asymmetries appear in the angular distribution of the charged leptons from the decay of W bosons produced with high transverse momentum in hadron colliders. Absorptive parts of the amplitudes which produce the nonvanishing asymmetry are calculated in the one-loop order. The asymmetries grow rapidly with the W transverse momentum q/sub T/ and reach a 5% level at q/sub T/$\sim$20 GeV. Measurements of the sign of the asymmetries will distinguish clearly between V-A and V+A couplings without polarization experiments.

29643 **Some comments on heavy fermions and leptoquarks.** Nussinov, S. (Center for Theoretical Physics, Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742). *Physical Review Letters;* **52**: No. 12, 963-965(19 Mar 1984).

It is pointed out that if heavy [O(TeV)] fermion generations exist and if the source of their masses is the single doublet of the Glashow-Weinberg-Salam model {with a light [< or =O(1/2) TeV)] physical Higgs} then very tightly bound exotic LQ, LQ-bar, QQ, LL, etc., states may arise marking a dramatic appearance of new physics. In passing there is recalled the phenomenological observation that a discovery of a top quark via its semileptonic decay will practically exclude charged Higgs particles in the mass range m/sub t/-m/sub b/> or =M+.

29644 **Prompt electron production in e^+e^- annihilation at 29 GeV p.** Koop, D.E.; Sakuda, M.; Atwood, W.B.; Baillon, P.H.; Barish, B.C.; Bonneaud, G.R.; DeStaebler, H.; Donaldson, G.J.; Dubois, R.; Duro, M.M. (California Institute of Technology, Pasadena, California 91125 and Stanford Linear Accelerator Center and Physics Department, Stanford University, Stanford, California 94305). *Physical Review Letters;* **52**: No. 12, 970-973(19 Mar 1984). Contract AC03-76SF00515;AC03-81ER40050.

Inclusive electrons have been studied in hadronic events from e^+e^- annihilation at 29 GeV. The cross section is measured as $\sigma(e^+e^-\rightarrow e^{+-}X) = 35.8 +- 4.6$ pb in the momentum range $0.5<p<5.5$ GeV/c. The semielectronic branching ratios of b and c quarks are found to be (14.6 +- 2.8)% and (9.1 +- 1.3)%, respectively. Hard p fragmentation functions are found for both b and c, with <z/sub b/> = 0.78 +- 0.05 and <z/sub c/> = 0.69 +- 0.06. No evidence of anomalous electron production is observed.

29645 **Mass of the Higgs boson in the canonical realization of the Salam-Weinberg theory.** Beg, M.A.B.; Panagiotakopoulos, C.; Sirlin, A. (The Rockefeller University, New York, New York 10021). *Physical Review Letters;* **52**: No. 11, 883-886(12 Mar 1984). Contract AC02-81ER40033.

It is shown that, for a wide range of top-quark masses, the Higgs mass in the canonical realization of the Salam-Weinberg theory must be < or $\approx$125 GeV. The considerations are predicated on the premise that the pure λphi^4 theory is a free-field theory. The bound emerges as a necessary condition, albeit within a specific scenario, to avoid the trap of a trivial Higgs sector.

29646 **Doubly strange dibaryon in the chiral model.** Balachandran, A.P.; Barducci, A.; Lizzi, F.; Rodgers, V.G.J.; Stern, A. (Physics Department, Syracuse University, Syracuse, New York 13210). *Physical Review Letters;* **52**: No. 11, 887-890(12 Mar 1984). Contract AC02-76ER03533.

It is shown that the chiral model with SU(3) flavor symmetry predicts a dibaryon state of low mass M (Mroughly-equal2x2 GeV). It is electrically neutral and is an SU(3) singlet with J/sup P/ = 0^+. It corresponds to a six-quark state found in the MIT bag model by Jaffe. It is also shown that there is no stable particlelike state of baryon number 2 which is based on Skyrme's spherically symmetric ansatz for the chiral field.

29647 **Gluino decays and experimental signatures.** Haber, H.E. (California Univ., Santa Cruz; Stanford Linear Accelerator Center, CA); Kane, G.L. (Michigan Univ., Ann Arbor). *Nuclear Physics* [*Section*] *B;* **232**: No. 2, 333-348(6 Feb 1984).

Supersymmetry could be revealed by the discovery of gluinos, the supersymmetric partners of the gluons. Previously, it has been assumed that gluinos decay entirely into q anti q γ tilde (or gGAMMA tilde if a goldstino GAMMAtilde exists) where the photino γ tilde is assumed to be the lightest supersymmetric particle. We point out that the C-violating decay vertical strokeγ tilde -> g γ tilde could be competitive if there is sufficient mass splitting between the scalar partners of the left- and right-handed quarks. We also consider four-body gluino decay modes which under certain conditions could dominate, and we relax the usual assumption of massless photinos. We discuss the phenomenological implications of these new modes and indicate the effects on possible experimental signatures of supersymmetry; when the g γ tilde mode is large it greatly improves the possibilities for detecting gluinos in both collider and beam dump experiments, perhaps even allowing detection of individual events at colliders. 32 references.

29648 **Fine- and hyperfine structure analysis of heavy quarkonia: (banti b)- and (tanti t)-states.** Steiger, A.D. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Physics Letters,* [*Section*] *B;* **129**: No. 5, 335-340(29 Sep 1983).

The fine- and hyperfine of (banti b)-states is analyzed in a spin-dependent one-parameter potential model. Since this model reproduces the observed masses and leptonic widths of the upsilon family with remarkable accuracy, it is used to predict properties of toponium for a recently suggested t-quark mass of 35 GeV.

29649 **Meson radiation from a quark-gluon plasma by fission of chromoelectric flux tubes.** Banerjee, B.; Glendenning, N.K.; Matsui, T. (California Univ., Berkeley (USA). Div. of Nuclear Science; Lawrence Berkely Lab., CA (USA)). *Physics Letters,* [*Section*] *B;* **127**: No. 6, 453-457(11 Aug 1983).

The chromoelectric flux tube model is used to obtain a dynamical description of the evaporation of mesons from a quark-gluon plasma. The radiation pressure is computed to assess wether this process is an important mode for the disassembly of a compressed plasma. A new result for the rate of qanti q pair creation, which is the mechanism for fission of the tube, is employed.

29650 **Status of theories of CP noninvariance.** Deshpande, N.G. (University of Oregon Eugene, OR 97403). pp 531-541 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract AT06-76ER70002.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter reviews different gauge models of CP nonconservation. Shows that when both experimental and theoretical constraints are imposed, the Kobayashi-Maskawa model is the most acceptable theory. Discusses gauge theories of CP noninvariance; CP violation through Higgs bosons; CP phenomenology in the K-system; the difficulty with the Weinberg model; CP violation through heavy gauge bosons; and the strong CP problem. Finds that CP violation arising purely from Higgs sector or heavy gauge

boson exchange, though not completely ruled out, is rather unlikely.

29651 **Small and an invisible axion as automatic consequences of grand unification.** Hall, L.J. (Lawrence Berkeley Laboratory Berkeley, CA 94720). pp 561-569 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract W-7405-ENG-48.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter explores the possibility of solving the strong CP problem in a grand unified theory in which a global Peccei-Quinn (PQ) symmetry is an automatic consequence of the gauge structure. Points out that the low energy effective theory differs from that of the standard model only by the presence of an extremely light, weakly interacting axion. Describes 4 models which incorporate the PQ mechanism. The simplest model has two SU(2) doublets of scalar particles, but predicts a light pseudo-Goldstone boson (PGB), the axion, which has yet to be experimentally confirmed. The second model removes such an axion, at the expense of introducing a new fine tuning problem. This is resolved by embedding the model in a grand unified theory (GUT). Gives a GUT which seeks to explain the origin of U(1)PQ. Discusses two aspects of gauge theories which are considered by many to be undesirable; namely, global symmetries and the fine tuning of parameters of the theory.

29652 **Flavor mixings and flavor unifications.** Kang, K. (Brown University Providence, RI 02912). pp 571-593 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract AC02-76ER03130.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter discusses the problem of flavor mixing and calculability of the mixing parameters along the line of naturality group approach in the context of electroweak gauge theories. Examines flavor unification in SU(7) grand unification models. Applies the projection operator method to give eigenvalues of subgroup branches including those of U(1)'s, from which the hypercharge operators are constructed for all distinct and physically interesting modes of symmetry-breaking. Compares fermion contents in two different flavor unification schemes of SU(7). Discusses natural flavor conservation; mass matrix and mixing angles; calculability; and natural flavor conservation and calculability.

29653 **Initial state interactions, factorization, and the Drell-Yan process.** Bodwin, G.T. (S.L.A.C., Stanford University Stanford, CA 94305). pp 513-529 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—).

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter presents results of some work done in collaboration with S.J. Brodsky and G.P. Lepage in which the effects of initial state interactions in the Drell-Yan process were investigated. Discusses elastic interactions; gluon bremsstrahlung; and other processes. Predicts two important effects arising from initial state interactions in the Drell-Yan process at large Q^2. Notes that these predictions do not depend critically upon the detailed nature of the color-changing active-spectator interaction, and that they seem to be based on rather general concepts like conservation of flux (unitarity) and the uncertainty principle, which apply outside the domain of perturbation theory. Suggests that initial and final state interactions occur quite generally in inclusive hadronic processes.

29655 **Constraints on the interactions of Majorana particles from CPT invariance.** Khare, A.; Oliensis, J. (Fermi National Accelerator Laboratory, Batavia, Illinois 60510). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 7, 1542-1543(1 Apr 1984). Contract W-31-109-ENG-38.

We derive a constraint on the gravitational interaction of a Majorana particle from CPT invariance, following the work of Kayser and Goldhaber on the electromagnetic form factor. Similar constraints hold for the decay of an integer spin particle into two identical Majorana particles. Lastly we attempt to clarify the role played by CPT invariance in deriving these and the previous results.

29658 **(IC—82/188) Response and normal modes of a system in the electric and magnetic-dipole approximation.** Obada, A.S.F.; Mahran, M.H. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701667.

The effect of making the interaction fields evolve from a finite time of a system of molecules is studied in the electric- and magnetic-dipole approximation. Features due to the breaking up of the infinite evolution time are discussed. The resulting equations are analyzed for the response of the system. The analysis of the equations for the propagation of normal modes is manifested. The conditions under which normal modes propagate are stated.

29659 **(IC—82/230) Finiteness of broken N=4 super Yang-Mills theory.** Namazie, M.A.; Salam, A.; Strathdee, J. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701668.

Using a light cone gauge formulation for N=4 extended supersymmetry, it is shown that an explicit breaking of the supersymmetry by addition of mass terms does not disturb off-shell finiteness to any order provided the sum of fermion masses equals the sum of scalar masses and appropriate cubic interactions between scalars are included.

29660 **(IC—82/234) Van der Waals-like forces in spontaneously broken supersymmetries.** Radescu, E.E. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701669.

In spontaneously broken rigid supersymmetry, Goldstone fermion pair exchange should lead to a universal interaction between massive bodies uniquely fixed by the existing low energy theorem. The resulting van der Waals-like potential is shown to be $V(r)=Mm\pi^{-3}F^{-4}r^{-7}+O(r^{-8})$, where M,m are the masses of the interacting bodies while $\sqrt{F}$ is the scale of the breaking. The change in the situation when the supersymmetry is promoted to a local one is briefly discussed.

29661 **(IC—83/22) Sketch to the geometrical N=2-d=5 Yang-Mills theory over a supersymmetric group-manifold - I.** Borges, M.; Pio, G. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701670.

This work concerns the search and the construction of a geometrical structure for a supersymmetric N=2-d=5 Yang-Mills theory on the group manifold. From criteria established throughout this paper, we build up an ansatz for the curvatures of our theory and then solve the Bianchi identities, whose solution is fundamental for the construction of the geometrical action.

29662 **(IC—83/36) Elementary representations and interwining operators for SU(2,2) - I.** Dobrev, V.K. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1983. 61p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84701673.

The structure of the group SU(2,2) and of its Lie algebra is studied in detail. The results will be applied in subsequent parts devoted to the explicit construction of elementary representations of SU(2,2) induced from different parabolic subgroups and of the intertwining operators between these representations. A summary of some results of Parts II and III is given.

29663 **(IC—83/42) Nelson's stochastic quantization of free linearized gravitational field and its Markovian structure.** Lim, S.C. (International Centre for Theoretical Physics, Trieste (Italy)). May 1983. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701666.

It is shown that by applying Nelson's stochastic quantization scheme to free linearized gravitational field tensor one can associate with the resulting stochastic system a stochastic tensor field which coincides with the "space" part of the Riemannian tensor in Euclidean space-time. However, such a stochastic field fails to satisfy the Markov property. Instead, it satisfies the reflection positivity. The Markovian structure of the stochastic fields associated with the electromagnetic field is also discussed.

29664 **(IC—83/54) Hamiltonian structures of some nonlinear evolution equations.** Tu, G.Z. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1983. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701672.

The Hamiltonian structure of the O(2,1) non-linear sigma model, generalized AKNS equations, are discussed. By reducing the O(2,1) non-linear sigma model to its Hamiltonian form some new conservation laws are derived. A new hierarchy of non-linear evolution equations is proposed and shown to be generalized Hamiltonian equations with an infinite number of conservation laws.

29665 **(INIS-BR—105) Hamiltonian formulation of QED in the superaxial gauge.** Girotti, H.O. (Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica); Rothe, H.J. (Heidelberg Univ. (Germany, F.R.). Inst. fuer Theoretische Physik). (Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica). 1984. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701922.

A Hamiltonian formulation of QED in a fully fixed axial gauge is presented. The equal-time commutators for all field variables are computed and are shown to lead to the correct equations of motion. The constraints and gauge conditions hold as strong operator relations.

29666 **(INIS-mf—8921, pp 86) Complex Rishon-type unification.** Davidson, A.; Sonnenschein, J. (Weizmann Inst. of Science, Rehovoth (Israel). Dept. of Nuclear Physics). 1983. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780235. (CONF-8303128—Summ.). TI84780235

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29667 **(INIS-mf—8921, pp 88) Do 't Hooft anomaly equations know about Georgi-Glashow grand unification.** Davidson, A.; Sonnenschein, J. (Weizmann Inst. of Science, Rehovoth (Israel). Dept. of Nuclear Physics). 1983. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780235. (CONF-8303128—Summ.). TI84780235

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29668 **(JINR—E-2-83-301) Why different forms of the light cone expansion.** Bordag, M.; Robaschik, D.; Geyer, B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701648.

Different types of light-cone expansions are traced back to an operator identity proved by S. A. Anikin and O. I. Zavialov. As a new type of light-cone expansion, a nonlocal conformal one, is proposed and applied to a nonforward scattering process. It is shown that the anomalous dimensions of the corresponding light-cone operators are diagonal in one of the two parameters to all orders of perturbation theory. This leads to one-parameter evolution equations. For simplicity all considerations here are based on scalar field theory.

29669 **(JINR—E-5-83-228) Interpolation by Pade approximants.** Bogdanova, N.; Nichitiu, F. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701649.

The interpolation problem for error affected complex functions in order to best extrapolate them in the cutcomplex plane is studied. The methods used for interpolation are the diagonal and near-diagonal Pade approximants (PA) of the second type (PA2) and their modification for the chi^2 minimization (PA3). The general interpolation problem for error affected functions is formulated. Using some numerical examples, it is shown that there exists an optimum set of interpolating points. The connection between the PA3 and the PA2 for this optimum set of interpolating points is revealed. To conclude, in the interpolation problem for error affected complex functions there exists an optimum set of interpolating points which can give the best PA in the PHI^2 sense, and here a practical method for finding it is proposed.

29670 **(JINR-R—2-83-157) Electromagnetic radiation during the flight of relativistic particles through a small section of the force field.** Bonch-Osmolovski, A.G.; Lyuboshits, V.L.; Podgoretski, M.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701652.

The low frequency part of the spectrum of the electromagnetic radiation arising at a change of the velocity direction of an ultrarelativistic charged particle within certain section of a force field of finite length l is investigated. It is shown that the correction to the spectrum-angular density of radiation corresponding to an instantaneous change of velocity has a magnitude of an order of (l/Lsub(phi)), where Lsub(phi)=2cγsup(2)/ω(1+γsup(2)thetasup(2)) is the formation length, ω is the radiation frequency, γ is the Lorentz-factor, theta is the angle between the longitudinal velocity of a particle and the direction of radiation. An the same time the correction to the spectrum density, after integrating over angles, turns out to be proportional to the length of an intermediate interval, but not to the square of this length.

29671 **(JINR-R—11-83-329) Structure of matrices in the method of boundary integral equations for the Laplace operator.** Zhidkov, E.P.; Khoromskij, B.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701650.

The structure of matrices occuring at discretization of boundary integral equations for Laplace operator for the cases of one and two space variables is considered. It is shown that for some regions with boundaries having parallel elements the corresponding matrices have the special block structure, which allows one to decrease considerably the amount of computer necessary to store these matrices. The results may be used for accelerating the direct as well as iterative methods of solution of corresponding linear systems of algebraic equations.

29672 **(JINR-R—17-83-33) Some specific properties of scattering on solitons in the model of current-current interaction. Soliton form factor in the kinematic region of t in the range of [0,4m²] momenta.** Grishin, V.E.; Fedyanin, V.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701651.

In the framework of semiphenomenological approach the structure of vertex function for "soliton current" is investigated, soliton form factor is calculated for a model with Usub(Q)(1)-symmetry. It is shown that the obtained dependence on the model relativistic invariants leads to the existence of poles in the kinematic region of q^2 in the range of (0.4 m^2) momenta. The connection is found between poles and resonance states. Each separate peak taking into account a background phase shift is a resonance of Breit-Wigner type.

29673 **(LA-UR—84-1311) Fun with supersymmetric quantum mechanics.** Freedman, B.; Cooper, F. (Illinois Univ., Urbana (USA). Dept. of Physics; Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 21p. (CONF-831267—4). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011329.

From Workshop on supersymmetry in physics; Los Alamos, NM, USA (15 Dec 1983).

One reason for studying supersymmetric quantum mechanics is that there are a class of superpotentials W(x) which behave at large x as x/sup α/ for which we know from general arguments whether SUSY is broken or unbroken. Thus one can use these superpotentials to test various ideas about how to see if supersymmetry is broken in an arbitrary model. Recently, Witten proposed a topological invariant, the Witten index Δ which counts the number of bosons minus the number of fermions having ground state energy zero. Since if supersymmetry is broken, the ground state energy cannot be zero, one expects if Δ is not zero, SUSY is preserved and the theory is not a good candidate for a realistic model. In this study we evaluate Δ for several examples, and show some unexpected peculiarities of the Witten index for certain choice of superpotentials W(x). We also discuss two other nonperturbative methods of studying supersymmetry breakdown. One involves relating supersymmetric quantum mechanics to a stochastic classical problem and the other involves considering a discrete (but not supersymmetric) version of the theory and studying its behavior as one removes the lattice cuttoff. In this survey we review the Hamiltonian and path integral approaches to supersymmetric quantum mechanics. We then discuss the related path integrals for the Witten Index and .for stochastic processes and show how they are indications for supersymmetry breakdown. We then discuss a system where the superpotential W(x) has assymetrical values at +- ∞. We finally discuss nonperturbative strategies for studying supersymmetry breakdown based on introducing a lattice and studying the behavior of the ground state energy as the lattice cutoff is removed. 17 references.

29674 **(SLAC-PUB—3263) Applied chromodynamics.** Brodsky, S.J. (Stanford Linear Accelerator Center, CA (USA)). Nov 1983. Contract AC03-76SF00515. 34p. (CONF-8305187—2). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84009136.

From 23. Cracow school of theoretical physics; Zakopane, Poland (30 May 1983).

A number of novel features of QCD are reviewed, including the consequences of formation zone and color transparency phenomena in hadronic collisions, the use of automatic scale setting for perturbative predictions, null-zone phenomena as a fundamental test of gauge theory, and the relationship of intrinsic heavy colored particle Fock state components to new particle production. We conclude with a review of the applications of QCD to nuclear multiquark systems. 74 references.

29675 **Gravitational gauge fields and the cosmological constant.** Pagels, H.R. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305 and The Rockefeller University, New York, New York 10021). *Physical Review [Section] D: Particles and Fields;* **29**: No. 8, 1690-1698(15 Apr 1984). Contract AC03-76SF00515;AC02-81ER40033.

We describe field theories for which the action is completely independent of the metric and connection of the space-time manifold. The metric in our approach is no more a fundamental field than a hadron field is a fundamental field in QCD. The fundamental fields in the action are O(5) gauge fields and combinations of these fields are interpreted as the metric and connection so that conventional general relativity is obtained. Remarkably, all renormalizable matter actions for scalar, spinor, and Yang-Mills gauge fields can be made metric independent. Significantly, we find a new elementary invariance of the action which implies the cosmological constant must vanish. Finally, we discuss the quantum theory resulting from these ideas.

29676 **Casimir energy of Higgs-field configurations in a Coleman-Weinberg-type theory.** Aoyama, H. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **29**: No. 8, 1763-1771(15 Apr 1984). Contract AC03-76SF00515.

The Casimir energy, the quantum correction part of the energy, of a class of space-dependent scalar field configurations is examined in a Coleman-Weinberg-type λphi⁴ theory in the d-dimensional regularization scheme. For the cases when the scalar field is dependent on only one space coordinate and partially excludes its fluctuations from a region of space, we develop formulas effective for evaluating the full one-loop Casimir energy. As an application, we evaluate a simple case and find that the Casimir energy yields the familiar quantum correction to the volume energy, an extra surface energy whose coefficient is finite for d< or =4, and a finite, exponentially small attractive term. It is shown that the divergences for d> or =5 are due to sharp boundaries of the conf'guration.

29677 **More uses for Wilson loops: Perturbation theory without Feynman diagrams.** Celmaster, W.; Kovacs, E. (Department of Physics, Northeastern University, Boston, Massachusetts 02115). *Physical Review [Section] D: Particles and Fields;* **29**: No. 8, 1772-1783(15 Apr 1984). Contract W-31-109-ENG-38.

For many arbitrary lattices with arbitrary SU(N) actions, it is easy to estimate the perturbative value of Λ/sub latt//Λ/sub MOM/ without calculating any Feynman diagrams. This observation, first made by Creutz, is based on the fact that perturbative expansions of Wilson loop ratios can be trivially extracted from Monte Carlo data at large β. Here, we extend Creutz's results to general loop ratios including those of polygons and parallelograms encountered on nonstandard lattices. In particular, we analytically compute the lowest-order quantum corrections to these loop ratios, discuss which ratios are free from divergences, and give specific Monte Carlo examples.

29678 **Strong magnetic field in spontaneously broken gauge theories.** Chakrabarti, J. (Institute of Theoretical Science, University of Oregon, Eugene, Oregon 97403). *Physical Review [Section] D: Particles and Fields;* **29**: No. 8, 1859-1860(15 Apr 1984). Contract AT06-76ER70004.

We make a few observations about the calculations of effective potentials of spontaneously broken gauge theories, in the pres-

ence of a strong magnetic field, by summation over vacuum energies.

29679 **Mass inequalities in quantum chromodynamics.** Nussinov, S. (Center for Theoretical Physics, Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742). *Physical Review Letters;* **52**: No. 12, 966-969(19 Mar 1984).

By use of variational arguments and flavor independence, p mass inequalities are derived between ground-state mesons, m/sub x/y-bar> or =(1/2)(m/sub xx/+m/sub yy/), and baryons, m/sub x/yy> or =(1/2)(m/sub xxy/+m/sub yyy/). .AE

29680 **Modification of predictions of grand unified theories in the presence of spontaneous compactification.** Shafi, Q.; Wetterich, C. (Bartol Research Foundation, University of Delaware, Newark, Delaware 19716). *Physical Review Letters;* **52**: No. 11, 875-878(12 Mar 1984). Contract AC02-78ER05007.

There are speculations that grand unified theories (GUT's) may arise from higher-dimensional models of gravity in which the extra dimensions are spontaneously compactified. The GUT predictions for proton decay and $\sin^2\theta$/sub w/ can be significantly modified when nonrenormalizable interactions, scaled by inverse powers of the compactification scale M/sub c/, are added to the standard GUT Lagrangian. For example, the decay rate for $p \to e^+\pi^0$ in minimal SU(5) can be lowered by one (two) orders of magnitude if M/sub c/ is on the order of 10^{17} GeV. However, $\sin^2\theta$/sub W/ then decreases by 0.005 (0.01). The SO(10) model is also discussed.

29681 **Chiral symmetry and the bag model: A new starting point for nuclear physics.** Thomas, A.W. (Division TH, CERN 1211 Geneva 23). *Advances in Nuclear Physics;* **13**: 1-137(1984). Contract AC02-76ER03074.

This chapter attempts to give the reader a fairly good working knowledge of the MIT bag model, as well as a degree of familiarity with chiral symmetry. Offers a detailed summary of the model, its underlying assumptions, its solutions, its predictions for the properties of single hadrons, and its unresolved problems. Explains the concept of chiral symmetry and why it must be broken in nature even though it is exact in pure QCD. Reviews the various attempts which have been made over the last 3 yrs. to make a bag model incorporating chiral symmetry. Discusses the basic bag model; the spectroscopy of low-lying states; attempts to derive a bag model; the relationship to nonrelativistic quark models; hadronic properties in the MIT bag model; charge radii; magnetic moments; the axial current; center of mass corrections; chiral symmetry; Lagrangian formulation of the MIT bag model; conserved currents in Lagrangian field theory; the axial current; the σ-model and spontaneous symmetry breaking; bag models with chiral symmetry; motivation; the work of Chodos and Thorn; the cloudy bag model; applications of the cloudy bag model; a Hamiltonian for low- and medium-energy physics; the nucleon; pion-nucleon scattering; magnetic moments of the nucleon octet; a new view of nuclear physics; the nucleon-nucleon force; symmetry breaking as a clue; and the nuclear many-body problem. Identifies the need to firmly establish a relationship between the MIT bag model, soliton bag models, and QCD.

29682 **Singularities in the perturbative QCD treatment of the photon structure functions.** Rossi, G. (Lawrence Berkely Lab., CA (USA); California Univ., Berkeley (USA). Dept. of Physics). *Physics Letters,* [*Section*] *B;* **130**: No. 1/2, 105-108(13 Oct 1983).

The perturbative QCD expansion for the calculable part of the Bjorken limit photon structure functions is shown to be affected by power singularities at $x = 0$ which spoil its convergence. Limitations on the calculability of the structure functions due to such singularities are discussed.

29683 **Supercomplimentarity in massless supersymmetric QCD.** Taylor, T.R. (Fermi National Accelerator Lab., Batavia, IL (USA)). *Physics Letters,* [*Section*] *B;* **128**: No. 6, 403-406(8 Sep 1983).

The presence of at least one supersymmetric phase is established for the strongly interacting SU(N) gauge theory with n flavors of massless matter in the N + anti N representation of the gauge group.

29684 **Numerical studies of gauge field theories.** Creutz, M.J. (Physics Dept., Brookhaven National Laboratory, Upton, NY 11973). pp 119-156 of The unity of the fundamental interactions. Zichichi, A. New York, NY; Plenum Publishing Corp. (1983). (CONF-810762—). Contract AC02-76CH00016.

From 19. international school of subnuclear physics; Erice, Italy (31 Jul 1981).

This chapter examines the application of Monte Carlo simulation of statistical systems by particle theorists to quantized gauge field theories. Finds strong numerical evidence that the standard SU(3) non-Abelian gauge theory of the strong interaction is capable of simultaneously confining quarks into the physical hadrons and exhibiting asymptotic freedom, the phenomenon of quark interactions being small at short distances. Describes experiments and implications of the results for strong interaction physics. Discusses the model; the string tension; the continuum limit and the renormalization group; phase transitions; and variants on the Wilson action. Attempts to show that lattice gauge theory is an exciting and a rapidly evolving technique for the particle physicist. Points out that the main obstacle at this stage is the inclusion of light quarks. Presents discussions featuring Morgan, Creutz, Karliner, Coleman, Teller and others.

29685 **Gauge theories of quark confinement in 2+1 dim: A comparative study of SU(2) Yang-Mills and Yang-Mills-Higgs systems.** Wadia, S.R. (The Enrico Fermi Inst. The University of Chicago, Chicago, IL 60637). pp 673-691 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract AC02-80ER10558.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter summarizes some recent work on the confinement problem in 2+1 dim. Reviews the Debye-Hueckel screening mechanism of confinement in the Yang-Mills-Higgs system due to Polyakov. Uses the Polyakov model and D'Hoker's Monte-Carlo results as a guide to construct the vacuum of the pure SU(2) gauge theory in terms of adjoint monopoles. The mechanism of quark confinement in the pure gauge theory is the one proposed by Wilson, Kogut and Susskind. Finds that a vacuum of adjoint monopoles does lead to a correct screening theory in the sense that only SU(2) representations with non-trivial Z_2 charges are confirmed, unlike compact QED_3 where all representations are confined. Concludes that using the presented preliminary ideas, it may be possible to prove confinement in this model and apply the same sort of idea for 3+1 dimensions.

29686 **Hadronic wave functions and high momentum transfer interactions in quantum chromodynamics.** Brodsky, S.J.; Huang, T.; Lepage, G.P. (Stanford Linear Accelerator Center Stanford, CA 94305). pp 143-199 of Particles and fields. Capri, A.Z.; Kamal, A.N. New York, NY; Plenum Publishing Corp. (1983). (CONF-810882—). Contract AC03-76SF00515.

From 1981 Banff summer institute on particles and fields; Calgary, Alberta, Canada (16 Aug 1981).

This chapter emphasizes the utility of a Fock state representation of the meson and baryon wave functions as a means not only to parametrize the effects of bound state dynamics in QCD phenomena, but also to interrelate exclusive, inclusive, and higher twist processes. Discusses hadronic wave functions in QCD, measures of hadronic wave functions (form factors of composite systems, form factors of mesons, the meson distribution amplitude); large momentum transfer exclusive processes (two-photon processes); deep inelastic lepton scattering; and the phenomenology of hadronic wave functions (measures of hadron wave functions, constraints on the pion and proton valence wave function, quark jet diffraction excitation, the "unveiling" of the hadronic wave function and intrinsic charm). Finds that the testing ground of perturbative QCD where rigorous, definitive tests of the theory can be made can now be extended throughout a large domain of large momentum transfer exclusive and inclusive lepton, photon, and hadron reactions.

6455 Scattering Theory

29687 **(JINR-R—4-83-135) Calculation of two-center Coulomb scattering phases with the use of asymptotic expansions for irregular Coulomb spheroidal c-type functions.** Velikov, V.P.; Ivanov, K.I.; Marinov, A.T. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701655.

A new method is proposed for calculating the Coulomb phases for scattering off two centers and of the normalization factors of the regular two-center Coulomb functions which satisfy a properly set condition at the origin. The numerical algorithm utilizes asymptotic expansions for the irregular c-type two-center Coulomb wave functions. This algorithm has been reatized in a FORTRAN program, which enabtes one to calculate phases and the normalization factors with the accuracy up to ten decimal places. Comparison of our method with others for calculating the Coulomb phases for scattering off two centers has shown that the same accuracy is reached by our method at a much faster rate and, likewise, for the same amount of computer time the accuracy is better in 4-5 places.

From 23. conference on nuclear spectroscopy and nuclear structure; Moscow, USSR (19 Apr 1983).

29690 **(LA-UR—84-1026) Preliminary proposals for extending the ENDF format to allow incident charged particles and energy-angle correlation for emitted particles.** MacFarlane, R.E.; Stewart, L.; Hale, G.M.; Dunford, C.L. (Los Alamos National Lab., NM (USA)). Apr 1984. Contract W-7405-ENG-36. 85p. (CONF-8404130—1). NTIS, PC A05; 3; GPO Dep. Order Number DE84009983.

From International Atomic Energy Consultants meeting on format for the exchange of evaluated neutron nuclear data; Vienna, Austria (1 Apr 1984).

Paper copy only, copy does not permit microfiche production.

This rewrite of Data Formats and Procedures for the Evaluated Nuclear Data File, ENDF pertains to the latest version, ENDF/B-VI. Earlier versions provided representations for neutron cross sections and distributions, photon production from neutron reactions, a limited amount of charged-particle production from neutron reactions, photo-atomic interaction data, thermal neutron scattering data, and radionuclide production and decay data (including fission products). This version allows higher incident energies, adds more complete descriptions of the distributions of emitted particles, and provides for incident charged particles and photo-nuclear data by partitioning the ENDF library into sublibraries. Decay data, fission product yield data, thermal scattering data, and photo-atomic data have also been formally placed in sublibraries. In addition, this rewrite represents an extensive update to the Version V manual.

29691 **(LBL—16281) Proceedings of the 6th high energy heavy ion study and 2nd workshop on anomalons.** (Lawrence Berkeley Lab., CA (USA)). Dec 1983. Contract AC03-76SF00098. 617p. (CONF-830675—). NTIS, PC A99/MF A01; GPO Dep. Order Number DE84005862.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

REFER ALSO TO CITATION(S) 29133, 30089

29692 **(KFK—3553) Statistical inference of level densities from resolved resonance parameters.** Froehner, F.H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Schneller Brueter). Aug 1983. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751291.

Level densities are most directly obtained by counting the resonances observed in the resolved resonance range. Even in the measurements, however, weak levels are invariably missed so that one has to estimate their number and add it to the raw count. The main categories of missinglevel estimators are discussed in the present review, viz. (I) ladder methods including those based on the theory of Hamiltonian matrix ensembles (Dyson-Mehta statistics), (II) methods based on comparison with artificial cross section curves (Monte Carlo simulation, Garrison's autocorrelation method), (III) methods exploiting the observed neutron width distribution by means of Bayesian or more approximate procedures such as maximum-likelihood, least-squares or moment methods, with various recipes for the treatment of detection thresholds and resolution effects. The language of mathematical statistics is employed to clarify the basis of, and the relationship between, the various techniques. Recent progress in the treatment of resolution effects, detection thresholds and p-wave admixture is described.

29693 (LBL—16281, pp 81-82) **Detector for the measurement of projectile fragment interaction cross sections.** Dufour, J.P.; Girard, J.G.; Lindstrom, P.J.; Greiner, D.E.; Olson, D.L.; Symons, T.J.M.; Crawford, H.J. (Univ. of California, Berkeley). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A detector is being developed to measure the charge changing cross sections of secondary and tertiary projectile fragments produced in relativistic heavy ion collisions. This device is designed to provide a high statistics, electronic, analog to the measurements that have been made recently using plastic track detectors. If the detector is succesful and the anomalous component present in projectile fragmentation is observed, we intend to use the device in combination with the HISS spectrometer as a filter to study further the anomalous fragments.

29694 (LBL—16281, pp 83-85) **Development of a segmented Cerenkov detector for study of the "anomalon" phenomenon.** Stevenson, J.D.; Musser, J.A.; Barwick, S.W. (Univ. of California, Berkeley). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We plan to look for the anomalon effect using a stack of thin plastic Cerenkov paddles, each of which provides an independent measurement of the projectile fragment charge. Determination of the projectile fragment charge by measurement of the intensity of Cerenkov radiation is superior to ionization measurements because it is insensitive to fragments below the Cerenkov threshold of ~ 310 MeV/nucleon. Low-energy fragments represent a real danger in analysis of ionization-type experiments since fragments coming to

the end of range can mimic nuclear interactions. The chief disadvantage of the use of Cerenkov detectors is their feeble light output. The charge resolution of thin Cerenkov detectors is thus invariably limited by photon counting statistics and efficient light collection schemes are required to achieve satisfactory charge resolution.

29695 **(BONN-HE—83-13) ^{3}He electromagnetic form factors: A simple theoretical approach.** Bartnik, E.A.; Haberzettl, H.; Sandhas, W. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Sep 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751293.

We derive an approximate formula for the charge form factor of ^{3}He, which is applicable for values of the squared momentum transfer larger than 6 fm^{-2}. Our result explicitly expresses the form factor in a very simple and direct way by the underlying two-body potentials.

29696 **(BONN-HE—83-14) Measurement of coherent pion-photoproduction on the ^{3}He/^{3}H isodublett.** Hartfiel, J.; Hilger, S.; Mutius, R.; Bellinghausen, B.; Gassen, H.J.; Noeldeke, G.; Reese, E.; Reichelt, T.; Stipp, P. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Sep 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751292.

The authors describe the measurement of the differential cross sections for coherent photoproduction of π^0 on ^{3}He and ^{3}H and π^+ on ^{3}He in the Δ resonance region.

Recent result obtained by electron scattering in the few-nucleon systems (A <= 4) are presented. In particular, new experimental data have measured the tensor polarization, the magnetic form factor and the electrodisintegration of deuterium. A brief overview of the experimental situation is given together with a status of the theoretical interpretation. ^{3}He charge and magnetic form factors are discussed. New theoretical results indicate that three body forces improve considerably the saturation properties of ^{3}He, ^{4}He and nuclear matter, but are not able to reconcile experiment and theory for the charge form factors of ^{3}He and ^{4}He. Calculations of meson exchange effects with different theoretical approaches bring the theory into reasonable agreement with the experimental charge and magnetic form factor fo ^{3}He. Recent results of the measurements of the two and three body break-up of ^{3}He are discussed.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A search for anomalous behaviour in the interactions of secondary particles produced in deuteron-deuteron collisions is described. This note reports our finding from a scan of bubble-chamber film taken at the Alternating Gradient Synchrotron at Brookhaven. The experiment (No. 341), a Princeton-Rutgers collaboration, exposed the BNL 80-in. deuterium bubble chamber to an almost pure (≧ 97%) beam of 7.9-GeV/c deuterons. Results are reported; the data do not support anomalon production. (WHK)

29711 **Isospin dependence of pion absorption on nucleon pairs at T/sub π/ = 65 MeV.** Moinester, M.A.; Gill, D.R.; Vincent, J.; Ashery, D.; Levenson, S.; Alster, J.; Altman, A.; Lichtenstadt, J.; Piasetzky, E.; Aniol, K.A. (TRIUMF, Vancouver, British Columbia, Canada V6T2A3). *Physical Review Letters;* **52**: No. 14, 1203-1206(2 Apr 1984).

Angular distributions of differential cross sections were measured for the first time for pion absorption on a T = 1, S = 0 nucleon pair and for absorption on a T = 0, S = 1 pair in the ^{3}He nucleus. A large isospin dependence is observed in the differential cross sections. The ratio of cross sections $\sigma(^3\mathrm{He}(\pi^+,2p))/\sigma(^3\mathrm{He}(\pi^-,pn))$ is 15.3 +- 1.2. The results show evidence of an isoscalar component of the final state in the reaction $^3\mathrm{He}(\pi^-,pn)n$, which cannot be mediated by Δ resonance formation.

29712 **Upper limit on the isovector parity-violating decay width of the 0^+ T = 1 state of ^{6}Li.** Robertson, R.G.H.; Dyer, P.; Melin, R.C.; Bowles, T.J.; McDonald, A.B.; Ball, G.C.; Davies, W.G.; Earle, E.D. (Cyclotron Laboratory and Physics Department, Michigan State University, East Lansing, Michigan 48824). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 755-763(Mar 1984).

A search has been made for a resonance in the $^2\mathrm{H}(\alpha,\gamma)$ ^{6}Li capture-reaction cross section at the energy corresponding to the 0^+, T = 1, 3.56-MeV state of ^{6}Li. None was found, and an upper limit of 6.5 x 10^{-7} eV was set on the parity-forbidden α width at the 90% confidence level. This limit is three orders of magnitude smaller than the best previous measurement.

29713 **Structure of the ^{3}H→n+d(d/sup /) vertexes.** Gibson, B.F.; Lehman, D.R. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 1017-1032(Mar 1984).

Models of ^{3}H are constructed from $^1S_0$ and $^3S_1$-$^3D_1$ separable interactions fitted to low-energy two-nucleon properties. In particular, a set of $^3S_1$-$^3D_1$ interactions is used that produces D-wave components in the deuteron with P/sub D/ = 0% to 10%. The ^{3}H binding energy (B_3), ^{3}H wave function component percentages, ^{3}H→n+d(d() asymptotic normalization constants, ^{3}H→n+d distorted wave parameters, percentage n-d component in the ^{3}H wave function, and ^{3}H→n+d momentum distribution are calculated for each case. From these results, numerous aspects of the ^{3}H→n+d(d() vertexes are examined. As examples: (1) dependence of the S- and D-wave ^{3}H→n+d asymptotic norms on P/sub D/ and B_3; (2) dependence of the ^{3}H→n+d(asymptotic norm on the scattering length and effective range of the $^1S_0$ interaction; (3) role of the D-wave component of the ^{3}H→n+d momentum distribution for n-d relative momentum between 0 and 2 fm^{-1}; and (4) validity of approximating the ^{3}H→n+d distorted-wave parameter, D_3, by the ratio of the D- to S-wave asymptotic normalization constants. Where possible, comparisons are made with local-potential calculations and experiment.

29714 **Isospin dependence of pion absorption on nucleon pairs.** Silbar, R.R.; Piasetzky, E. (Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 1116-1118(Mar 1984).

The suppressed ratio of (π^-, pn) to (π^+, pp) pion absorption cross sections on /sup 3,4/He has an important contribution from NN′ intermediate states, where N′ denotes a P_{11} πN interaction. The order-of-magnitude energy variation of this ratio, from stopped pions to pions above the (3,3) resonance, is reproduced in calculations using a unitary isobar model. We predict a strong asymmetry in the angular distribution of the ratio at higher pion energies.

29715 **(CONF-8403112—5) O^+ reversible O^- transitions in A=16.** Garvey, G.T. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011709.

From International symposium on nuclear spectroscopy and nuclear interactions; Osaka, Japan (21 Mar 1984).

Portions are illegible in microfiche products.

Pseudoscalar matrix elements are of wide range interest to nuclear physicists at the present moment. The interest in these particular transitions is principally driven by the search for a predicted sizeable mesonic enhancement to the time-like part of the nucleonic axial current. This search has led to greatly improved experiments which have provided more precise determination of known O^+ to O^- transitions as well as measuring new ones. Also, there have been successful efforts to isolate the pseudoscalar part of J/sub i/ = J/sub f/, π/sub i/π/sub f/ = -1 transitions. Further, the theoretical analysis has become much more sophisticated with the inclusion of core polarization in both initial and final states. The bulk of this paper focuses on the O^+ to O^- transitions in A=16 as that is where our research has concentrated, but other cases are also cited. 33 references. (WHK)

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

This paper describes an experiment investigating the effect of anomalous short interaction mean free paths for fragments of relativistic heavy ions. We use a stack of CR39 plastic nuclear track detectors that was irradiated with 1.8 GeV/nucleon ^{40}Ar ions at the Berkeley Bevalac. About 1.5 . 10^{7} etch cones were measured in this experiment using an automatic measuring system. For 6444 nuclear collisions of fragments with charges 9-15 the interaction mean free path in the plastic was determined. This analysis cannot rule out the observations of enlarged cross sections for relativistic projectile fragments in the first centimeters after emission, but in contradiction to the experiments in nuclear emulsion the effect observed in our experiment is weaker and detectable only within the first centimeter. 10 references.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Anomalous nuclear projectile fragments, or "anomalons," were first observed in cosmic rays by nuclear emulsion as a rapid series of nuclear interactions in a short distance. They were later seen as a statistical anomaly in secondary mean-free-paths (mfp's) in cosmic rays, and most recently and convincingly observed in high-statistics experiments using Bevalac beams which showed short mfp's for secondary fragments measured within the first few centimeters after the primary interactions. Because of the controversial and provocative nature of these reports, an alternative technique with different systematic errors and methodology is essential to confirm and illuminate the anomalon phenomenon. CR-39 etched track detector provides this alternative. It allows sampling of the electric charge with high resolution at approximately 600 μm intervals along a nuclear track, and thus successive nuclear charge-changing interactions in short distances can be observed. We report here the observation of depressed secondary mfp's in the first centimeter or so beyond the primary interactions in CR-39, in agreement with the previous emulsion work.

29724 (LBL—16281, pp 23-26) **First results from a repeat experiment on the mean free path of projectile fragments from 1.88 A GeV ^{56}Fe - emulsion interactions.** Karant, Y.J.; Heckman, H.H.; Friedlander, E.M. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

In previous papers, we reported on results we had obtained on the mean free path (MFP) of secondary and later generation projectile fragments (PFs) from 1.88 A GeV ^{56}Fe primary nuclei incident on emulsion. We have repeated the experiment with careful systematic controls and report here our first results on the PF MFP.

29725 (LBL—16281, pp 27-42) **Mean free path of relativistic fragments from heavy ion reactions induced by 1.8A GeV ^{40}Ar in low sensitive nuclear emulsions.** Banaras; Chandigarh; Jaipur; Jammu; Lund. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Preliminary data is given for the mean free path of projectile-like fragments, $2 \leqq Z \leqq 18$, emitted in ^{40}Ar induced heavy ion reactions in nuclear emulsions at 1.8A GeV as well as in later generations of fragmentation chains. Only within a distance of one cm or less from the interaction point do we observe an enhanced collision frequency. If this observation is a signal of an anomalous fragmentation component this must have a very short mean free path or a lifetime less than 10^{-11} s. Some suggestions are given for systematic or statistical effects which could also possibly explain our results.

29726 (LBL—16281, pp 43-46) **Anomalous mean free path for Z=2 relativistic projectile fragments in emulsion.** El-Nadi, M.; Badawy, O.E.; El-Bakry, M.N.; Abdel-Salam, A.; El-Hamalawy, A.A.; Kaalil, E.I.; Mousa, A.M.; El-Nagdy, M. (Cairo Univ., Egypt). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The anomalous short mean free path (m.f.p.) of projectile fragments (p.f.) at small distances from emission vertex has been detected for fragments of $Z \geqq 3$ from different projectiles at energies up to $\simeq$ 2.0 A GeV. For $Z = 2$ fragments no clear cut conclusion is present. Here we report on some measurements of m.f.p. of $Z = 2$ ^{12}C p.f. at 4.5 GeV/C/N (the highest available momentum now). Two NIKFI-BR-2 nuclear emulsion stacks (10 cm x 20 cm x 600 μm pellicles dimensions), were tangentially irradiated with 4.5 GeV/C/N ^{12}C-ions and α-particles at the Synchrophasatron of the JINR, Dubna, USSR. 636, $Z = 2$ p.f.s. emitted in a 3^{0} cone were collected along the track scanning for the primary ^{12}C interactions. These p.f. were classified according to the number N/sub h/(N/sub h/ = number of heavily ionizing particles tracks) of the primary ^{12}C interaction events. Each p.f. was followed until it interacted or left the stack. The maximum path length detected for these p.f. amounts to $\simeq$ 150 mm. About 280 secondary interactions were collected.

29727 (LBL—16281, pp 47-50) **Are there anomalons at charge two: a comparison of helium induced primary and secondary interactions in nuclear research emulsion at about 2 GeV/nucleon.** Klein, N.; GanBauge, E.; Baagil, M.; Bieschke, U.; Killinger, F.; Kretschmer, R.; Laschek, A.; Weidner, W. (Philipps-Univ. Marburg, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A comparison of secondary α stars induced in emulsion by ^{56}Fe-primary beams at Bevalac energies of around 2 GeV/nucleon with primary stars of ^{3}He and ^{4}He of the same energy shows a clear difference in the asymmetry distribution of the target fragments as well as in the multiplicity distribution. Besides this a cut in

the data set of the secondaries at the distance D = 3 cm downstream from the emission point exhibits a special behaviour of the α-stars which are produced near to the primary star (D = 3 cm). A connection with the anomalon effect seems to be obvious.

29728 (LBL—16281, pp 51) **Behavior of secondary particles of charge two, three and four produced from relativistic heavy-ion collisions.** Jain, P.L.; Aggarwal, M.M.; El-Nagdy, M.S.; Ismail, A.Z.M.; Gomber, K.L. (State Univ. of New York, Buffalo). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We have used two small stacks of Ilford G-5 emulsion exposed to ^{56}Fe and ^{40}Ar beams at about 2 GeV parallel to the pellicles surfaces. Each pellicle was scanned by along-the-track method. We thus found about 6000 primary interactions from which about 6000 relativistic tracks of Z = 2 and about 800 tracks of Z = 3 and 4 emitted from the primary interactions within 0.2 rad forward cone were followed until they either interacted or left the stack. We observed about 850 secondary H/sub e/ interactions. The H/sub e/ fragments are easily identified by their distinct grain intensities (~ 4g min and for relativistic tracks it should not change within 2 cm of its path length followed from its production point) or by their δ-ray density measurements for Z = 2,3 and 4 fragments, the distance T available for its interaction in emulsion (the potential length) or if it interacted, the distance S to the interaction point was recorded. The mfp of interaction is given by λ = (Σ/sub i/d/sub i/)/N where Σ/sub i/d/sub i/ and N are the total path length of both interacting and noninteracting tracks and the number of interactions of the i particles within that path length interval, respectively. We shall discuss the mfp of H/sub e/ as a function of distances for different production angles and for Li and Be, we shall discuss mfp as a function of distance.

29729 (LBL—16281, pp 53-57) **Search for anomalons among singly charged relativistic particles from ^{16}O interactions at 2 GeV/nucleon.** Judek, B. (National Research Council of Canada, Ottawa, Ontario). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Mean free paths of singly charged relativistic secondary particles from ^{16}O interactions in emulsions have been measured. The results based on 1087 observed interactions indicate the presence of an anomalous component with a mean free path of about 5 cm, among the particles emitted in the angular interval corresponding to P tan θ between 200 and 400 MeV/c. 8 references.

29730 (LBL—16281, pp 65-68) **About a possible energy dependence of the anomalon effect at charge two.** Killinger, F.; GanBauge, E.; Bieschke, U.; Klein, N.; Kretschmer, R.; Laschek, A.; Weidner, W. (Philipps Univ., Marburg, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The reaction mean-free paths of projectile fragments of charge two seem to be shorter for a few centimeters after their emission than at larger distances from the primary star. This effect is enhanced with decreasing energy of the primary beam. If this can be shown to be true it possibly would explain why the anomalon effect which was established at charges Z ≧ 3 has not been found at Z = 2 in earlier work. Our target was an emulsion stack exposed to a ^{56}Fe beam of around 1.88 A GeV at the Berkeley Bevalac. 8 references.

29731 (LBL—16281, pp 69-72) **Search for topological correlations in the interactions of relativistic projectile fragments from relativistic heavy ion collisions.** Friedlander, E.M.; Heckman, H.H.; Karant, Y.J. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Following the observation of anomalously short mean free paths among projectile fragments from relativistic heavy ion collisions it was a natural next step to investigate what correlations, if any, exist between the characteristics of the events in which "anomalons" are produced, of those which they induce, as well as with their interaction mean free path. We report here the preliminary results of a search from correlations between the properties of production and interaction stars of He-secondaries from the extra-nuclear cascade induced by a beam of 1.88 A GeV Fe. The aim of this investigation, performed to date on a limited subsample of events from stack ^{3}Fe, was to identify parameters most sensitive to correlation studies, to be pursued with larger statistics on the whole available material.

29732 (LBL—16281, pp 73-76) **Particle-gamma coincidence measurements in ^{12}C + ^{12}C and ^{12}C + Pb collisions at 2.1 GeV/A incident energy, first results - γ-ray spectrum.** Roche, G.; Carroll, J.; Chang, C.C.; Hallman, T.; Kirk, P.N.; Koontz, R.; Krebs, G.; Madansky, L.; Mulera, T.; Pugh, H. (Universite de Clermont-Ferrand, France; Univ. of California, Los Angeles; Univ. of Maryland, College Park; Johns Hopkins Univ., Baltimore, MD; Louisiana State Univ., Baton Rouge). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

High-energy γ-rays are mainly produced through π^0 decay in relativistic heavy ion collisions at incident energies in the range 1-2 GeV/A. Other possible weak contributions are: nucleus-nucleus bremsstrahlung, eta-meson production, and Δ(1232) decay. Up to now, only a few experimental studies have been done on this subject. More recently, γ-ray measurements have been performed to study projectile fragments having an anomalously short interaction length, i.e., the so-called anomalons. Liss, et al. have searched for single delayed gammas as an eventual decay process. Their negative result does not completely rule out a possible electromagnetic decay of an anomalous state, because their measurement was done at 940 MeV/A, an energy at which it has been suggested that the effect could have disappeared. We have undertaken a different approach to the study of anomalous fragments. First, the study is done in the target fragmentation region. Second, we look for singly charged anomalous fragments through particle-gamma coincidence measurements. Our experimental method consists in looking for any sharp line or bump in γ-ray spectra in coincidence with particles and, ultimately, looking for any signal in the particle-gamma invariant mass distribution. We present here the experimental setup and preliminary results on the measured gamma-ray spectrum.

29733 (LBL—16281, pp 77-80) **Studies of anomalous projectile fragments with lead-glass, plastic track detectors, and Cerenkov detectors.** Price, P.B. (Univ. of California, Berkeley). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Status of the following studies is briefly described: search for delayed gamma decays of anomalous nuclear states, search for non-integrally charged projectile fragments in relativistic nucleus-nucleus collisions, study of anomalous fragments of 1.85A GeV ^{40}Ar reactions in CR-39 detectors, measurements of charge-changing interaction mean free paths of stable nuclei with plastic track detectors, comparison of anomalous mean free paths in compacted and dilute CR-39 stacks, and development of a segmented Cherenkov detector for study of the anomalon phenomenon. 29734 (LBL—16281, pp 237-239) **Coincidence experiments between pions (π/sup +-/) and forward charged particles from intermediate energy heavy ion collisions.** Julien, J.; Bolore, M.; Charlot, X.; Hisleur, J-M.; Legrain, R.; Pappalardo, G.S.; Poitou, J.; Johansson, T.; Guet, C.; Maurel, M. . (Centre d'Etudes Nucleaires Saclay, France; The Gustaf. Werner Inst., Uppsala, Sweden; Centre d'Etudes Nucleaires, Grenoble, France; INFN and Univ. Catania, Italy). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Pions being one of the most commonly produced particles in heavy ion collisons, one ought to have a very clear understanding of the associated pion production mechanism. Data obtained from subthreshold pion production inclusive measurements can be compared with the predictions of some of the conventional models. Nevertheless they are not sufficient to discriminate among these different models. For that, a necessary step is the realization of exclusive measurements. This paper describes an attempt of coincidence experiment between charged pions and forward emitted charged particles. A few results from a preliminary analysis of the data are presented. The experiment was carried out with the ^{12}C beam (85 MeV/A) of the CERN Synchrocyclotron using a ^{12}C target.

29735 (LBL—16281, pp 259-262) **Production of light fragments with high P/sub T/ at cm 90 degrees in 800 MeV/nucleon ^{12}C + ^{12}C collisions.** Bai, X.; Hamagaki, H.; Hashimoto, O.; Kadota, S.; Kimura, K.; Miake, Y.; Nagamiya, S.; Omata, K.; Shida, Y.; Tanihata, I. (Inst. of Atomic Energy, Beijing, China; Kyushu Univ., Fukuoka, Japan; Univ. of Tokyo, Hongo, Japan). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The experiment was designed to measure inclusive spectra of protons and light fragments emitted to CM 90 degrees with extreme high energy (E/sub K//sup CM/ > 700 MeV or P/sub Lab/ = 2 ~ 3 GeV/c) as well as correlations between particles emitted +- 90 degrees in the CM frame. We studied the 800 MeV/nucleon ^{12}C + ^{12}C reaction using a newly completed HISS (Heavy Ion Spectrometer System) facility at the BEVALAC. Preliminary data are presented. (WHK)

29736 (LBL—16281, pp 357-360) **Complex WKB solutions for ^{12}C+^{12}C scattering.** Townsend, L.W.; Bidasaria, H.B.; Wilson, J.W. (NASA Langley Research Center, Hampton, VA; Old Dominion Univ., Norfolk, VA). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

WKB solutions for carbon-carbon scattering from 200 to 360 MeV are obtained using a double-folding optical potential with no arbitrarily adjustable parameters. Significant improvements over previous results are obtained when values for the energy-dependent nucleon-nucleon scattering slope parameter are limited to those appropriate to diffractive scattering. 12 references.

29737 **Angular distribution for $^{15}N(\pi^+,\pi^0)^{15}O$(g.s.) at T/sub π/ = 48 MeV p.** Cooper, M.D.; Baer, H.W.; Bolton, R.; Bowman, J.D.; Cverna, F.; King, N.S.P.; Leitch, M.; Alster, J.; Doron, A.; Erell, A. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **52**: No. 13, 1100-1103(26 Mar 1984).

Pion single charge exchange to the isobaric analog state of ^{15}N was measured at T/sub π/ = 48 MeV over the angular range 0—150°. The angle-integrated cross section at 48 MeV is 0.43 +- 0.07 mb. The most prominent feature in the measured angular distribution is a deep minimum near 0°. The data are compared with optical-model calculations and the effects of various second-order terms in the potential are investigated.

29738 **Charge-changing reactions of secondary fragments produced in high-energy heavy-ion collisions.** Symons, T.J.M.; Baumgartner, M.; Dufour, J.P.; Girard, J.; Greiner, D.E.; Lindstrom, P.J.; Olson, D.L.; Crawford, H.J. (Nuclear Science Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Physical Review Letters;* **52**: No. 12, 982-985(19 Mar 1984). Contract AC03-76SF00098.

Charge-changing cross sections have been measured for secondary fragments produced by the interactions of 1.88A-GeV ^{56}Fe and 1.82A-GeV ^{40}Ar nuclei in Lucite. The cross sections are found to vary by less than 1.5% between 6 and 120 mm from the primary interaction point and are consistent with values expected from the normal reaction cross sections of primary beams. No correlation between secondary and tertiary path lengths has been observed. The present results do not provide supporting evidence for the existence of anomalons.

29739 **(INIS-mf—8372) Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis.** Hoyler, F. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 14 Jul 1982. 158p. (In German). NTIS (US Sales Only), PC A08/MF A01. Order Number DE84780175.

In the present thesis the (p,α) reaction on the 2s-1d-shell nuclei ^{23}Na, ^{24}Mg, ^{26}Mg, ^{27}Al, ^{35}Cl, ^{37}Cl, and ^{39}K was measured. The experiments were performed at the isochronous cyclotron JULIC of the Institute for Nuclear Physics of the Nuclear Research Facility Juelich and at the Emperor Van-de-Graaff accelerator of the Max Planck Institute for Nuclear Physics Heidelberg. Angular distributions for transitions to several residual nucleus states were evaluated in the energy range between 18 and 45 MeV incident proton energy. By the application of magnetic spectrometers as detection device an energy resolution between 25 and 45 keV could be reached.

29740 **(INIS-mf—8375) Precision measurement of the asymmetry coefficient in the β-γ-angular correlation in ^{24}Na.** Steuer, D. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet 1 - Mathematik und Physik). 20 Jul 1982. 70p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780177.

In the present thesis the asymmetry coefficient of the β-γ angular correlation function in the β^- decay of ^{24}Na to the second excited state of ^{24}Mg was measured in dependence of the energy of the detected electrons. The nucleus ^{24}Na was produced via the reaction ^{23}Na (d,p) ^{24}Na at the Erlangen tandem accelerator. Because of the half-life of the sample of 15.02 hours it was possible to perform the measurements thereafter in the laboratory. For the detection of the β-γ coincidence events a symmetric arrangement of two surface barrier detectors for the electron detection and two NaI detectors for the detection of the γ quanta was applied. With this arrangement it was possible to take up simultaneously two coincident counting rates for the angles theta = 90° and theta = 180° between electron and γ quant. The data acquisition was performed three-dimensionally. In the data evaluation especially the correction of the results to randomly coincidents events as well as really coincident events from the cascade $4^+ \to 2^+ \to 0^+$ in ^{24}Mg was regarded. The electron spectrum was devided into three energy ranges, and for each of these ranges the asymmetry coefficient of the angular correlation was determined separately. A comparison of these experimentally determined values with theoretical predictions shows that the experiment cannot by described by the hitherto present shell model calculations.

29741 (LBL—16281, pp 321-324) **Two-pion correlations for 1.2 GeV/nucleon Ar on KCl.** Beavis, D.; Chu, S.Y.; Fung, S.Y.; Gorn, W.; Huie, A.; Keane, D.; Lu, J.J.; Poe, R.T.; VanDalen, G.; Vient, M. From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The technique of pion interferometry is used to study the pion source for central collisions of 1.2 GeV/nucleon Ar on KCl. The data are described by a Gaussian source of radius 3.8 +- .5 fm, a lifetime of (18 +- 6) x 10^{-24} sec and a degree of coherence of .74 +- .17. 7 references.

29742 (LBL—16281, pp 333-336) **Pion spectra in the reaction Ar + KCl at 1.8 GeV/nucleon.** Brockmann, R.; Harris, J.W.; Maier, M.; Sandoval, A.; Stock, R; Stroebele, H.; Wolf, K.L.; Pugh, H.G.; Schroeder, L.S.; Renfordt, R.E. (Gesellschaft fuer Schwerionenforschung, Darmstadt, W. Germany; Lawrence Berkeley Lab., CA; Univ. Heidelberg, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Pion production in the symmetric system Ar + KCl was studied in the energy range 0.4-1.8 GeV/nucleon using the Streamer Chamber Facility at the Bevelac. The main purpose of this experiment was to measure a complete set of pion spectra, in order to test existing and future theoretical models describing the pion production and absorption in nucleus-nucleus collisions at higher nuclear densities. Up to now there exists no theoretical or phenomenological approach that reproduces all the features of the pion production mechanism, though specific aspects are well reproduced by several models. We report some observations that were made in central collisions at an incoming energy of 1.8 GeV/nucleon, which to our knowledge are not predicted by any of the existing theoretical or phenomenological approaches.

29743 (LBL—16281, pp 345-348) **Inclusive K^+-production in the model of transport theory for high-energy nucleus-nucleus collisions.** Zwermann, W.; Schuermann, B.; Dietrich, K.; Martschew, E. (Technischen Univ. Munchen, Garching, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The inclusive differential cross section for K^+-meson production in the reaction Ne + NaF at 2.1 GeV/N is calculated within an independent multiple collision approach, neglecting the possible influence of the rescattering of the produced kaons by surroundinng particles. We use the near-analytical, parameter-free model of transport theory with slight modifications, to determine the momentum distributions of the colliding particles after each number of collisions, taking account of pion production via the delta resonance.

29744 **Low multipolarity magnetic transitions in ^{32}S excited by electron scattering.** Burt, P.E.; Fagg, L.W.; Crannell, H.; Sober, D.I.; Stapor, W.; O'Brien, J.T.; Lightbody, J.W.; Maruyama, X.K.; Lindgren, R.A.; Sargent, C.P. (Catholic University of America, Washington, DC 20064). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 713-721(Mar 1984).

Electron scattering cross section measurements on ^{32}S have been made at incident electron energies between 34 and 74 MeV and at scattering angles of 162.4° and 180°. Form factors were deduced for transitions to states at 8.11, 9.68, 10.05, 10.78, 11.12, and 11.63 MeV. Additional peaks at 7.12, 12.02, and 13.36 MeV were observed in some spectra. Comparisons of cross sections at different angles show that the above six transitions are transverse. Comparison of the experimental form factors with those calculated using an oscillator shell model indicate that the 8.11, 9.68, 11.12, and 11.63 MeV transitions are M1. Transition probabilities B(M1)up-arrow = 1.14 +- 0.18, 0.69 +- 0.20, 2.40 +- 0.22, and 1.26 +- 0.20 μ_0^2, respectively, were determined for these four transitions. The M1 form factors and transition probabilities are also compared with other theoretical shell model calculations. The transition at 10.78 MeV is probably M2, or a mixture of M2 and transverse E2 transitions to unresolved states at about that energy.

29745 **Pion-induced monopole transitions.** Sparrow, D.A.; Gerace, W.J. (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 949-955(Mar 1984).

The importance of imposing the orthogonality condition between the initial and final state wave functions for a correct description of the direct contribution to the monopole cross section is demonstrated in the context of a study of $^{28}Si(\pi,\pi')$. Two step effects, previously found important for the ^{12}C monopole excitation, are less important in this reaction. Very general estimates of two-step contributions are derived. These indicate that multistep effects will be small in medium energy monopole excitations away from forward angles.

29746 (CONF-8403101—7) **Projectile fission in ^{58}Ni-induced reactions at 15.3 MeV/u.** Awes, T.C.; Ferguson, R.L.; Novotny, R.; Obenshain, F.E.; Plasil, F.; Rauch, V.; Sann, H.; Young, G.R. (Oak Ridge National Lab., TN (USA)). 9 Mar 1984. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011651.

From 3. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (5 Mar 1984).

The present study was intended as a search for sequential fission of projectilelike fragments for reactions induced by intermediate-mass heavy ions. The objective was to determine the fission probability as a function of excitation energy or energy loss in the first step of the reaction. The inclusive charge distributions measured with the large-area ionization chamber for reactions of ^{58}Ni + ^{58}Ni at 15.3 MeV/u were found to be dominated by products with $Z < 28$. Very little yield was observed for nuclei with charges greater than that of the projectile. It has been shown that most of the shift toward lighter products is consistent with the effects of equilibrium evaporation. At the largest calculated energy losses, the inclusive charge distributions were found to be slightly asymmetric due to an increasing component of fragments with half or less of the projectile charge. These light fragments were observed to have much broader angular distributions than the corresponding heavier fragments of the same energy loss. These observations from the inclusive measurements already suggest the occurrence of sequential fission of the projectilelike fragment. More conclusive evidence is obtained from coincidence measurements. Results are presented. (WHK)

29753 **(KFK—3555) Local density approximation in effective density-dependent αN-interactions.** Gils, H.J. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Nov 1983. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751305.

Different forms of a local density approximation (LDA) in effective density-dependent αN-interactions are compared in single-folding optical model analyses of elastic α particle scattering by sup(40,42,44,48)Ca at Esub(α)=104 MeV and by ^{40}Ca at Esub(α) = 140 MeV. It is shown that the form of the LDA considerably influences the results on folded optical potentials. A variable form of the LDA is suggested and discussed which includes previous forms as limiting cases. The new form leads to better fits to the data and to full consistency with the best available "model-independent" optical potentials.

29754 (LBL—16281, pp 309-311) **Azimuthal angular correlations between heavy projectile fragments and light particles in the reaction ^{18}O + Ni at 84 MeV/u.** Mueller, W.F.J.; Gobbi, A.; Hildenbrand, K.D.; Olmi, A.; Sann, H.; Stelzer, H.; Bock, I.; Lynen, U.; Pelte, D.; Winkler, U. (GSI, Darmstadt, W. Germany; MPI Heidelberg, W. Germany; Universitaet Heidelberg, W. Germany; Universitaet Muenster, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

An intermediate energies between 30-100 MeV/u the formation of a hot spot has been predicted, a reaction mechanism halfway between deep-inelastic scattering and participant-spectator behavior. As a localized excitation the hot spot may decay by particle evaporation as well as by heat conduction to the interior of the nuclear residues. In inclusive measurements in addition to evaporation from target and projectile a source at mid-rapidity has been observed which may result either from hot spot evaporation or from quasi-free nucleon-nucleon scattering. To investigate whether the mid-rapidity source in peripheral reactions is localized at the nuclear surface a coincidence experiment has been done at the 84 MeV/u ^{18}O beam of the CERN-SC. The set-up was used to study the correlation between projectile fragments and light charged particles. Results are reported.

29755 (LBL—16281, pp 325-328) **Two particle correlations observed with the plastic ball detector.** Wieman, H.; Gutbrod, H.H.; Gustafsson, H.A.; Kolb, B.; Loehner, H.; Ludewigt, B.; Poskanzer, A.M.; Renner, T.; Riedesel, H.; Ritter, H.G. (Gesellschaft fuer Schwerionenforschung, Darmstadt, W. Germany; Lawrence Berkeley Lab., CA). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Three different categories of two-particle correlations are being investigated in the analysis of the Plastic Ball data. The first category is source size determination using Hanbury-Brown, Twiss type interferometry. Two-pion correlations have been measured for this purpose with a streamer chamber and with a magnetic spectrometer. Source size measurements have also been made with proton-proton correlations following the calculations of Koonin, which include Coulomb and nuclear forces in addition to strictly interference effects. In this category of two-particle correlations the relative velocities are quite low. For protons the kinetic energy in the center of mass of the pair is on the order of 0.5 MeV. The second category of two-particle correlations deals with low-energy nuclear cluster formation, the kinetic energy in the pair center of mass being in the region 1 MeV to 10 MeV. Here one observes nuclear composites - the formation and decay of particle unstable isotopes and levels such as ^{5}Li. The third category addresses higher energies, 100 MeV or more in the center of mass of the pair. In this energy region the possibility exists for seeing baryon resonances. For example, delta decay might be observed via π^+-p correlations or dibaryon resonanced by π^+-d correlations. Preliminary results obtained in the first two categories are reported.

29756 **Core-excitation effects in pion double charge exchange.** Seth, K.K.; Kaletka, M.; Iversen, S.; Saha, A.; Barlow, D.; Smith, D.; Liu, L.C. (Northwestern University, Evanston, Illinois 60201). *Physical Review Letters;* **52**: No. 11, 894-897(12 Mar 1984).

Differential cross sections for the pion double-charge-exchange reaction ^{42}Ca(π^+, π^-)^{42}Ti(g.s.) have been mesured at θ/sub lab/ = 5° at several energies. For T(π^+)<200 MeV, σ(5°) are found to be more than an order of magnitude larger than those predicted by conventional double-charge-exchange calculations. It is shown that the observed enhancements can be explained in terms of coherent contributions due to terms proportional to rho^2(r) in the pion-nucleus potential whose importance is dramatically enhanced in presence of large core-excitation components in ^{42}Ca(g.s.).

29757 **(INIS-mf—8373) Particle multiplets and collective excitations in the odd-odd nucleus ^{74}Br.** Neumann, W. (Koeln Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 12 Feb 1983. 103p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780178.

The odd-odd nucleus ^{74}Br was gamma-spectroscopically studied via the reaction ^{58}Ni(^{19}F,2pnγ)^{74}Br. Single γ-spectra, γ-excitation functions, γ-γ coincidences, γ-angular distributions, and mean life-times were measured by the recoil-distance method in coincidence with the neutron evaporated from the compound nucleus. The term scheme was extended by 14 new levels and 7 life-time assignments. For the measurement of parity changes a magnetic spectrometer of the 'Mini-Orange' type was constructed which works equally in coincidence with neutrons. By it in ^{74}Br 8 conversion coefficients were measured. Calculations in a rotor-plus-2-quasiparticle model and calculations of the multiplet splitting of one-particle states of f, p, and g shells of this mass region permit a compared to the transition probabilities, sufficient interpretation of the most states ^{74}Br in that way, that these different structures could be identified just as mixtures of collective and one-particle excitations.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Nuclear emulsion studies suggest that fragmentation products from relativistic heavy ion collisions have anomalously large reaction cross sections and that these anomalons disappear over the first few centimeters of their track in emulsions. If these "anomalons" exist, their disappearance could be due to either depletion by a very large reaction cross section, or decay with a mean lifetime of about 10^{-11} seconds and with only somewhat enhanced cross section. The counter experiment described here was designed to test the decay model proposed by Barber et al. that explains the emulsion data by assuming that all produced fragments are anomalons with 1.6 times the cross section of normal fragments and that the anomalons have a mean lifetime (tau) of about 10^{-11} s corresponding to a mean decay length ($c\beta\gamma$tau) of 9 mm. If the disappearance in emulsions is due to decay, one should observe a decreased number of secondary interactions in a low-density target, compared to the number observed in a solid target. We have conducted an experiment based on this density effect. The experiment was performed by bombarding alternatively a solid (20 mm thick) and a dilute (ten 2-mm slabs each separated by 20 mm) Cu target with a beam of 1.7 GeV/u ^{56}Fe ions at the Berkeley Bevalac. The produced projectile fragments were detected, within a cone of +- 1° opening angle 5.5 m downstream, in ΔE plastic scintillators having successive thicknesses of 1, 6, and 38 mm.

29762 (LBL—16281, pp 63-64) **Search for anomalon decay by radiochemical methods.** Dersch, G.; Aleklett, K.; Beckmann, R.; Brandt, R.; Friedlander, E.M.; Loveland, W.; Lund, T.; McGaughey, P.; Porile, N.; Seaborg, G.T. (Philipps Univ., Marburg, W. Germany; Studsvik Science Research Lab., Nykoeping, Sweden; Lawrence Berkeley Lab., CA; Oregon State Univ., Corvallis; Purdue Univ., W. Lafayette, IN). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We present preliminary data on the tests of a radiochemical approach to the investigation of the stability of projectile fragments from relativistic heavy ion collisions. The recent emulsion evidence for anomalously short mean free paths of a least part of such projectile fragments ("anomalons") can be interpreted (most simplistically) by two extreme hypotheses, viz: (a) Anomalons are essentially stable over the distances accessible to the emulsion experiments (~ 10 cm) and, (b) Most anomalons return to the nuclear ground state ("normal" cross-section) with a mean life-time comparable to the time necessary for traversal of such distances. Although the experiment described is sensitive, in principle, to the presence of stable anomalons, too, its main aim is to test hypothesis (b), above.

29763 (CONF-8403117—1) **Model for fission-product calculations.** Smith, A.B. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010525.

From Meeting of the Nuclear Energy Agency Nuclear Data Commission; Jaeri, Japan (12 Mar 1984).

Portions are illegible in microfiche products.

Many fission-product cross sections remain unmeasurable thus considerable reliance must be placed upon calculational interpolation and extrapolation from the few available measured cross sections. The vehicle, particularly for the lighter fission products, is the conventional optical-statistical model. The applied goals generally are: capture cross sections to 7 to 10% accuracies and inelastic-scattering cross sections to 25 to 50%. Comparisons of recent evaluations and experimental results indicate that these goals too often are far from being met, particularly in the area of inelastic scattering, and some of the evaluated fission-product cross sections are simply physically unreasonable. It is difficult to avoid the conclusion that the models employed in many of the evaluations are inappropriate and/or inappropriately used. In order to alleviate the above unfortunate situations, a regional optical-statistical (OM) model was sought with the goal of quantitative prediction of the cross sections of the lighter-mass (Z = 30-51) fission products. The first step toward that goal was the establishment of a reliable experimental data base consisting of energy-averaged neutron total and differential-scattering cross sections. The second step was the deduction of a regional model from the experimental data. It was assumed that a spherical OM is appropriate: a reasonable and practical assumption. The resulting OM then was verified against the measured data base. Finally, the physical character of the regional model is examined.

29764 (INIS-mf—8369) **Studies on the electron capture decay of ^{146}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies.** Kantus, R. (Goettingen Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 6 Nov 1981. 55p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780180.

For the study of the EC decay energies of isotopes near Z=64 a CAMAC measuring system was established, and programs for the acquisition of coincidence and single data as well for the analysis of the obtained data were developed. By the method of the measuring of relative capture probabilities a lower limit for the decay energy of ^{146}Gd of Qsub(EC)(^{146}Gd)>950 keV was determined. By determination of the β^+/EC branching ratio in the decay of ^{150}Dy for the decay energy a lower limit of 1826 keV was found by which for the decay energy of ^{146}Gd regarding the α decay energy of ^{150}Dy a value of 950 keV < Qsub(EC)(^{146}Gd) < 1064 keV results. Furthermore the level scheme of the ^{146}Gd decay was studied, and 4 new levels at 114, 421, 498, and 690 keV were determined whereby the hitherto assumed levels at 115, 742, and 806 keV could be excluded. The EC decay energy of ^{147}Gd and ^{147}Eu was also determined by the method of the β^+/EC determination and the values Qsub(EC)(^{147}Gd)=2088+-45 keV and Qsub(EC)(^{147}Eu)=1669+- 30 keV. The level scheme of the ^{147}Eu decay was reexamined. The levels at 121, 197, 798, 1064, 1063, 1077, 1318, 1454, 1471, and 1549 keV could be confirmed whereas the level at 1646 keV could be excluded. Transitions from further levels indicated in literature couldn't be observed in the present measurement, but cannot be excluded within the error limits.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Collective effects in the pion production from collisions of 60-84 MeV/u ^{12}C and ^{18}O projectiles as well as ^{40}Ar ions of 44 MeV/u with targets from A = 12 to A = 232 seem to be established. The picture of a coherent bremsstrahlung like pion emission caused by a collective deceleration of the projectile (resp. an acceleration of the target) describes the data reasonably well. It is tested by also observing electromagnetic bremsstrahlung, i.e. high energy gamma rays. Using the slowing down parameters from the analysis of the π^0 spectra one calculates electromagnetic bremsstrahlung with an intensity of about the same order of magnitude as that part of the observed gamma spectra which is not originating from π^0 decay. This consistency indicates the possibility to perform a detailed study of the internuclear collision dynamics and especially the slowing down process by observing bremsstrahlung of the strong and electromagnetic interactions simultaneously. From the analysis of the pion production data available so far it appears that at energies around 60 MeV/u violent nucleus nucleus collisions are occurring in which a big portion of the kinetic energy is taken out of the relative motion through a fast slowing down process taking place within about 1 fm. 15 references.

29772 (LBL—16281, pp 255-258) **Inclusive measurements of pions and light fragments in 800 MeV/nucleon ^{139}/sub 57/La + ^{139}/sub 57/La collisions.** Bai, X.; Hamagaki, H.; Hashimoto, O.; Kimura, K.; Kobayashi, T.; Miake, Y.; Nagamiya, S.; Shapiro, G.; Shida, Y.; Tanihata, I. (Univ. of Tokyo, Japan; Univ. of Calif., Berkeley; Inst. of Atomic Energy, Beijing, China; Kyushu Univ., Fukuoka, Japan). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The 800 Mev/nucleon La beam was accelerated at the upgraded BEVALAC. The beam intensity on the target was as high as 10^6 particles/spill. The magnetic spectrometer was used to measure negative pions in the momentum range above 150 MeV/c and light fragments between 400 MeV/c and 2000 MeV/c at laboratory angles of 15, 20, 40, 60, 80, and 90 degrees. Preliminary data for momentum distributions of protons and pions at various laboratory angles are shown. Proton and pion energy distributions at CM 90 degrees for the La + La reaction are plotted together with the C + C, Ne + NaF and Ar + KCl reactions. (WHK)

29773 (LBL—16281, pp 305-308) **Angular correlations between target and projectile fragments emitted from ^{238}U + Ag(Br) collisions at 0.85 A GeV.** Heckman, H.H.; Friedlander, E.M.; Karant, Y.J. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Our examination of inelastic nuclear interactions of ~ 1A GeV ^{238}U in research emulsions revealed a large range of target/projectile multiplicities, from simple binary fission to complete disintegration of both the uranium projectile and target nucleus into nucleons and light nuclear fragments. A particular class of U-reactions that we have begun to study are those that exhibit the classical target/projectile fragment topologies, selected by the criteria that at least 10 target- and 10 projectile-related fragments are produced in the reaction. Such reactions, when observed in emulsion, are identified with collisions of the incident uranium ions with the heavy component, Ag(Br), of the emulsion. Because of the high multiplicities of both target and projectile fragments, statistically meaningful measurements on the angular correlations between the target and projectile fragments becomes possible on an event-by-event basis. The status of the measurements is described.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

One of the questions to be answered by studying collisions of nuclei at relativistic energies is whether phase transitions can occur in nuclear matter. Several models have suggested changes in entropy as a signature of such a phase transition. More recently a suggestion has been made that one measure of entropy might be the comparison of the deuteron yield to the proton yield. A further refinement has been made that proposes measuring the number of real and virtual deuterons to determine entropy. The measurements of these quantities up until this time has been done with single particle inclusive measurements. As has been shown recently with results from the Plastic Ball such measurements average over impact parameters. Consequently, information about quantities that have a charge particle multiplicity or impact parameter dependence is lost. The results to be reported on in this work indicate just such a dependence of d-like/p-like on charge particle multiplicity.

29775 (LBL—16281, pp 363-372) **Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV.** Derado, I. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen, Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Results for correlation between [p/sub perpendicular/] and multiplicity in the central rapidity region are presented. No correlation is observed. In the central collisions, i.e., by higher multiplicity, one could expect higher energy density and/or temperature resulting in an increase of [p/sub perpendicular/]. Such an increase has been observed in the anti pp collider experiment. However, our energy is much lower than that of a collider. We have obtained values for the size and lifetime of the pion producing region for both hydrogen and xenon targets. For both targets the values are similar, with radius about 1.5 fermis. This result is consistent with our previous observation that the proton interacts inside the nucleus in the manner, predicted by the additive quark model. This analysis shows no indication of a deconfinement phase transition in nuclear matter.

29776 (LBL—16281, pp 385-388) **Particle densities in ultrarelativistic heavy ion reactions extrapolated from proton-nucleus collisions.** Otterlund, I.; Garpman, S.; Lund, I. (Univ. of Lund, Sweden). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Rapidity density distributions in central ultrarelativistic heavy ion reactions are estimated from high energy proton-nucleus collisions and compared with some cosmic ray events. Deviations from a simple scaling of pA reactions are observed. 8 references.

29777 (LBL—16281, pp 389-392) **Analysis of the high multiplicity events in ultra-relativistic heavy ion collisions.** Sumiyoshi, H. (Univ. of Tokyo, Japan). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

From the view point that a high energy nucleus-nucleus interaction is composed of the multiple nucleon-nucleon collisions, we analyze the multiplicities of the ultra-relativistic heavy ion collisions. Most of the experimental data are well settled within our framework. It is concluded that the multiplicity is insensitive to the quark-gluon plasma (QGP) formation or QGP has not yet been created within the observed events. 17 references.

29778 (LBL—16281, pp 393-403) **Lepton scattering from nuclear targets.** Bodek, A. (Univ. of Rochester, NY). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Experimental results on deep inelastic lepton scattering from nuclear targets are discussed with emphasis on electron scattering experiments. Also discussed are experiments that have recently been completed and experiments that are about to begin data taking in the near future. A short summary of current theoretical ideas on quark distributions in nuclei is also presented. An analysis of electron scattering and neutrino scattering data from hydrogen and deuterium indicates that nuclear effects in the deuteron are small. 39 references.

(Univ. of Tokyo, Japan; Kobe Univ., Japan; Osaka Univ. Japan; Waseda Univ., Tokyo, Japan; Louisiana State Univ., Baton Rouge). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Cosmic ray nucleus-nucleus interactions have been analyzed at energies exceeding 1 TeV/nucleon. A high P/sub T/ tail ([P/sub T/] $\geq$ 1 - 1.2 GeV/c) has been observed in C + C interactions, and three anomalous central collision events (Ar + Pb, Ca + C, and Si + AgBr) each imply energy densities $\geq$4.0 - 4.6 GeV/fm^3, for an expansion time of 1 fm/c, which exceed the predicted critical value for quark-gluon deconfinement. The average P/sub T/ for these anomalous events is significantly above normal (400 MeV/c).

29780 (LBL—16281, pp 579-582) **Evidence for the non-existence of anomalous projectile fragments with Z* = 1.33, 1.67, 2.33 and 2.67.** Bloomer, M.A.; Friedlander, E.M.; Heckman, H.H.; Karant, Y.J. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Recent speculation on the cause of the anomalously short reaction mean free paths of projectile fragmentation products (PF's) produced from relativistic heavy-ion (RHI) collisions with emulsion nuclei has led to the suggestion that "anomalons" (i.e., the fraction of PF's exhibiting this anomaly) are nuclei with bound third-integral charges. In an earlier paper we described in detail how to measure the nuclear charge of $1 \leq Z \leq 3$ PF's of RHI collisions in nuclear emulsion: specifically, measurements based on the lacunarity, i.e., fractional transparency, of the linear track structure of such ionization tracks will easily yield a precision of $\sigma = 0.05$ charge units for $Z = 1$ and $Z = 2$, and about $\sigma = 0.07$ charge units for $Z = 3$. We now present the results of 1179 measurements carried out by 3 observers on $1 \leq Z \leq 3$ PF's produced by the extra-nuclear cascade of interactions initiated by a 1.88 A GeV ^{56}Fe beam incident upon a stack of Ilford G-5 emulsion pellicles.

29781 (LBL—16281, pp 607-626) **Are anomalons still provocative: a summary of the present experimental situation.** Otterlund, I. (Univ. of Lund, Sweden). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A number of experiments have shown that enlarged cross sections exist for projectile fragments which are emitted in relativistic heavy ion collisions. The present status of these investigations is reviewed and new detector techniques for anomalon search are discussed. Most experiments are compatible with an assumption that the anomalon effect is smaller than 3% and appears within distances shorter than about 2 cm from the parent reaction. 39 references.

29782 **Gamma-ray cascade population of the (19/2)$^-$ isomer in the decay of ^{133}Te/sup m/ to levels of ^{133}I.** Walters, W.B.; Henry, E.A.; Meyer, R.A. (Department of Chemistry, University of Maryland, College Park, Maryland 20742). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 991-1004(Mar 1984). Contract W-7405-ENG-48.

We have studied the decay of 55.4-min ^{133}Te/sup m/ to the levels of ^{133}I. The population of 47 excited states in ^{133}I following the decay of ^{133}Te/sup m/ is proposed and evidence for ten additional states is discussed. The observed decay patterns are found to be strongly influenced by the levels populated in the β decay of the (11/2)$^-$ parent cascade through an intermediate energy three-particle (19/2)$^-$ isomer rather than simply decaying by E1 γ rays to the lower-lying positive parity levels. We discuss the role of these structurally controlled γ ray cascades on processes occurring in nuclides near closed shells.

29783 **(EFI—552(39)-82) Description of correlations between the multiplicities of πp mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon.** Gulkanyan, G.R.; Korchagin, S.A.; Rabinovich, I.M. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701681.

The correlations between the multiplicities of π^--mesons and nonrelativistic protons in collisions of light nuclei with a heavy target-nucleus are calculated in the model of independently interacting nucleons. The calculations results are compared with experimental data on the interactions of (p, d, He, C) with a tantalum (Ta) nucleus at 4.2 GeV/c momentum per nucleon, obtained at a 2m propane bubble chamber of JINR with an internal tantalum.

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29786 **γ-γ energy correlations and the moments of inertia in ^{176}W.** Lee, I.Y.; Baktash, C.; Saladin, J.X. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 837-842(Mar 1984).

The behavior of ^{176}W at high angular momentum was investigated through both spectroscopy of the discrete and correlation measurements of the continuum γ rays. The γ-γ coincidence data were taken with a detection system consisting of two Compton-suppressed Ge(Li) counters. First and second moments of inertia were derived from the data.

29787 **Angular-momentum-dependent fission barriers in the rare-earth region.** Plasil, F.; Awes, T.C.; Cheynis, B.; Drain, D.; Ferguson, R.L.; Obenshain, F.E.; Sierk, A.J.; Steadman, S.G.; Young, G.R. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 1145-1148(Mar 1984).

Fission and evaporation residue excitation functions of ^{153}Tb and ^{181}Re compound systems are investigated in the context of angular-momentum-dependent fission barrier calculations in which effects of the finite range of the nuclear force and of the diffuseness of the nuclear surface are included. Carbon- and neon-induced reactions are studied in both the ^{153}Tb and ^{181}Re cases. Reasonable agreement is found between experimental and calculated excitation functions without adjustments of the theoretical fission barriers.

29789 (INIS-mf—8374) **Studies on the alpha decay of polonium.** Steinmayer, T.W.R. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 22 Dec 1982. 74p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780174.

The theory on the alpha decay originating from Wildermuth is presented with some specifications justified by the following. For the description of the inert Pb core oscillator functions are applied which permit together with the Gauss functions serving as continuous base for the alpha particles an explicit antisymmetrization and analytic integration of all occurring matrix elements. This point of view led to the choice of the two-body forces with Gaussian-like radial dependence presented by Volkov; the Coulomb potential was microscopically correctly regarded. The analytical integrability of all matrix elements was required by inclusion of one-body excitations up to ca. 30 quanta and the therefore conditioned very large number of such element. For the motion of the alpha particle relatively to the lead from the Schroedinger equation a resonating-group equation is derived in integral form, and after incorporation of the correct boundary conditions the generated variational problem is solved, whereby line widths results which are by a factor 50 too small compared to the experiment. The above approach is improved by taking a Po compound state into account, whereby the nucleons above the Fermi edge of the lead are describe by two-by-two to the zero angular momentum coupled functions.

29790 (INIS-mf—8385) **Collective and one-body degrees of freedom in high spin states.** Lima, C.L. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 15 Jul 1982. 111p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780171.

In the first three chapters of the present thesis nuclei in the Pt-Hg region were studied by three different models, namely i) 2QP + rotor, ii) 2QP + IBA, iii) 2QP + coherent states (2QT + CS). As a general result it can be said that all three models were able to obtain good agreement with the experimental properties (energy spectra, transition probabilities, and g-factors) although the model 2QP + CS shows B(E2)-values for the transitions between states of the ground band ($I <= 8$), which are similar to a vibrator contrarily to the experimental results for this region. In the second part of this thesis the one-particle parameters of the Woods-Saxon potential were optimized in order to describe the high spin excitations of the spherical or oblately deformed nuclei in the immediate region of ^{140}Gd. The optimal parameter values, which had be obtained for the spin-orbit part of the potential, are almost the same for protons and neutrons.

29791 (LBL—16281, pp 301-304) **Asymmetric fission of relativistic gold nuclei.** Freier, P.S.; Waddington, C.J. (Univ. of Minnesota, Minneapolis). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Relativistic gold nuclei have been observed in nuclear emulsions. Among the nuclear interactions detected some 6.0% represent a fission of the projectile nucleus. One-third of these fission events have strongly asymmetric fission products while the other two-thirds are symmetric. This appears to be the first observation of a significant yield of asymmetric fission from nuclei in this mass range. 9 references.

29792 (LBL—16281, pp 317-320) **Neutron emission from collisions of 390 MeV/u neon ions on lead.** Madey, R.; Varga, J.C.; Anderson, B.D.; Baldwin, A.R.; Cecil, R.; Watson, J.W.; Westfall, G.D. (Kent State Univ., OH; Michigan State Univ., East Lansing). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We measured neutron time-of-flight spectra at eight angles (viz., 0°, 15°, 30°, 50°, 70°, 90°, 120°m and 160°) from collisions of neon ions with an energy of 390 MeV/u at the center of a (3.43 g/cm^2) Pb target. Flight paths ranged from 8 m at 0° to 3.5 m at 160°. The apparatus measured the time difference between the detection of a neon ion in a beam telescope (consisting of two 0.8 mm scintillators) and the detection of a neutron in one of the eight, mean-timed, neutron detectors. The neutron energy resolution varied from 4% at 100 MeV, to 8% at 400 MeV, to 15% at 800 MeV. Results are reported.

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Target fragment yields were measured for the interaction of 12.0 and 18.4 MeV/u ^{16}O and 45.8 and 83.8 MeV/u ^{12}C with ^{197}Au.

29794 (LBL—16281, pp 567-573) **Fractional charge search at the Bevalac.** Shaw, G.L. (Univ. of California, Irvine). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The glow model of broken QCD allows for free, low-mass, fractionally charged, glow-singlet, color 6, diquarks Q. Although these composite Q's may be difficult to produce at present e^+e^- and hadronic energies, the situation could be much more favorable in heavy-ion collisions. In contrast to other models, the glow model allows for parameters which could lead to the production of fractional charge at Bevalac energies. A two stage experiment is in progress: The first step consisted of an (initial) exposure of a heavy target configuration to a total of 3 x 10^{10} Fe ions of 1.9 GeV/nucleon kinetic energy. Fractional charge which escaped the target was stopped in five gallon tanks of CCl_4 and collected (and thus concentrated) on thin central wires. The target materials and collection wires were distributed to a number of laboratories conducting experiments designed to look for free fractional charge in bulk matter. The first results from the SFSU automated Millikan droplet experiment found less than one fractional charge produced per 10^4 Fe-Pb collisions (and with further assumptions, less than one for 2 x 10^6 collisions). 14 references.

29795 (LBL—16281, pp 589-591) **Search for unstable superdense nuclei at the Dubna synchrophasotron.** Kuznetsov, A.A. (Joint Inst. for Nuclear Research, Dubna, USSR). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Experimental results are briefly discussed on a search for superdense nuclei unstable to β-decay for a lifetime of $10^{-8} \leqq$ tau $\leqq 10^{-6}$ s and metastable superdense nuclei decaying with π^0-meson emission for a lifetime of 10^{-7}-10^{-1} s. These experiments have been recently carried out at the synchrophasotron on beams of carbon relativistic nuclei. The momenta of the beam of ^{12}C nuclei extracted from the synchrophasotron were 1.68 and 4.5 GeV/c per nucleon. (WHK)

29796 **Obtaining of the high energy-resolution spectra of heavy-ion on a QQDQ magnetic spectrometer.** Chenglie, J.; Christensen, P.R.; Hansen, O.; Pontoppidan, S.; Videbaek, F.; Bond, P.D.; Shuell, D.; Freiesleben, H.; Wenqing, S.; Busch, F. (Institute of Atomic Energy, Academia Sinica, P.O. Box 275, Beijing). *Zhonghua Heyixue Zazhi;* **5**: No. 1, 27-35(Feb 1983). (In Chinese).

A high energy-resolution experiment of heavy ion nuclear reaction of $^{86}Kr + ^{208}Pb$ is done with the QQDQ magnetic spectrometer on GSI-UNILAC. This is the first time to accomplish a rather detail analysis of the energy spectra of outgoing ions from such heavy colliding system. Even a rather careful tuning of the running of the spectrometer is done, the horizontal position of the ion trajectory on the focal plane still somewhat depends on the entrance angle and the vertical position, thus influences the energy resolution. A method is suggested to remedy this distortion, the result is promising.

29797 **(INIS-BR—104) Cluster approach to intranuclear cascade for relativistic heavy ion collisions.** Kodama, T.; Duarte, S.B.; Chung, K.C. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro); Nazareth, R.A.M.S. (Rio de Janeiro Univ. (Brazil). Inst. de Fisica). (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84780172.

A new approach to the intranuclear cascade model for relativistic heavy ion reaction is presented. The effect of nucleon concentration on the collision process is explicitly included. It is found that the contributions from the non-binary processes are far from being negligible. Such processes are shown to broaden the angular distribution of inclusive proton spectra for $^{20}Ne + ^{238}U$ head-on collisions.

From International conference on nuclear physics; Florence, Italy (29 Aug 1983).

The last theoretical developments concerning the fusion process are reviewed. They concern the appearance of new dissipative mechanisms: fast fission, when the fission barrier of the compound nucleus vanishes due to angular momentum, and quasifission which takes place for heavy systems. The conditions under which these processes, as well as fusion, occur are discussed in details using the fast fission and the extra push models.

29805 **(CEA-CONF—6972) Electron scattering and nuclear structure.** Frois, B. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Sep 1983. 13p. (CONF-830833—21). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84750627.

From International conference on nuclear physics; Florence, Italy (29 Aug 1983).

Portions are illegible in microfiche products.

Electron scattering is a remarkable source of quantitative and interpretable data on nuclear structure. The nuclear charge and magnetization densities can be determined in great detail, giving the spatial distribution of the nucleons in the innermost region of the

nucleus. A review of the recent results chosen for their illustrative value is given.

From INS symposium on high energy photonuclear reactions and related topics; Tokyo, Japan (29 Sep 1983).

Nuclear Physics has now evolved from the study of the many nucleon problem, to the study of the interplay of the degrees of freedom of such a complex system and the internal degrees of freedom of each of its hadronic constituents. Extensive studies of electronuclear reactions have all allowed us to disentangle the basic mechanisms of the interaction between two baryons in a nucleus. The pion exchange mechanisms, which dominates at large distance has been singled out. The NΔ interaction, which enter the description of the intermediate range part, has been studied. Evidences for effects due to the quark structure of the nucleon have been found. But more systematic studies are needed to study them in detail.

From Workshop on experimentation at HERA; Amsterdam, Netherlands (9 Jun 1983).

I shall discuss physics which cannot be studied with ep colliders although it may be relevant for the ep programme. Most of my talk is devoted to the striking difference between the structure functions of iron and deuterium recently reported by the European Muon Collaboration (EMC). I also describe briefly how the questions of shadowing and the evolution of leptoproduced jets in nuclei appear to a non-expert.

29808 **(INIS-mf—8348) Expansion of the fireball after a high energetic heavy ion reaction.** Aichelin, J. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1982. 82p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780173.

Employing the Wigner density formalism we present a model for the expansion of a fireball created in a relativistic heavy ion collision In a simplified model we first study how many collisions a nucleon suffers during the expansion. Knowing this we can determine the Wigner densities of the nucleons in the entrance channel of the elementary deuteron production. It turns out that, even if the nucleons in the entrance channel have a thermal distribution, the particles in the exit channel have not. The comparison with experiments shows that the energy distributions of pions, protons and deuterons can be described by the same temperature. The number of deuterons allows to determine the average density at the beginning of the expansion. Finally we compare these results with those of other models, especially of a chemical rate equation.

In Nuclear constants.

A comparison is made between the prompt fission energy, Esub(pr), calculated from the mass and binding energy spectrum and the Esub(pr) value obtained from the experimental data on the kinetic energy of fragments, the energy of prompt neutrons and prompt γ-quanta. Basing on the data on β-decay chains of fission fragments, the energies of neutrinos, γ-quanta and β-electrons are obtained, which permits to calculate the actual energy released during fission. The calculations are performed for thermal neutron-induced fission, fast-neutron induced fission and for fission after bombardment with 14 MeV neutrons. The available experimental data on the fission fragment kinetic energy, prompt γ-quanta energy and fission neutron energy are presented. The comparison of the Esub(pr) values obtained experimentally for the thermal-neutron-induced fission with the calculated Esub(pr) value shows that for ^{233}U, ^{239}Pu, ^{241}Pu the agreement is rather favourable. For ^{235}U the agreement is within the error limits. As to the Esub(pr) values for the fast-neutron-induced fission, the agreement between the calculated and experimental data for all nuclides is quite good.

29822 **(JINR—E-2-83-101) Coalescence model apd the Pauli quenching in high-energy heavy-ion collisions.** Gudima, K.K.; Ropke, G.; Schulz, H.; Toneev, V.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701691.

A composite particle production mechanism is discussed for high-energy heavy-ion collisions. It is shown that the effective account of the nuclear medium on the deuteron-like bound-state wave function by solving a Bethe-Goldstone type equation requires a smaller coalescence radius of the respective momentum space compared with that obtained by using a deuteron wave function of two isolated nucleons. Calculating the proton and deuteron spectra of relativistic heavy-ion reactions in the framework of the cascade model gives values of the coalescence of nucleons in accordance with these expectations.

29823 **(JINR—E-2-83-415) Quark-parton structure functions of nuclei.** Baldin, A.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701692.

The previously available and new experimental data are used to discuss the properties of the structure functions of nuclei as independent (irreducible to one-nucleon) objects of hadron physics. The basic data have been obtained by the Stavinsky group in experiments on limiting fragmentation of more than 20 nuclei from ^{7}Li to ^{238}U. The discovered properties of the quark-parton structure functions give evidence for the existence in nuclei of multiquark configurations which essentially differ from those present in both free nucleons and two-, three- and more nucleon systems. Experiments on deep inelastic scattering of leptons on nuclei performed by the CERN-Dubna NA-4 Collaboration, the European Muon Collaboration and at SLAC confirm the conclusions about the structure functions of nuclei drawn from nuclear limiting fragmentation studies.

29824 **(JINR—E-4-83-421) Interacting vector boson model of collective nuclear states. Tensorial structure of the Hamiltonian.** Georgieva, A.I.; Rachev, P.P.; Roussev, R.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701693.

The most general one- and two-body interaction is constructed by means of two interacting vector bosons. The group U(6) is the group of dynamical symmetry if the Hamiltonian conserves the number of bosons. All possible types of one- and two-boson interactions are expressed by irreducible tensor operators corresponding to the decomposition: U(6) is contained in U(3)+U(2) is contained in U(3)+(U(1)+U(1)) is contained in O(3). The necessary isoscalar factors are calculated. This representation of the Hamiltonian makes possible its diagonalization through a direct application of the Wigner-Eckart theorem.

29825 **(KFK—3556) Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering.** Friedman, E.; Gils, H.J.; Rebel, H. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Dec 1983. 60p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751304.

The elastic scattering of 104 MeV α particles by sup(40,42,43,44,48)Ca, ^{50}Ti, ^{51}V, ^{52}Cr has been analyzed by phenomenological and semimicroscopic optical potentials in order to get information on isotopic and isotonic differences of the α particle optical potentials and of nuclear matter densities. The phenomenological optical potentials based on a Fourier-Bessel description of the real part reveal different behaviour in size and shape for the isotonic chain as compared to the isotopic chain. Odd-even effects are also indicated to be different for isotones and isotopes. The semimicroscopic analyses use a single-folding model with a density-dependent effective αN-interaction including a realistic local density approximation. The calculated potentials are fully consistent with the phenomenological ones. Isopotic and isotonic differences of the nuclear matter densities obtained from the folding model in general show a similar behavior as the optical potential differences. The results on matter densities are compared to other investigations.

29826 (LBL—16281, pp 97-110) **Is the anomalon a dinotor.** Castillejo, L.; Goldhaber, A.S.; Jackson, A.D.; Johnson, M.B. (University College London, England; State Univ. of New York, Stony Brook; LAMPF, Los Alamos, NM). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A model is proposed to explain the anomalous fragments in high energy heavy ion collisions. It consists of a large toroidal bag containing a Fermi sea of quarks confined by the M.I.T. bag boundary condition. Its shape, stability and lifetime are discussed as are the effects of one gluon exchange in determining the internal quark wave functions.

29827 (LBL—16281, pp 111-147) **Spontaneously broken symmetries in nuclear physics.** Boguta, J. Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The purpose of this work is to explore the consequences of spontaneously broken symmetries in nuclear physics. This might seem an odd task to undertake in that spontaneously broken symmetries have played no substantial role in understanding nuclear structure. It becomes meaningful, though, in a field theoretic description of nuclear interactions. There are two types of spontaneously broken symmetries that are relevant in a relativistic field theory approach to nuclear structure and nuclear dynamics. The pion plays an important role in both. It can be viewed as the realization of chiral symmetry in the Goldstone mode. T.D. Lee and G.C. Wick showed a number of years ago that such realization of chiral symmetry implies the existence of a new solution to the field equations, leading to a new nuclear configuration. The other form of spontaneously broken symmetry that is relevant is gauge invariance. The consideration of spontaneously broken gauge field theory in the context of nuclear physics is a logical consequence of the relativistic field theory program, initiated by J.D. Walecka, to describe nuclear interactions. 18 references.

29828 (LBL—16281, pp 149-165) **Quasi-molecular structures in nuclear systems.** Tang, Y.C. (Univ. of Minnesota, Minneapolis). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Theoretical and/or experimental evidence is presented to show that there exist quasi-molecular structures in light, medium, and heavy systems. At relativistic energies, an impulse mechanism, which can effectively excite the quasi-molecular states, is described. Plausible arguments are given, which suggest that the observation of anomalons and the asymmetric fission in the Au-region may both be related to the existence of quasi-molecular structures in nuclei. 34 references.

29829 (LBL—16281, pp 167-168) **Anomalous nuclei and a nonstatic metastable σ-tau phase.** Palumbo, F. (Laboratori Nazionali di Frascati, Italy). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Recent experiments have confirmed previous observations of light anomalous nuclei. These nuclei are characterized by a lifetime of at least 10^{-11} s and by a cross-section which exceeds the geometrical bound by one order of magnitude. A cross-section exceeding the geometrical bound is something so extraordinary that it seems to us to be worthwhile considering any mechanism which could possibly explain it, even if an explicit calculation is not possible at present. We, therefore, make here some qualitative considerations relating such cross-sections to a possible metastable σ-tau phase (spin-up protons and spin-down neutrons displaced with respect to spin-down protons and spin-up neutrons).

29830 (LBL—16281, pp 169-172) **Pion condensates as anomalons.** Fowler, G.N.; Raha, S.; Weiner, R.M. (Univ. of Marburg, W. Germany; Univ. of Exeter, England). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We propose a solution to the anomalon problem in terms of another phenomenon which has been studied intensively and for which there exists an appreciable consensus that it should occur in nuclear matter under appropriate conditions; we refer to pion condensates. The pion field outside a nucleus in which a condensate exists can have a much longer range than the pion field outside a normal nucleus. It is this longer range which determines the scattering cross section of the nuclear fragment. Physically this enhancement comes about because the change in the vacuum state characteristic of nuclei with pion condensates continues for some distance outside the nucleus. As a theoretical description of pion condensates, we use, as customary, the chiral σ model with spontaneous symmetry breaking.

29831 (LBL—16281, pp 173-176) **Nuclear chromodynamics and "anomalons".** Kim, Y.E.; Orlowski, M. (Purdue Univ., West Lafayette, IN). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We propose a new theoretical explanation of anomalons based on a unified theory of nuclear chromodynamics formulated recently by us. 12 references.

29832 (LBL—16281, pp 177-180) **Some anomalon phenomenology.** Watson, P.J.S. (S.I.N., Villigen, Switzerland). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Some unknowns about anomalons are listed and discussed. These unknowns include mass difference from nearest normal state, lifetime, decay mode, reason for enhanced cross section, production in light ion collisions, charge states, Z-dependence of cross sections, associated production, and nuclear excitation or elementary particle. (WHK)

29833 (LBL—16281, pp 185-187) **Are "anomalons" a bag ful'o colorful nucleons.** Kruse, F.; Noack, C.C. (Univ. Bremen, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

One of the more intriguing explanations of the possible existence of "anomalons" (if they do exist) would seem to be in terms of internal color excitations of nuclei. While it follows from confinement in QCD that isolated nuclei (as well as isolated nucleons) must be in color singlet states, the same is not necessarily so for nucleons bound together in a small region of space, viz. a nucleus. Thus one can envisage a nucleus in a color-excited state as composed of localized 3q-systems (i.e. nucleons) which, however, are not all color singlets. We have investigated a particularly simple example of such a model which retains as many of the features of "normal" nuclei as possible, and at the same time stays close to the physical picture of the M.I.T. bag model. We call this a "nuclear bag."

29834 (LBL—16281, pp 209-223) **Evidence on the equation of state of nuclear matter at high densities.** Harris, J.W.; Bangert, D.; Bock, R.; Brockmann, R.; Dacal, A.; Maier, M.; Odyniec, G.; Ortiz, M.E.; Pugh, H.G.; Rauch, W. (Gesellschaft fuer Schwerionenforschung, Darmstadt, W. Germany; Lawrence Berkeley Lab., CA). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Evidence is presented that supports the idea that the pion multiplicity [n/sub π^-/] reflects the maximum density attained in central relativistic nucleus-nucleus collisions. A comparison of the [n/sub π^-] data with predictions of vastly different models (hadrochemical, hydrodynamical, fireball, and cascade) suggests the presence of high-density nuclear matter. A systematic discrepancy between the observed [n/sub π^-] and those predicted in the cascade model correlates with the predicted density increase and anticorrelates with incident energy. This latter observation argues against "exotic" multinucleon pion absorption. Removing energy from the pion-producing degrees of freedom at high densities into potential degrees of freedom, excluded from the cascade model, explains these observations. Disregarding higher order corrections and simply associating this excess energy with the compressional energy, a parabolic nuclear matter equation of state is derived with a compressibility constant K = 240 MeV. Furthermore, the present analysis suggests that for ^{40}Ar + KCl collisions no more than one-third of the available cm energy can be associated with the compressional energy that would manifest itself as collective flow. However, the tremendous overestimate of the cascade model for the [n/sub π^-/] of ^{139}La results in approximately one-half of the cm energy going into compressional energy, neglecting other potential degrees of freedom. Thus the magnitude of the compressional energy may be approaching that of the chaotic thermal energy, and searches for collective effects may become feasible for heavier systems. 26 references.

29835 (LBL—16281, pp 241-249) **Current status of high energy cascade models.** Remler, E.A. (College of William and Mary, Williamsburg, VA). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The cascade model is described on a kind of map of theories. That is, its status is described relative to other approximations to Quantum Mechanics. In addition an explanation for why the area near it in theory space is worth further exploration is given. Finally the current status of such explorations is described. 7 references.

29836 (LBL—16281, pp 251-254) **Scaling properties in the hydrodynamical description of nucleus nucleus collisions at intermediate energies.** Balazs, N.L.; Schuermann, B.; Dietrich, K.; Csernai, L.P. (State Univ. of New York, Stony Brook; Technischen Univ., Muenchen, Garching, W. Germany; Central Research Inst. for Physics, Budapest, Hungary). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Simple scaling properties of heavy ion reactions at intermediate energies are discussed which follow from the hydrodynamical equations. The measured as well as the calculated hydrodynamical inclusive cross sections exhibit scaling in certain kinematical regions. The fireball model obeys the same scaling laws, but leads to a differential cross section with a qualitatively different shape. The experimental data we analyzed did not show evidence for a hydrodynamical flow.

29837 (LBL—16281, pp 263-289) **Critical phenomena at low temperature.** Scott, D.K. (Michigan State Univ., East Lansing). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Critical phenomena in high energy heavy ion collisions have long been of interest in view of the possibility of creating new states of nuclear matter in the form of a pion condensate, density isomer, and quark-gluon plasma. In this paper we discuss critical phenomena which may be relevant at much lower densities and temperatures. Instabilities associated with a liquid-gas phase transition and a nuclear break-up when the compressibility becomes negative are discussed. Although the phenomena are less exotic than those conjectured to occur at high density or temperature, they also rely for their evolution on a hydrodynamical description of nuclear collisions. Questions of time scales, which are important for all types of critical phenomena, are touched upon. Some of the possible experimental signatures, along with present evidence, for the onset of critical behavior are described. A discussion of more general implications of the behavior of the nuclear equation of state at low density and temperature is included. Low temperature critical phenomena have implications on topics as diverse as the nuclear mean free path, anomalons, and the evolution of supernovae. 54 references.

29838 (LBL—16281, pp 291-294) **High energy (30-350 GeV) proton-nucleus collisions and the description of fragmentation as a critical phenomenon.** Hirsch, A.S.; Bujak, A.; Finn, J.E.; Gutay, L.J.; Minich, R.W.; Porile, N.T.; Scharenberg, R.P.; Stringfellow, B.C.; Turkot, F. (Purdue Univ., Lafayette, IN; Fermi National Accelerator Lab., Batavia, IL). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The power law behavior of the fragment yield from high energy proton-nucleus collisions with heavy nuclear targets suggests that fragmentation may be a critical phenomenon. Parameterizing the fragment Helmholtz free energy in a form resembling the Weizsaecker mass formula has enabled us to fit simultaneously all of the observed fragment yields from a given target. We estimate that the critical temperature for a heavy nucleus is about 3-5 MeV. The high energy tails of the fragment kinetic energy spectra provide evidence that all of the observed fragments are created at the same time from a common system. The tails appear to be dominated by the mean-squared momentum of the nucleon in this system, i.e., Fermi motion. Small Coulomb energies arise naturally in this description since the entire remnant system undergoes disassembly simultaneously. 14 references.

29839 (LBL—16281, pp 341-344) **Phase-space constraints on the momenta of projectile fragments.** Murphy, M.J. (Univ. of Washington, Seattle). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The model of projectile fragmentation as a fast reaction which samples the nucleon Fermi momenta in the projectile prior to the collision is revised to reflect the fact that the fragment is also a Fermi gas. The results predict fragment momentum distributions which are narrower than those observed.

29840 (LBL—16281, pp 349-352) **Subthreshold pion production in nucleus-nucleus collisions - a co-operative process.** Shyam, R.; Knoll, J. (Gesellschaft fuer Schwerionenforschung, Darmstadt, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Significant pion production cross-sections have been observed in the collision of two nuclei at the beam energies (<290 MeV/A) where the basic nucleon-nucleon collision cannot produce a pion. The earliest suggestion to understand this process dates back to Fermi. It exploits the fact that the initial intrinsic nucleonic motion offers the necessary extra boost for the elementary nucleon-nucleon (N-N) pion production process. This original idea has recently been reconsidered in a "first N-N collision" model for a quantitative explanation of the pion production at beam energies both below and above threshold. However, with decreasing beam energy this model may become insufficient to explain the production rates as well as the shapes of the pion spectra. Other mechanisms like participation of more than two nucleons into the pion production process and the freezing of the degrees of freedom in the final channel, i.e., formation of the composite nuclei may become increasingly important. Near the absolute threshold (minimum beam energy/nucleon required to produce a pion in the nucleus-nucleus collision), the mechanism of "pionic fusion" in which two nuclei as a whole coherently interact with each other and fuse to form a compound nucleus, converting all the available free energy into a pion, becomes the only possible production mechanism. Before attempting to achieve a detailed microscopic description of the subthreshold pion production process, it is essential to understand clearly the bare kinematical implications of the alternative pion production mechanisms. In particular we carefully rediscuss the single nucleon-nucleon collision mechanism.

29841 (LBL—16281, pp 353-355) **Pion production from peripheral heavy-ion collisions through coherent isobar and isobaric analog giant resonance formation.** Deutchman, P.A.; Madigan, R.L.; Norbury, J.W.; Townsend, L.W. (Univ. of Idaho, Moscow). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

A spin, isobaric-spin formalism for the coherent production of isobars in the peripheral region of a high-energy heavy-ion projectile along with giant isobaric analog excitations has been improved and extended. These changes include the decay of the nucleonic isobars to pions and the removal of the classical straight line assumption along with generalization of the density of states to four bodies. Formal expressions for the total and a differential cross section for pion angular distributions have been obtained.

29842 (LBL—16281, pp 405-408) **Deep inelastic lepton scattering and the quark structure of nuclei.** Vary, J.P.; Pirner, H.J. (Iowa State Univ., Ames; Universitaet Heidelberg, W. Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). Contract AC02-82ER40068. TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Deep inelastic lepton scattering has proven to be a powerful tool for discovering the substructure of the hadrons. In the same way, we expect that deep inelastic scattering (DIS) from nuclei reveals how that substructure is modified by the nuclear medium. We have presented a model which successfully explained DIS on ^{3}He in terms of 3, 6, and 9-quark clusters. We have recently improved the model by incorporating more realistic nuclear wave functions to determine the effects of Fermi motion and to evaluate the geometrical overlap probabilities of cluster formation. Furthermore, we

have included the contributions of sea quarks which are important for understanding the new data with iron targets. We have also extended the model to obtain a description of the elastic charge form factor of ^{3}He. Here, we summarize the principal ingredients of the model and present illustrative results for DIS. 12 references.

29843 (LBL—16281, pp 409-412) **Anomalous behaviour of nuclear structure functions revisited.** Furmanski, W.; Krzywicki, A. (Univ. Paris-Sud, Orsay, France). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

If a nucleus is regarded as a collection of quasi-free nucleons, the nuclear structure functions are simply proportional to the corresponding structure functions of the nucleon. It has been argued that the conventional picture of the nucleus might not hold when the nucleus is probed during a very short time. A simple parton model has been formulated, illustrating the idea of an anomalous behaviour of nuclear structure functions. The nucleus is pictured as one bag of partons. (WHK)

29844 (LBL—16281, pp 413-425) **Stopping process of GeV particles in target nuclei.** Nakai, K. (Univ. of Tokyo, Hongo, Japan). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The issue of whether and how we can produce high energy densities in nuclear matter is one of central subjects in high energy nuclear reaction studies. Theoretical speculations for possible phenomena associated with nuclear matter at high baryon densities or high energy densities stimulated experimental efforts to study high-energy heavy-ion reactions at Bevalac. However, we don't know yet what would be the best energy for generation of high energy densities. Obviously, one needs nucleus-nucleus collisions at high energies, but at higher energies nuclei would become transparent, so that there must be an optimum energy for this purpose. It is, therefore, very important to study the nuclear stopping process and mechanisms of energy deposition of GeV particles in target nuclei. In order to survey the energy region above the Bevalac, we started experimental programs at KEK to study hadron-nucleus interactions in a few GeV regions. The stopping process of GeV particles is discussed based mainly on our experimental results.

29845 (LBL—16281, pp 433-445) **Hydrodynamical aspects of ultrarelativistic heavy ion collisions.** Ruuskanen, P.V. (Univ. of Jyvaeskylae, Finland). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Hydrodynamics with source terms is used to describe the space-time behaviour of hadronic matter produced in ultrarelativistic heavy ion collisions. Resulting energy density in the Central Region (CR) appears to be high enough for the formation of quark-gluon plasma, but the life-time of the plasma (if produced) is very short. In Fragmentation Regions (FR) the energy densities are probably too low for the formation of QCD-plasma. 21 references.

29846 (LBL—16281, pp 447-454) **Transverse expansion at central rapidities in ultra-relativistic heavy ion collisions.** Baym, G. (Univ. of Illinois, Urbana). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

This talk describes the transverse hydrodynamic expansion of the central rapidity regime in a central ultra-relativistic heavy ion collision. The hydrodynamic equations, and numerical and analytic solutions for the expansion are presented. The formation of a "condensation discontinuity" in the dynamical phase transition from a quark-gluon plasma to hadronic matter, and the final freezeout to free-standing hadrons, are also briefly discussed. 10 references.

29847 (LBL—16281, pp 455-457) **Shock fronts without thermalization in ultrarelativistic heavy-ion reactions.** Csernai, L.P. (Central Research Inst. for Physics, Budapest, Hungary). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

If we study a heavy-ion reaction at ultrarelativistic energies $E > 10$ GeV/nucleon, in lab. frame the collision proceeds as follows: (1): The Lorentz contracted projectile passes through the target with almost the speed of light. Since the N-N cross section is very much forward peaked, we assume that the two heavy-ions penetrate through each other with very small momentum loss and only a minor part of the initial kinetic energy will be thermalized inside the projectile of target remnants. Our aim is to describe the target and projectile fragmentation regions in a simple model. It is assumed that the Lorentz contracted projectile in the target frame can be represented as a shock front which, however, contrary to the ordinary compression shock (CS) transmits energy and momentum to the target matter.

29848 (LBL—16281, pp 459-462) **Entropy production by nonquasistatic phase transitions in high-energy heavy-ion reactions.** Csernai, L.P.; Lukacs, B. (Central Research Inst. for Physics, Budapest, Hungary). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

There are different views of which are the most essential entropy-producing mechanisms: shock waves, viscosity, chemical reactions far from equilibrium, or the initial thermalization of the transparent nuclear matter as described in cascade models. However, it is important to note that quasistatic phase transitions (PTs) alone do not lead to entropy generation. Usually the produced entropy is estimated by a shock wave approximation with a given equation of state. If the shock wave approximation is applicable the generated entropy is determined completely, irrespective of the other irreversible processes within the shock front, so also when a PT is present. But in this letter case the extra entropy generation is due to the softening of the equation of state only and not directly connected with the PT. On the other hand, there are doubts about the applicability of the stationary shock wave approximation in the presence of a PT. The conventional shock wave approximation is also not applicable at ultrarelativistic energies, where the matter is expected to become transparent. In these latter cases the amount of generated entropy can only be evaluated by considering each irreversible process individually. The contribution of viscosity [4], non-equilibrium chemical reactions and initial thermalization has already been discussed. The PT may also contribute to entropy generation in itself provided that the transition is not quasistatic. Our aim is to estimate this kind of entropy production.

29849 (LBL—16281, pp 463-477) **Partons in nuclear collisions before recombination.** Hwa, R.C. (Univ. of Oregon, Eugene). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). Contract AT06-76ER70004. TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Nucleus-nucleus collisions at asymptotic energies are considered in the parton basis. Using parton distributions in hadronic processes as input, we calculate, in the context of a simple thermalization model, the parton number density and energy density in the nucleus fragmentation region. 13 references.

29850 (LBL—16281, pp 479-482) **Central collisions of heavy ions in the dual parton model.** Capella, A.; Pajares, C.; Ramallo, A.V. (Universite de Paris-Sud, Orsay, France; Univ. of Santiago de Compostela, Spain). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Average multiplicities and rapidity densities in high energy nucleus-nucleus collisions are computed in the framework of the

dual parton model. Particular attention is given to the case of central collisions. 7 references.

29851 (LBL—16281, pp 483-486) **Thermalization of central products in ultra-relativistic heavy ion collisions.** Date, S.; Miyamura, O.; Ochiai, T.; Sumiyoshi, H.; Suzuki, N. (Waseda Univ., Tokyo, Japan; Osaka Univ., Toyonaka, Japan; Rikkyo Univ., Tokyo, Japan; Univ. of Tokyo, Tanashi, Japan). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Average number of collisions per particle and the energy density are calculated for the central products in ultra-relativistic heavy ion collisions based on the multi-chain model. Within rather short time after the collision, enough collisions per particle take place in the system keeping sufficient energy density for the phase transition to quark-gluon matter (QGM) when the incident energy and the mass number are appropriately high and large. 10 references.

29852 (LBL—16281, pp 489-509) **Strangeness and phase changes in hot hadronic matter.** Rafelski, J. (CERN, Geneva, Switzerland; Universitaet Frankfurt, Germany). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Consequences of the hypothesis that the energy available in the collision of two relativistic heavy nuclei, at least in part of the system, is equally divided among the accessible degrees of freedom are explored. This means that there exists a domain in space in which, in a suitable Lorentz frame, the energy of the longitudinal motion has been largely transformed to transverse degrees of freedom. The physical variables characterizing such a "fireball" are: energy density, baryon number density, and total volume. The basic question concerns the internal structure of the fireball. It can consist either of individual hadrons, or instead, of quarks and gluons in a new physical phase, the plasma, in which they are deconfined and can move freely over the volume of the fireball. It appears that the phase transition from the hadronic gas phase to the quark-gluon plasma is controlled mainly by the energy density of the fireball. Several estimates lead to 0.6-1 GeV/fm^3 for the critical energy density, to be compared with 0.16 GeV/fm^3 in nuclear matter. 18 references.

29853 (LBL—16281, pp 515-518) **Pion radiation by hot quark-gluon plasma.** Rafelski, J.; Danos, M. (CERN, Geneva, Switzerland; Universitaet Frankfurt, Germany; National Bureau of Standards, Washington, DC). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

We consider here an approximately spherical region of the perturbative QCD vacuum, filled with quarks, antiquarks and gluons. For an impenetrable surface between the perturbative and true vacuum states, the inside thermal and degeneracy pressure would lead to an expansion until either pressure equilibrium or a phase transition into individual hadrons is reached. However, if the surface is penetrable, i.e., if it allows transmission of momentum and energy (but not colour) from the inside, then this can lead to a substantial internal energy and pressure loss by radiation - the pressure acting on the surface is reduced, as not all the momentum impinging on the surface has to be reflected. On first thought, the microscopic mechanism for this transmission arises in the following manner: when a fast quark or antiquark hits the boundary, a jet-like structure filled with colour field flux, i.e., a fluxtube might be formed. For sufficiently high quark momentum, this tube, instead of retracting, splits by q anti q pair creation. The leading particle associates with the antiparticle of the pair to form a meson, while the remaining pair particle may retract into the plasma. Difficulties with this model are discussed. (WHK)

29854 (LBL—16281, pp 519-522) **Do light fermions destroy the confinement/deconfinement phase transition.** DeGrand, T.A.; DeTar, C.E. (Univ. of Colorado, Boulder; Univ. of Utah, Salt Lake City). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

Two phenomena may give rise to a phase transition in nuclear matter at high temperatures or high densities. One is associated with the restoration of SU(2) X SU(2) chiral symmetr, the order parameter for which is the scalar density [anti psi psi]; the other is the confinement/deconfinement phase transition (CDPT), the order parameter for which is the "Wilson line" L = e/sup -F/T/ where F is the free energy of an isolated test quark. It has been shown in lattice gauge theories both in numerical calculations and in the strong coupling high temperature approximation that the SU(2) Yang-Mills theory, i.e., a theory with only gluons, undergoes a CDPT at a temperature of the order of the strong interaction confinement scale A. IN SU(3) the pure gluon theory evidently has a first order CDPT. Because of the numerical complexities of introducing fermions into lattice gauge theories and particularly because of difficulties in formulating a chirally invariant lattice version of QCD, much less is known about the chiral symmetry breaking phase transition. It has been suggested that the latter phase transition is connected with the former, but numerical evidence has been based upon such a drastic approximation (the "quenched" approximation) that one cannot make definitive statements at present. Indeed, it is not even known what effect, if any, fermions have on the CDPT. It is the purpose of the study reported upon here to address this question in a model lattice gauge theory constructed to imitate the characteristics of the CDPT of SU(3), and including a chemical potential coupled to baryon number density.

29855 **Transition-state theory for fission angular distributions: A flexible-rotor model.** Prakash, M.; Ramamurthy, V.S.; Kapoor, S.S.; Alexander, J.M. (Department of Physics, State University of New York at Stony Brook, Stony Brook, New York 11794). *Physical Review Letters;* **52**: No. 12, 990-993(19 Mar 1984). Contract AC02-76ER13001.

Current studies of heavy-ion reactions make extensive use of fission-fragment angular distributions to probe the limits of statistical equilibrium. The "standard" theory was derived for a rigid-rotor, transition-state nucleus. Here a more complete theory is developed by inclusion of the dependence of transition-state shape on orientation of the symmetry axis. It is concluded that even this improved application of the liquid drop model cannot give an adequate prediction of the Z^2/A dependence of fission-fragment anisotropies.

29856 **Rank-one inverse scattering problem: Reformulation and analytic solutions.** Hartt, K. (Physics Department, University of Rhode Island, Kingston, Rhode Island 02881). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 695-698(Mar 1984).

Using the K-matrix formalism, we give a simplified reformulation of the S-wave rank-one inverse scattering problem. The resulting Cauchy integral equation, obtained differently by Gourdin and Martin in their first paper, is tailored to rational representations of $F(k) = k \cot(\delta_0)$. Use of such F(k) permits a simple but general solution without integration, giving analytic form factors having a pole structure like the S matrix that are reducible to rational expressions using Pade approximants. Finally, we show a bound state pole condition is necessary, and makes the form factor unique.

29857 **Multifragmentation and the partition of angular momentum: General statistical theory.** Moretto, L.G. (Istituto Nazionale di Fisica Nucleare, Laboratorio Nazionale del Sud, Catania, Italy and Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 3, 843-846(Mar 1984). Contract AC03-76SF00098.

In the wake of the statistical theory for angular momentum in binary (deep inelastic) processes, a statistical theory for the distri-

bution of angular momentum between the fragments has been developed for the case of multifragmentation (three or more fragments). From the generalized partition function, the average energy and angular momentum of each fragment are derived as well as the corresponding variances. The first moments in the two quantities suggest a "rigid rotation" limit analogous to the binary case. The components of the polarization tensor are calculated for each fragment. The role of thermally generated angular momentum versus that arising from rigid rotation is discussed. Comments are offered on the applicability of the theory to various reactions.

29858 **Approximate Dirac scattering amplitudes: Eikonal expansion.** Wallace, S.J.; Friar, J.L. (Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 956-966(Mar 1984).

Eikonal expansions are developed for the equivalent cases of the Dirac equation with scalar and vector potentials and the Schroedinger equation with central and spin-orbit potentials. Second-order corrections to the Glauber approximation are developed. Numerical calculations relevant to proton-nucleus elastic scattering illustrate that the sequence of eikonal amplitudes converge to the Dirac amplitudes in the 300—800 MeV range considered and for forward scattering angles $0° <$ or $= \theta$/sub c.m./$<$ or $\approx 40°$.

29859 **Approach to chemical equilibrium in thermal models.** Boal, D.H. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720 and Physics Department, Simon Fraser University, Burnaby, British Columbia, Canada V5A 1S6). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 967-972(Mar 1984).

The experimentally measured (μ^-, charged particle)/(μ^-,n) and (p,n/p,p′) ratios for the emission of energetic nucleons are used to estimate the time evolution of a system of secondary nucleons produced in a direct interaction of a projectile or captured muon. The values of these ratios indicate that chemical equilibrium is not achieved among the secondary nucleons in noncomposite induced reactions, and this restricts the time scale for the emission of energetic nucleons to be about 0.7×10^{-23} sec. It is shown that the reason why thermal equilibrium can be reached so rapidly for a particular nucleon species is that the sum of the particle spectra produced in multiple direct reactions looks surprisingly thermal. The rate equations used to estimate the reaction times for muon and nucleon induced reactions are then applied to heavy ion collisions, and it is shown that chemical equilibrium can be reached more rapidly, as one would expect.

29860 **Thermal equilibrium in proton induced reactions.** Boal, D.H.; Reid, J.H. (Theoretical Science Institute, Department of Physics, Simon Fraser University, Burnaby, British Columbia, Canada V5A1S6). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 973-984(Mar 1984).

The thermal model, which has been applied successfully to inclusive cross sections in heavy ion reactions, is applied here to the (p,p′) and (p,π) reactions. The thermal source temperatures and velocities determined in proton induced reactions are similar to those found in heavy ion reactions, although the temperatures are cooler in proton induced reactions. Several methods can be used to estimate the number of nucleons in the thermal source, and these are found to give roughly consistent answers. Using a classical dense gas model, an estimate is made of the lifetime of the hot source. As one might expect, the lifetime is calculated to be in the 10^{-23} sec range, indicating that the hot region probably does not cleanly separate from the nucleus before it cools off. A discussion of the limiting temperature behavior observed in this analysis is also given.

29861 **Feynman-Goldstone diagrams in a time-dependent basis.** Baranger, M.; Zahed, I. (Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 3, 1005-1009(Mar 1984). Contract AC02-76ER03069.

A generalization of many-fermion Feynman-Goldstone diagrams is derived based on a time-dependent unperturbed Hamiltonian along with a time-dependent reference state. In lowest order, the time-dependent Hartree-Fock equations follow immediately from the same arguments which lead to static Hartree-Fock when the basis is time independent. Systematic corrections to the time-dependent Hartree-Fock mean-field approximation are obtained through higher order diagrams.

29862 **High-energy nuclear collisions.** Nagamiya, S.; Gyulassy, M. (Dept. of Physics, Faculty of Science Univ. of Tokyo, Hongo, Bunkyo-ku Tokyo). *Advances in Nuclear Physics;* **13**: 201-315(1984). Contract W-7405-ENG-48.

This chapter examines current interpretations of the available data on the properties of dense, highly excited nuclear matter. Discusses high-energy heavy-ion accelerators; the high-density-temperature nuclear domain; the experimental view; theoretical tools; quantal and classical aspects; classical tools; statistical models; hydrodynamics; intranuclear cascade; nonequilibrium quantum scattering; elements of the reaction mechanism; collision geometry; evidence for multiple collisions; inclusive proton spectra; composite formation; pion production; strange-particle production; Coulomb final-state interactions; forward and backward spectra; spectator physics; the physics of dense nuclear matter; nuclei entropy; and novel states of nuclei. Demonstrates that the field of high-energy nuclear collisions is still in a state of rapid development and flux. Recognizes the vast body of experimental work that has clarified the basic reaction mechanism. Suggests that future research focus on the following areas: measurements of extremely small cross sections; y and lepton yields; neutron-rich isotopes; multibaryonic excited states; and higher and lower beam energies.

29863 **Neutron and proton matrix elements for low-lying 2^+ transitions and the probe dependence of the nuclear deformation parameter.** Bernstein, A.M. (Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Physics; Massachusetts Inst. of Tech., Cambridge (USA). Lab. for Nuclear Science); Brown, V.R. (Lawrence Livermore National Lab., CA (USA)); Madsen, V.A. (Oregon State Univ., Corvallis (USA). Dept. of Physics). *Comments on Nuclear and Particle Physics;* **11**: No. 5, 203-215(May 1983).

It is shown that the ratio of multipole matrix elements Msub(n) and Msub(p) of neutrons and protons in the nucleus is not simply proportional to N/Z as in the homogeneous collective model but depends on the shell structure of the nucleus. Correspondingly, the deformation parameter for nuclear neutrons is in general different from that of protons. This difference results in a dependence of the measured deformation parameter delta for a given transition on the external field which produces it. The systematics of Msub(n)/Msub(p) for single-closed shell and the external field dependence of delta is demonstrated for the low-lying collective 2^+ transitions.

29864 **Selective population of high-j states via heavy-ion induced transfer reactions.** Bond, P.D. (Brookhaven National Lab., Upton, NY (USA)). *Comments on Nuclear and Particle Physics;* **11**: No. 5, 231-240(May 1983).

The unique aspects of certain heavy-ion induced transfer reactions to selectively populated high spin single particle states are discussed. The use of these reactions, in conjunction with gamma-ray coincidence work, to find previously unobserved high spin states with simple configuration is demonstrated.

29865 **Anomalons: statistical fluctuation or physical fact.** Friedlander, E.M. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). *Comments on Nuclear and Particle Physics;* **11**: No. 3, 127-137(Mar 1983).

This Comment considers the central statistical arguments used to prove that the observations of short mean free paths of projectile fragments from relativistic heavy ion collisions could be attributed to statistical fluctuations only with unacceptably low probabilities. Lower limits for the statistical sample sizes, necessary for further studies of this effect, are discussed within the framework of a simple 'anomalon' model.

29866 **Nuclear saturation and nuclear forces.** Day, B.D. (Argonne National Lab., IL (USA)). *Comments on Nuclear and Particle Physics;* **11**: No. 3, 115-126(Mar 1983).

Theoretically reasonable nucleon-nucleon potentials that are fitted to two-body data are used to calculate nuclear saturation properties. The results show that some physical effect besides a two-body potential is required. Including a three-body force greatly improves the calculated saturation properties.

From 20. IEEE annual conference on nuclear and space radiation effects; Gatlinburg, TN, USA (18 Jul 1983).

Using simple assumptions, it is possible to study the transmission of a monoenergetic parallel electron beam in a one dimensional multilayer material, knowing experimental or Monte Carlo results obtained in homogeneous media.

29870 **(INIS-mf—8364) Projection factors of the ranges of low energy ions.** Mannsperger, H. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1982. 39p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780169.

The fundamental question of the ratio of the experimentally available projected ranges to the complete ranges of heavy ions in solids in dependence of the mass ratio of the target atoms and the projectile ions was studied in this thesis. The measurements were performed in the reduced energy range of $0.04 < \text{epsilon} < 1.0$. By a renormalization of the projected ranges measured in this thesis to ranges from the literature the projection factors could be obtained on the base of the universal energy-range relation presented there.

From 23. conference on nuclear spectroscopy and nuclear structure; Moscow, USSR (19 Apr 1983).

29872 **(JINR-R—3-83-180) Investigation of the thin magnetized film transmission in ultracold neutron permanent flow.** Ignatovich, V.K.; Taran, Yu.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1983. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701690.

The theory of transmission of ultracold neutron permanent flow through sets of thin magnetized films is developed in the model of surface depolarization taking into account the film nonsymmetry and the multiple reflections between the films. Two and three film sets are investigated. The transmission of a two film set is calculated when a spin flipper was placed between the films. It is shown that for determining the nonsymmetric film polarizing properties the rearrangement or turn of the films is required. The three film set with two flippers provides a possibility to determine these properties on the invariable experimental configuration, and thus to eliminate the systematical errors. This method may be used to investigate the effect of film preparation technique on the film properties in order to improve it.

29873 (LBL—16281, pp 585-588) **Stopping of 200 GeV gold nuclei in nuclear emulsions.** Waddington, C.J.; Freier, P.S.; Fixsen, D.J. (Univ. of Minnesota, Minneapolis). Dec 1983. NTIS, PC A99/MF A01. Order Number DE84005862. (CONF-830675—). TI84005862

From 6. high energy heavy ion study and 2. workshop on anomalons; Berkeley, CA, USA (28 Jun 1983).

The residential ranges of ^{197}/sub 79/Au-nuclei stopping in nuclear emulsions has been measured for nuclei with an incident energy of 991 MeV per amu. The mean ranges observed are appreciably less than those predicted from measurements made on energetic particles of lower charge. However, by considering higher order correction terms to the rate of energy loss, good agreement can be obtained between the predicted and observed ranges. 14 references.

29874 **(MPQ—73) Heavy ion beam heated cylinders: Planning for hot dense matter experiments at GSI.** Arnold, R.; Meyer-ter-Vehn, J. (Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.)). Apr 1983. 17p. (CONF-830354—2). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751296.

From International workshop on atomic physics for ion driven fusion; Paris, France (21 Mar 1983).

Stopping power calculations for heavy ions of 1-100 GeV energy and results of 1D and 2D simulations of stretched target cylinders heated by intense heavy ion beams are presented. Plans to perform such experiments at GSI/Darmstadt and physics areas to be investigated are discussed.

29875 **(ORNL/TM—9023) Report to the ^{238}U discrepancy task force on SIOB fits to the ORNL, CBNM, and JAERI transmission data.** Olsen, D.K. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 39p. (ENDF—338). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012026.

The computer code SIOB has been used to obtain least-squares simultaneous-sample shape fits to the recent ^{238}U transmission data of ORNL, CBNM, and JAERI over the energy regions 1460 to 1820 eV, 2470 to 2740 eV, and 3820 to 4000 eV. The fits indicate that much of the systematic discrepancy in the published neutron widths from these data arose in the data analysis procedure. Except for the 3820- to 4000-eV JAERI data, the systematic differences in the resulting neutron widths from the present widths are larger than those contained in any existing evaluation. These fits were performed as part of the work for the NEANDC ad hoc ^{238}U Discrepancy Task Force. 20 references.

29876 **Multiple scattering from an infinite plane slab.** Soper, A.K. (Los Alamos National Lab., NM (USA)). *Nuclear Instruments and Methods in Physics Research;* **212**: No. 1-3, 337-347(1 Jul 1983).

A straightforward iterative procedure is used to calculate multiple scattering from an infinite slab over a wide range of slab thicknesses. For thin slabs, the calculations agree well with earlier work. In particular, we find that the ratio of total scattered to primary scattered neutron currents for a thin slab is represented by the function 1/(1-delta), where delta is the ratio of secondary to primary currents. For thick slabs, the results are compared with Monte Carlo simulations of polyethylene and iron. The agreement is generally good, but the method exaggerates the ability of poly-

ethylene to attenuate 10 MeV neutrons. A model of two parallel slabs is used to discuss the reflectivity of the walls of a neutron collimator.

29877 **Some results of transfer matrix calculations for thermal neutrons.** Kim, S.Y.; Aronson, R. (New York University, New York, New York 10003). *Nuclear Science and Engineering;* **73**: No. 1, 56-65(Jan 1980).

The transfer matrix method is used to solve the Milne problem for a half-space for neutrons interacting with a moderator at temperature T. Two different scattering models are considered. They are the free monatomic gas of arbitrary molecular mass with constant cross sections in the center-of-mass system, and the Nelkin kernel for water. Both models permit an additional 1/v absorption cross section. The authors have obtained accurate numerical values for the diffusion length, the extrapolated end point, the critical absorption strength, and the boundary heating for a variety of values of the parameters. Comparison is made both with other calculations and with experiments.

29878 **Application of track calculations to radiobiology. 2. Calculations of microdosimetric quantities.** Brenner, D.J.; Zaider, M. (Los Alamos National Lab., NM). *Radiation Research;* **98**: No. 1, 14-25(Apr 1984). Contract AC02-78EV04733;W-7405-ENG-36.

In this second paper of a series, Monte Carlo-simulated proton tracks in water vapor are analyzed to yield a range of quantities that are of radiobiological interest. These include proximity functions of energy deposition, lineal energy distributions in micrometer and nanometer site sizes, and radial energy distributions. Many of these quantities cannot be measured with current experimental techniques. Some results are compared with those from analytic calculations. Also the effect on such quantities of the uncertainties in cross-sectional data used in the original Monte Carlo calculations is assessed, as is the effect of including nonionizing energy-loss events for analysis in the calculation.

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29882 **(UCRL—89743-Rev.1) Fractional quantization of the Hall effect.** Laughlin, R.B. (Lawrence Livermore National Lab., CA (USA)). 27 Feb 1984. Contract W-7405-ENG-48. 13p. (CONF-840284—1-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84008894.

From 3. international winterschool on new developments in solid state physics; Salzubrg, Austria (26 Feb 1984).

Portions are illegible in microfiche products.

The Fractional Quantum Hall Effect is caused by the condensation of a two-dimensional electron gas in a strong magnetic field into a new type of macroscopic ground state, the elementary excitations of which are fermions of charge 1/m, where m is an odd integer. A mathematical description is presented.

29883 **First-principles calculations of materials properties.** *Energy Technology Review;* 24-33(Apr 1984).

Many Laboratory programs require accurate and detailed information about the thermodynamic properties of materials over ranges of temperature and density that are experimentally inaccessible. Dramatic advances in electron-band theory (the quantum-mechanical theory of electrons in solids and liquids) enable us to calculate reliably, for many materials, these thermodynamic properties from first principles.

29884 **Observation of chaotic behavior in an electron-hole plasma in Ge.** Held, G.A.; Jeffries, C.; Haller, E.E. (Department of Physics and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review Letters;* **52**: No. 12, 1037-1040(19 Mar 1984). Contract AC03-76SF00098.

Spontaneous current oscillations which develop chaotic behavior are reported for an electron-hole plasma in a crystal of Ge at 77 K in parallel electric and magnetic fields. The observed behavior includes a period-doubling route to chaos with increasing applied electric field, regions of broadband noise which contain noise-free periodic windows, and bifurcations from quasiperiodic states to turbulence. A rate-equation model, which includes nonlinear coupling between unstable and damped plasma density waves, is presented.

29885 **Coexistence of superconductivity and magnetism.** Maple, M.B. (Dept. of Physics, Univ. of California, San Diego, La Jolla, CA 92093). pp 279-346 of Advances in superconductivity. Deaver, B.; Ruvalds, J. New York, NY; Plenum Publishing Corp. (1983). Contract AT03-76ER70227.

This chapter traces the evolution of the subject of the interplay between superconductivity and magnetism, particularly the coexistence of these 2 phenomena, during the past 2 1/2 decades. The major developments and key issues are emphasized in order to provide the reader with an overview of the field since its inception in the late 1950's. Discusses the effect of rare earth ions on superconductivity in zero magnetic field; effect of rare earth ions on superconductivity in finite magnetic field (external and internal); ternary rare earth systems; exchange interaction; ferromagnetic superconductors; sinusoidally modulated magnetic state; antiferromagnetic superconductors; and superconductivity and competing magnetic interactions. Bib.

29886 **Re-entrant superconductivity.** Ruvalds, J. (Dept. of Physics, Univ. of Virginia, Charlottesville, VA 22901). pp 475-514 of Advances in superconductivity. Deaver, B.; Ruvalds, J. New York, NY; Plenum Publishing Corp. (1983). Contract AS05-81ER10959.

This chapter reviews the studies of re-entrant superconductivity starting from the original efforts to unravel the competing effects of magnetic ordering and superconducting electron pairing. Uses the Kondo effect and the theory of Mueller-Hartmann and Zittartz in order to explain the variations in T /SUB c/ with impu-

rity content for a wide variety of systems. Finds that the analysis supports the validity of applying the Kondo analysis to systems with dilute concentrations of magnetic impurities. Discusses superconductor phenomena; enhanced transition temperatures; RKKY coupling and dimensionality; and rare earth compound examples.

29887 **(BNL—34552) Finite element method for treating nearly one way wave propagation.** Goldstein, C.I. (Brookhaven National Lab., Upton, NY (USA)). 1984. Contract AC02-76CH00016. 10p. (CONF-8406113—2). NTIS, PC A02; 3; GPO Dep. Order Number DE84010294.

From 5. IMACS international symposium; Bethlehem, PA, USA (19 Jun 1984).

Paper copy only, copy does not permit microfiche production.

A numerical method is described for approximately solving stationary wave propagation models for which the propagation is, for the most part, occurring in one principal direction. This occurs, for example, in connection with the exterior scattering problem at distances sufficiently far away from the obstacle. This also frequently occurs in wave propagation problems in a duct or waveguide (including underwater acoustic wave propagation). The numerical method is based on first factoring out the main propagation direction is the solution and then applying the finite element method. Since the solution being approximated is much smoother, it is seen that there is a great reduction in the number of grid points compared to standard finite element and finite difference methods. This is validated by means of numerical experiments. 132 references.

29888 **(IC—82/197) Gauge and non-gauge curvature tensor copies.** Srivastava, P.P. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701660.

A procedure for constructing curvature tensor copies is discussed using the anholonomic geometrical framework. The corresponding geometries are compared and the notion of gauge copy is elucidated. An explicit calculation is also made.

29889 **(IC—82/205) Supersymmetric particles in N=2 superspace: phase space variables and Hamilton dynamics.** Azcarraga, J.A. de; Lukierski, J. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1982. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701656.

We consider a reparametrization invariant model recently proposed based on the N-extended superPoincare group with central charges, which leads to trajectories on the N-extended Salam-Strathdee superspace. The case N=2 is discussed in detail. We show that the N=2 model is invariant under four real supergauge transformations generated by first class odd constraints which imply the Dirac equation. We introduce one bosonic (which fixes the reparametrization) and four real spinorial (which fix the supergauges) gauge conditions and calculate the Dirac brackets for the remaining unconstrained variables (x-vector,p-vector,thetasup(α),theta-barsup(α-dot)). The equations of motion are written in Hamiltonian form, with H varies as to Tr set containing Qsub(αi),Q-barsub(β-doti) and correspond to the Heisenberg equations of the (first) quantized theory.

29890 **(IC—82/206) Stability of merons in gravitational models.** Akdeniz, K.G.; Hacinliyan, A.; Kalayci, J. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1982. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701661.

The stability properties of merons are investigated in gravitational models by taking the DeAFF model as a theoretical laboratory. We find that in gravitational models containing Yang-Mills fields merons are unstable. Stability might be possible in N=4 supergravity models with Asub(μ)=0.

29891 **(IC—82/213) Equations of motion for a radiating charged particle in electromagnetic fields on curved spacetime.** Prasanna, A.R. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1982. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701662.

In this note we present the equations of motion for a radiating charged particle in the framework of general relativity and give a formal procedure of solving the system numerically using iterations, when the motion is confined to the equatorial plane.

29892 **(IC—83/3) Symmetry aspects of Kaluza-Klein theories.** Strathdee, J. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1983. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701664.

General features of Kaluza-Klein theories are discussed with emphasis on the problem of determining the ground state geometry and its symmetry. A technique is described for setting up harmonic expansions in cases where the internal space is a coset space.

29893 **(IC—83/18) Finite temperature effects of quantum gravity.** Mukku, C.; Sayed, W.A. (International Centre for Theoretical Physics, Trieste (Italy)). Feb 1983. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701663.

We obtain the temperature dependent contributions to the free energy density of a system of thermal gravitons and scalars. These terms are qualitatively different in character and, unlike the previously examined cases of scalars, vectors, and fermions, can contribute negatively to the free energy density in the high temperature limit.

29894 **(IC—83/34) SO(4) gauging of N=2 supergravity in seven dimensions.** Salam, A.; Sezgin, E. (International Centre for Theoretical Physics, Trieste (Italy)). Mar 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701665.

We obtain N=2 supergravity theory coupled to N=2 matter by truncation of the N=4 theory in seven dimensions. The truncated theory possesses global GL(4,R) x local composite SO(4) invariance. We then gauge the global SO(4) subgroup of GL(4,R), and preserve the composite SO(4) symmetry, following the method of de Wit and Nicolai in d=4. The resulting action has a potential which contains all ten scalars of the theory. The single second rank antisymmetric tensor field in the theory has a generalized field strength, which contains the Chern-Simons 3-form.

29895 **(IC—83/41) Time-energy uncertainty relation and irreversibility in quantum mechanics.** Bonifacio, R. (International Centre for Theoretical Physics, Trieste (Italy)). May 1983. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701657.

We think that the meaning of time energy uncertainty relation is rather obscure in terms of a continuous description of time evolution, whereas it is consistent with a finite difference equation for the density operator with time steps tau $>=(h/2\pi)/2\Delta E$. This equation intrinsically gives irreversible state reduction to the diagonal form leading to "ergodic" behaviour even at the classical limit.

29896 **(IC—83/46) Comments on microscopic mechanics, generalizations of classical mechanics and Planck's oscillators.** Yussouff, M. (International Centre for Theoretical Physics, Trieste (Italy)). May 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701658.

The new microscopic mechanics removes the dichotomy of physics into classical and quantum phenomena. Its physical picture and connections with generalizations of classical mechanics are discussed. It gives a new meaning to Bohr's frequency relation and Planck's oscillators.

29897 **(IC—83/48) Finite temperature spinor pregeometry.** Denardo, G.; Spallucci, E. (International Centre for Theoretical Physics, Trieste (Italy)). May 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701671.

We obtain the Einstein and Yang-Mills actions as induced actions. Free fermion fields are considered as the only fundamental pregeometric objects. We study in detail the temperature behaviour of the induced Newton and gauge coupling constants. Both of them are seen to decrease as the temperature grows.

29898 **(IC—83/51) Coarse grained description of time evolution: Irreversible state reduction and time-energy relation.** Bonifacio, R. (International Centre for Theoretical Physics, Trieste (Italy)). May 1983. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701659.

We show that a proper coarse-grained description of time evolution leads to a finite difference equation with step tau for the density operator. This implies state reduction to the diagonal form in the energy representation and a quasi ergodic behaviour of quantum mechanical ensemble averages. An intrinsic time-energy relation tau$\Delta E > = (h/2\pi)/2$ is proposed, and its equivalence to a time quantization is discussed.

29899 **(INIS-BR—101) Quantum theory of the laser radiation scattering by electrons in magnetic fields.** Rochlin, H. (Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica). Aug 1981. 105p. (In Portuguese). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84701921.

A system composed of an electron in a static magnetic field interacting with the quantized electromagnetic field, within the electric-dipole and the nonrelativistic approximations (with a cutoff in momentum space) is considered. The Heisenberg equations are solved exactly and the time evolution of the electric field is determined. This result is then used to obtain the spectrum of the scattered radiation when the initial state of the field is coherent, aplying the theory of photodetection. This theory is thoroughly discussed. Several expressions proposed in the literature for the time-dependent spectrum are compared and conditions for the equivalence of these expressions are analyzed. Moreover, inaccuracies in previous treatments of the theory of photodetection are corrected. The results allow the line shape of the scattered radiation to be analyzed for magnetic fields up to 10^{12}G. The quantization of the eletromagnetic field allows one to consider the role of the natural line width, which becomes important near ressonance. In particular, the dependence of the line width on the magnetic field is analyzed. This treatment includes the renormalization of the electron mass, which keeps the results finite when the cutoff goes to infinity.

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29905 **(JINR-R—2-83-76) Relitivistic kinematics in "observable" variables.** Strel'tsov, V.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701654.

A formulation of special relativity in non-Euclidian space defined by the metric form of $d\tau^2 = dx^1 dx^2 + dx^3 dx^4$ is discussed. It is noted that in particular case of (1+1) dimensions new variables $x^1 = t-z$ and $x^2 = t+z$ are directly observable in (used for definition of concepts of simultaneity and distance) radar method of value. Transition to these significantly simplifies special Lorentz transformations, theorem of velocity "summation" etc. In a general case such a simple picture does not take place. However, within the framework of this approach the notation of the Dirac equation and of the expression for probability current density, the connection of spinors with 4-vectors and others are also simplified.

29906 **(JINR-R—2-83-377) Hamiltonian structure U(p,q) of nonlinear Schroedinger equation with nonvanishing boundary equations.** Pashaev, O.K.; Sergeenkov, S.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701653.

Canonical structure and integrability of Nonlinear Schroedinger Equation with noncompact U(p, q) isogroup is investigated. Unitarity condition rakes as to Corrider the interaction problem for infinite number of particles or the problem under nonvanishing boundary conditions. The Poisson brackets between the scattering matrix elements are calculated explicitly and the time evolution of the spectral data is given. The existence of infinite sets of local involutive conservation laws is established as well.

29907 **(TC—48413) Hidden variables and locality in quantum theory.** Shiva, Vandana. (University of Western Ontario, London (Canada)). Dec 1978. 205p. Canadian Theses on Microfiche Service, National Library of Canada, Ottawa, Canada K1A 0N4. Order Number DE84701924.

The status of hidden variables in quantum theory has been debated since the 1920s. The author examines the no-hidden-variable theories of von Neumann, Kochen, Specker and Bell, and finds that they all share one basic assumption: averaging over the hidden variables should reproduce the quantum mechanical probabilities. Von Neumann also makes a linearity assumption, Kochen and Specker require the preservation of certain functional relations between magnitudes, and Bell proposes a locality condition. It has been assumed that the extrastatistical requirements are needed to serve as criteria of success for the introduction of hidden variables because the statistical condition is trivially satisfied, and that Bell's result is based on a locality condition that is physically motivated. The author shows that the requirement of weak locality, which is not physically motivated, is enough to give Bell's result. The proof of Bell's inequality works equally well for any pair of commuting magnitudes satisfying a condition called the degeneracy principle. None of the no-hidden-variable proofs apply to a class of hidden variable theories that are not phase-space reconstructions of quantum mechanics. The author discusses one of these theories, the Bohm-Bub theory, and finds that hidden variable theories that re all

the quantum statistics, for single and sequential measurements, must introduce a randomization process for the hidden variables after each measurement. The philosophical significance of this theory lies in the role it can play in solving the conceptual puzzles posed by quantum theory.

29908 **(UCID—20075) Computer-generated movie on the short pulse electromagnetic behavior of wire objects.** Miller, E.K.; Dease, C.G. (Lawrence Livermore National Lab., CA (USA)). May 1984. Contract W-7405-ENG-48. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012032.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The results shown in this movie were obtained using the Thin-Wire Time Domain (TWTD) code. This code is based on a thin-wire approximation to the electric-field integral equation. The solution employs subsectional collocation with a nine-term quadratic basis function and delta-function weights, in both space and time.

29909 **Differential scattering (CIDS) of circularly polarized light by dense particles.** Bustamante, C.; Maestre, M.F.; Keller, D.; Tinoco, I. Jr. (Department of Chemistry, University of New Mexico, Albuquerque, New Mexico 87131). *Journal of Chemical Physics;* **80**: No. 10, 4817-4823(15 May 1984).

The circular intensity of differential scattering (CIDS) for structures composed of an arbitrary collection of point polarizable groups has been obtained in analytical form using the second Born approximation, both for oriented and rotationally averaged structures. It is found that: (i) A CIDS signal is present in the forward direction parallel to the light beam. This forward CIDS does not appear in CIDS patterns calculated using the first Born approximation alone; (ii) the magnitude and shape of CIDS patterns for oriented periodic structures depend only on the properties of one unit cell of the structures and are independent of the overall size; (iii) CIDS can exist for scatterers made up of a collection of spherically symmetric point polarizable groups. In the first Born approximation anisotropic polarizable groups are required for the CIDS to be different from zero. In the second Born approximation the anisotropy necessary for CIDS is generated by the interaction between the scattering groups; (iv) the CIDS is largest when the chiral dimensions of the scatterer are of the order of the wavelength of light.

29910 **Comparisons of classical and quantum dynamics for initially localized states.** Davis, M.J.; Heller, E.J. (Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Chemical Physics;* **80**: No. 10, 5036-5048(15 May 1984). Contract W-31-109-ENG-38.

We compare the dynamics of quantum wave packets with the dynamics of classical trajectory ensembles. The wave packets are Gaussian with expectation values of position and momenta which centers them in phase space. The classical trajectory ensembles are generated directly from the quantum wave packets via the Wigner transform. Quantum and classical dynamics are then compared using several quantum measures and the analogous classical ones derived from the Wigner equivalent formalism. Comparisons are made for several model potentials and it is found that there is generally excellent classical—quantum correspondence except for certain specific cases of tunneling and interference. In general, this correspondence is also very good in regions of phase space where there is classical chaos.

29911 **(DOE/ER/10711—3) Applied mathematics of transport theory. Summary progress report.** Greenberg, W.; Zweifel, P.F. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)). Mar 1984. Contract AS05-80ER10711. 13p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011498.

A brief summary is given of research in the areas of: abstract transport theory; reacting flow systems, homogenization of transport problems, and iterative calculations; gas dynamics; and problems in statistical mechanics, plasma stability, and mathematical transport theory. (GHT)

29912 **(IC—81/104) Spectral characterization of abstract functions.** Basit, B. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1981. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701642.

Let G be locally compact abelian group and GAMMA its dual group. Let X be locally convex complete space and X^* its dual space. In this paper we give spectral characterization of bounded uniformly continuous functions from G to X. Also, we give applications to the characterization of solutions of functional differential equations.

29913 **(IC—82/192) Integral representation of the exponentially convex functions of infinitely many variables on Hilbert spaces.** Okb El-Bab, A.S.; El-Shazli, M.S. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701643.

Our main purpose in this paper is to apply the general theory of eigenfunctions expansions of self-adjoint operators to find the integral representation of the exponentially convex function of infinitely many variables on Hilbert spaces. The connection with the moment problem is also discussed.

29914 **(IC—82/226) Transformation methods for constrained optimization.** Gunay, S. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 19p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701644.

We discuss transformation methods for solving nonlinear constrained minimization problems. A particular application is described in detail. Numerical results are presented and discussed.

29915 **(IC—82/227) Inherent errors in the methods of approximations. A case of two point singular perturbation problem.** Tangmanee, S. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701645.

In this paper we discuss two related topics. First we show that the classical numerical techniques, when applied to the two-point singular perturbation problem, produce incorrect results. Better estimates by the classical methods can be obtained only when h is very small and depending on small parameter epsilon, affecting the second derivative. Thus, because of the limitation of the computer system, the discrete system involved will become unstable. Secondly we construct a class of three-point difference schemes for this problem and show that these schemes give approximate solutions converging to the analytical solutions uniformly in epsilon of order h where h is a discretization step size.

29916 **(IC—83/55) Matrix transformations and sequence spaces.** Nanda, S. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1983. 63p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84701646.

In most cases the most general linear operator from one sequence space into another is actually given by an infinite matrix and therefore the theory of matrix transformations has always been of great interest in the study of sequence spaces. The study of general theory of matrix transformations was motivated by the special results in summability theory. This paper is a review article which gives almost all known results on matrix transformations. This also suggests a number of open problems for further study and will be very useful for research workers.

29917 **(JINR—E-2-83-281) Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator.** Ilchev, A.S.; Mitryushkin, V.K. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701647.

The summation technique proposed earlier has been applied to the perturbation theory expansions for the ground state energy

of the quantum mechanical anharmonic oscillators V(x)=gxsup(2N). The extremely rapid growth of the expansion coefficients in the above example is shown to be not an obstacle for the summation procedure. The utilization of the principle of minimal sensitivity proposed by P. M. Stevenson in another paper has been elaborated.

29918 **Generalized vector products, duality, and octonionic identities in D = 8 geometry.** Duendarer, R.; Guersey, F.; Tze, C. (Gibbs Laboratory and Physics Department, Yale University, New Haven, Connecticut 06511). *Journal of Mathematical Physics (New York);* **25**: No. 5, 1496-1506(May 1984). Contract AC02-76ER03075.

In an explicit, unified, and covariant formulation, we study and generalize the exceptional vector products in R^8 of Zvengrowski, Gray, and Kleinfeld. We derive the associated general quadratic, cubic, and quartic G_2 invariant algebraic identities and uncover an octonionic counterpart to the d = 4 quaternionic duality. When restricted to seven dimensions the latter is an algebraic statement of absolute parallelism on S^7. We further link up with the Ogievetski—Tzeitlin vector product and obtain explicit tensor forms of the SO(7) and G_2 structure constants. SO(8) transformations related by Triality are characterized by means of invariant tensors. Possible physical applications are discussed.

29919 **(AD-A—136768/9) Nonlinear dynamic polarization force on a relativistic test particle in a nonequilibrium beam-plasma system. Technical report.** Brandt, H.E. (Harry Diamond Labs., Washington, DC (USA)). Sep 1983. 29p. (HDL-TR—1994). NTIS, PC A03/MF A01.

The effective charge of a test particle in a nonequilibrium beam-plasma system is the sum of the actual charge and the dynamic polarization charge surrounding it. The contribution of its polarization charge to the total force on a relativistic test particle, namely the dynamic polarization force, is calculated to fourth order in the total electromagnetic field for a slowly varying, nearly spatially independent background distribution with no external fields. This relation is needed in calculations of collective radiation processes and the conditions for the occurrence of radiative instability in relativistic beam-plasma systems.

From US/Japan symposium on compact toroids; Princeton, NJ, USA (20 Feb 1983).

Portions are illegible in microfiche products.

The parameter B/sub e//nr/sub p/ (here, B/sub e/ is applied magnetic field strength, nr/sub p/ is the plasma density-radius product) is proposed as a key parameter for spheromak heating studies. If B/sub e//nr/sub p/ is too large, increased magnetic fluctuations limit heating; low B/sub e//nr/sub p/ value results in excessive radiation losses. An optimum range appears to be B/sub e// nr/sub p/ $\sim$ 1 to 5 x 10^{-20} Wb.

29921 **(DOE/DP/40152—T5) VUV instrument calibrations for laser-plasma studies.** Rockett, P.D.; Bird, C.R.; Shepherd, R. (KMS Fusion, Inc., Ann Arbor, MI (USA)). May 1984. Contract AC08-82DP40152. 14p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010507.

Techniques for spectral ar ° intensity calibrations of laser-plasma VUV instrumentation are described. A flexible laboratory x-ray station is shown to yield creditable results.

29922 **(DOE/ET/51013—115) Analytic solution of the 2-D Fokker-Planck equation for LH current drive.** Krapchev, V.B.; Hewett, D.W.; Bers, A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Mar 1984. Contract AC02-78ET51013. 8p. (CONF-840311—8; PFC/CP—84-2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010314.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We solve analytically the linearized steady-state 2-D Fokker-Planck equation for the resonant electrons in the presence of strong rf fields. In this case the diffusion coefficient D = D/sub QL/nu v/sub t/^{2} >> 1, where D/sub QL/ is the quasilinear diffusion coefficient, nu is the bulk electron-ion collisional frequency and v/sub t/ = (T/sub B//m/sub e/sup 1/2/ is the bulk electron thermal velocity. The 1-D theory [1] and a previous 2-D numerical investigation showed that the rf current generated (J) is nearly equal in the two theories. The figure of merit J/P/sub d/, where P/sub d/ is the density of power dissipated, was enhanced by a factor of 2.5 in that 2-D study compared with 1-D theory.

29923 **(DOE/ET/51013—119) Realistic modelling of lower hybrid current drive with multiple codes.** Bonoli, P.; Englade, R.; Porkolab, M. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). 27 Mar 1984. Contract AC02-78ET51013. 18p. (PFC/CP—84-6; CONF-840311—10). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010576.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

A computer model for lower hybrid current drive has been developed which combines a radial transport code, a Fokker Planck solver, and a toroidal ray tracing code. The physical mechanism in the model which allows incident lower hybrid wave power at high parallel phase velocity to eventually interact with lower phase velocity electrons and thus form a significant quasilinear plateau, is the toroidal upshift that occurs in the parallel wavenumber. The resulting rf current generation and its dependency on toroidal magnetic field agree well with experiment.

29924 **(DOE/ET/51013—121) Lower hybrid experiments at the 1 MW level on Alcator C; heating and current drive.** Porkolab, M.; Lloyd, B.; Schuss, J.J.; Takase, Y.; Texter, S.; Watterson, R.; Bonoli, P.; Englade, R.; Fiore, C.; Gandy, R. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Apr 1984. Contract AC02-78ET51013. 18p. (PFC/CP—84-7; CONF-840311—11). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010586.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Lower hybrid current drive and heating experiments have been carried out on the Alcator C tokamak at power levels up to 1.15 MW in the density range 1.0 x $10^{13} \leqq$ anti n/sub e/(cm^{-3}) $\leqq$ 1.0 x 10^{14}. By launching waves with 67°, 90° or 112° phasing of adjacent waveguides, maximum flat-top current drive efficiencies of eta = R(m) x n($10^{14}cm^{-3}$)I(MA)/P(MW) = 0.12 at B = 10 tesla, and eta $\simeq$ 0.08 at B = 8 tesla were obtained with molybdenum limiters. With graphite, or silicon-carbide coated graphite limiters the efficiencies were 30 to 40% lower. Current ramping experiments have also been carried out at densities up to anti n $\simeq$ 6 x $10^{13}cm^{-3}$. By phasing the adjacent waveguides at 180°, heating experiments were performed in the density range 8 x $10^{13} \leqq$ anti n(cm^{-3}) $\leqq$ 2 x 10^{14} in both hydrogen and deuterium plasmas. This range of densities corresponds to the electron Landau heating mode. Using molybdenum limiters, typical heating rates of the order of eta/sub H/ = $\delta \Sigma$ n/sub j/T/sub j//P/sub rf/ $\simeq$ 10 eV/kW $10^{13}cm^{-3}$ were obtained, whereas with the SiC coated graphite limiters heating rates up to eta/sub H/ $\simeq$ 22 were achieved. Measurements of soft and hard x-rays indicate the presence of substantial electron tails in both the current drive and the electron heating regimes. A combined transport, ray-tracing and Fokker-Planck code is used to analyze and model both the heating and the current drive results.

29925 **(DOE/NBM—4011697) Energy-level scheme and transition probabilities of Si-like ions.** Huang, K.N. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 144p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84011697.

Portions are illegible in microfiche products.

Theoretical energy levels and transition probabilities are presented for 27 low-lying levels of silicon-like ions from Z = 15 to Z = 106. The multiconfiguration Dirac-Fock technique is used to calculate energy levels and wave functions. The Breit interaction and Lamb shift contributions are calculated perturbatively as corrections to the Dirac-Fock energy. The M1 and E2 transitions between the first nine levels and the E1 transitions between excited and the ground levels are presented.

29926 **(EP-LPMI-RA—1982) 1982 - Annual progress report.** (Ecole Polytechnique, 91 - Palaiseau (France). Lab. de Physique des Milieux Ionises). 1983. 42p. (In French). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750661.

This report briefly presents the activities of the laboratory of ionized medium physics during the year 1982: laser-matter interaction and compression of targets by laser; plasma turbulence; high intensity beams of ions and electrons; negative ions produced in plasma.

29927 **(EUR-CEA-FC—1195) Modeling of the L.F. turbulent spectrum during ohmic discharges, auxiliary heating and disruptions in Tokamak.** Truc, A. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Jul 1983. 50p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750605.

Portions are illegible in microfiche products.

The spectrum of low frequency turbulence in the TFR tokamak, as observed along a central chord by a CO_2 laser light diffusion diagnostic, appears to be representable by four monomial branches joining to three vertices. This schematic representation permits to follow more easily the evolution of the turbulence during the life of the plasma, including the ohmic regime, the transitions to auxiliary heating and the minor and major disruptions.

29928 **(EUR-CEA-FC—1197) Experimental measurements and modelling of the WEGA boundary layer plasma.** El Shaer, M.; Ichtchenko, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Feb 1983. 48p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750606.

The boundary layer of the WEGA Tokamak has been investigated by using specific diagnostics: movable 4 mm microwave interferometer, several types of movable and fixed probes, Katsumata probe, and multigrid electrostatic analyzer. During the RF heating at the lower hybrid frequency, some modifications in the parameters of the boundary layer are observed which are interpreted by the ponderomotive force effects. A comparison between the measured reflection coefficients of the grill waveguides and their predicted values by a coupling theory (not taking into account the real conditions facing the Grill) is presented. A diffusion model was also made to describe this particular region and to fit the experimental results.

29929 **(GA-A—17494) Electron cyclotron heating experiments on Doublet III.** Prater, R.; Ejima, S.; Lin, S.H.; Moeller, C.; Hsu, J.Y.; Matsuda, K.; Stockdale, R. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1984. Contract AT03-84ER51044. 22p. (CONF-840311—6). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010936.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Electron cyclotron heating experiments on the Doublet III tokamak using up to 250 kW of power at 60 GHz have been performed. The power is launched either as a pure ordinary mode from the low field side or as a pure extraordinary mode from the high field side. The ordinary mode power has shown effective heating under suitable operating conditions, with Δ(T/sub e/ + T/sub i/) = 4.8 eV/kW at a density of 2.5 x $10^{19} m^{-3}$, in agreement with ray tracing and transport calculations. The effect of ECH on energy confinement time is small, for ECH power up to double the ohmic power. A small amount of data is available from inside launch experiments, which showed heating at densities above the ordinary mode cutoff density. Experiments with long pulse (500 msec) and high delivered power (1 MW) are planned for the summer.

29930 **(GA-A—17520) Plasma diffusion in an ergotic magnetic limiter.** Yamagishi, T.; Chu, M.S.; Bhadra, D.K.; Hinton, F.L. (GA Technologies, Inc., San Diego, CA (USA)). Apr 1984. Contract AT03-84ER53158. 20p. (CONF-840520—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011178.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Creation of an ergodic volume of magnetic field lines by means of a single external helical magnetic field in toroidal geometry is briefly discussed. The enhanced heat conductivity in the ergodic magnetic limiter has been calculated taking into account the cubic coherent nonlinearity of perturbations including the effect of plasma current within the limit of MHD approximation. Plasma diffusion coefficients have also been evaluated based on the two fluid model. In the quasilinear theory, without the radial electric field, the radial ion flux is found to be small. In the presence of a radial electric field under the ambipolar condition, an enhanced ion diffusion is possible.

29931 (INIS-mf—8921, pp 24) **Two dimensional x-ray spectroscopy in plasma diagnostics.** Fraenkel, B.S. (Hebrew Univ., Jerusalem (Israel). Racah Inst. of Physics). 1983. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780235. (CONF-8303128—Summ.). TI84780235

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

29932 **(IPF—82-6) Ion acceleration in the plasma focus.** Deutsch, R. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Sep 1982. 45p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751331.

Experimental informations are used to estimate the time dependence of the current density in the plasma focus and the electromagnetic field is determined from the Maxwell equations. The acceleration of the ions in these fields is studied. A detailed analysis of the acceleration in the compression phase, in the expansion phase and during the evolution of the m=O instability is made. It is shown, that the appearance of fast selffocused quasineutral electron beams, as a result of the betatron acceleration, has a decisive importance in the ion acceleration during the m=O constriction. Models for electromagnetic ion acceleration are described for each phase. A concordance with many experimental results can be observed.

29933 **(IPF—82-8) Numerical simulation of plasma wave phenomena.** Erz, U.; Raeuchle, E.; Weixelbaum, K. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Jun 1982. 25p. (CONF-820618—17). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751324.

From International conference on plasma physics; Goeteborg, Sweden (7 Jun 1982).

An effective plasma simulation method has been developed and is applied to the investigation of linear and nonlinear electrostatic waves, bounce effects of electrons and ions, sideband instabilities, Langmuir solitons and current driven turbulence.

29934 **(IPF—82-9) Self-organisation phenomena in the plasma focus.** Deutsch, R.; Grauf, W.; Herold, H.; Schmidt, H. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Jun 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751325.

The structure of the final minimum-energy state of the focus plasma was studied, using Taylor's relaxation theory. A superposition of the reversed pinch field and the field of eddies was obtained. Similar structures could be observed experimentally.

29935 **(IPF—82-10) Influence of the deviation from the equilibrium deuteron distribution on the neutron spectra in linear pinch geometries.** Deutsch, R.; Herold, H.; Kaeppeler, H.J.; Schmidt, H. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Jul 1982. 25p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751310.

In order to analyse the influence of the deviation from the equilibrium distribution of the fast deuterons on the neutron spectrum, the limiting case, corresponding to a two-dimensional monoenergetic deuteron distribution, was studied. An essential difference in comparison to the equilibrium case is the appearance of a pronounced peak in the side-on spectra at Esub(n)approx.=2.5 MeV. A comparison of the theoretical and experimental data was made. If we take into account the relaxation processes, there results a good agreement between theory and experiment.

29936 **(IPF—82-14) Plasmadynamics and neutron production of the POSEIDON plasma focus.** Grauf, W. (Stuttgart Univ (Germany, F.R.). Inst. fuer Plasmaforschung). Aug 1982. 92p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751323.

The correlation between plasma dynamics and neutron and X-ray emission has been investigated on the plasma focus POSEIDON for various operational modes (voltage 60 kV and 70 kV; energy 280 kJ and 380 kJ; filling pressure 1 to 12 mbar, deuterium) and for several electrode geometries. Five-frame schlieren pictures of the focus plasma were taken with a schlieren set-up, equipped with 5 nitrogen lasers. The schlieren pictures were time correlated to the neutron and X-ray signals from a plastic scintillator/photomultiplier detector. A good discrimination between neutron and X-radiation was achieved.

29937 **(IPF—82-15) Recent advances in Thomson scattering: high repetition rate Thomson scattering diagnostics on large plasma devices.** Roehr, H.; Steuer, K.H.; Hirsch, K.; Salzmann, H. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Sep 1982. 30p. (CONF-8208177—1). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751332.

From 4. topical conference of the American Physical Society on high temperature plasma diagnostics; Boston, MA, USA ().

In contrast to conventional ruby laser scattering devices allowing only singly pulse measurements, time evolution of Te and ne can be obtained with multipulse lasers. Within a short time interval (proportional 1 ms) rapid variations can be investigated by employing a periodically Q-switched ruby laser. Several scattering systems under construction in different laboratories to register the time evolution of Tsub(e) and nsub(e) during the whole plasma discharge will be reported. The set-up operating successfully on the Garching tokamak ASDEX will be described in detail. This scattering system uses a Nd:YAG laser (1 J/pulse, up to 100 pps, pulse duration 30 ns, burst of max. 400 pulses) and silicon avalanche diodes as detectors. Time resolved nsub(e) and Tsub(e) measurements on different types of ASDEX discharges are shown, e.g. the electron density and electron heating during neutral beam injection in a divertor discharge. As an example of relatively fast changes of nsub(e) and Tsub(e), results on pellet injection are presented. Interferometric and ECE measurements are in good agreement with the Thomson results. Stationary "long pulse discharges" in ASDEX (10 s) at low densitites ($10^{12}cm^{-3}$) were diagnosed with reduced time resolution by averaging over several laser pulses. Measurements of the time evolution of electron temperature and -density profiles were done in a first step with a scanning mirror system. These results enables optimazing out 15 spatial-point Thomson scattering system on ASDEX.

29938 **(IPF—82-16) Proposal for a new Thomson scattering technique for large fusion devices.** Salzmann, H.; Hirsch, K. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Nov 1982. 36p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751333.

The application of 180° scattering using ultrashort laser pulses is proposed. Spatial resolution along the laser beam is achieved by high-speed detection allowing time-of-flight measurements. This LIDAR technique uses a minimum number of window ports, reduces drastically the number of optical components in the vicinity of the discharge vessel and makes remote control unnecessary. As an example the performance of such a system is discussed on the basis of available laser and detection technology for the JET geometry.

29939 **(IPF—82-18) Spectroscopic measurements concerning the energy distribution of ions in the belt pinch device HECTOR.** Mayer, A. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Mar 1982. 53p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751320.

Doppler profiles of the spectral lines Dsub(α) (656,1 nm) and He-II (468,6 nm) have been measured in the deuterium discharge of the belt pinch HECTOR (2% He added) by means of a Fabry-Perot polychromator to determine the behaviour of ion temperature in space and time. Different temperatures of D and He and in addition non-thermal ion velocity distributions are produced during the shock heating phase. The formation of a thermal plasma with ion temperatures in the 100 eV range within 5 μs has been observed.

29940 **(IPF—83-2) Significance of the pinch phase for the neutron production in the plasma focus.** Hayd, A.; Maurer, M.; Meinke, P.; Kaeppeler, H.J. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Mar 1983. 22p. (In German). (CONF-8303140—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751341.

From 47. physicists meeting and spring meeting of DPG on atomic physics, mass spectrometry, molecular physics, high-speed phisics; Regensburg, F.R. Germany (14 Mar 1983).

Solutions of the MPD-equations of two-liquid theory for the compression phase, the pinch phase and the late phase of the plasma focus with pinch currents $>$ 500 kA also yield neutron production in the pinch phase between maximum compression and the beginning of the m = 0 instability. This has been observed experimentally at the Stuttgart plasma focus POSEIDON. The appearance of quasisolitons, the filamentation of the electric current, the neutron production and the lifetime of the pinch phase are discussed in their relation to the reactor relevance of the plasma focus.

29941 **(IPF—83-3) Basic equations for a four-component theory of turbulent magneto-plasmadynamics.** Kaeppeler, H.J. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Apr 1983. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751344.

In the case of strong electric fields and high currents in magneto-plasmas, it is necessary to use four components in order to consider the acceleration of ions and electrons and the consecutive effects in detail. As the time scales for the microscopic and macroscopic phenomena differ by several orders of magnitude, micro-effects were treated analytically, while macroscopic flows are solved by Reduce/Fortran hybrid code. Microturbulence is considered in a quasi-linear approximation, while the hybrid code permits complete non-linear approach via a macroscopic dispersion relation. The basic equations necessary for this four-component theory are compiled in this report.

29942 **(IPP—1/213) Pellet-induced charge exchange effects in ohmically heated and NB heated tokamak plasmas.** Lengyel, L. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Mar 1983. 25p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751311.

Pellet injection has become a frequently used method of replacing particle losses in divertor tokamaks and of depositing particles at depths not accessible to gas puffing. Pellets can also be used as markers for diagnostic purposes, or for building-up high-density target plasmas for neutral beam injection. It was decided to perform calculations for experimental plasma conditions by applying a transport code that incorporates Monte Carlo simulation of the neutral particle transport (1D PPPL transport code BALDUR). The primary objectives of these calculations were to obtain information on the effect of cx collisions on the pellet particle deposition profile and the plasma parameter distributions, and to obtain information on the magnitudes of the resulting particle and energy losses both in ohmically and NB-injection-heated plasmas.

29943 **(IPP—1/215) Some considerations concerning fusion alpha particle diagnostics.** Schumacher, U.; Springmann, E. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Apr 1983. 39p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751316.

The conditions necessary for neutral doping beams suitable for diagnosing the alpha particles in high-temperature or burning D-T fusion plasmas are investigated for the example of JET extended performance plasma paramaters. It turns out that step processes have to be taken into account for the beam attenuation calculations. The necessary neutral doping beam current densities have to be beyond about 200 mA/cm² for sufficient photon density rates and neutral ⁴Hesup(o) rates, respectively, and the neutral particle energy should be above about 200 keV/amu.

29944 **(IPP—1/216) Modelling of the impurity flow in the tokamak scrape-off layer.** Neuhauser, J.; Schneider, W.; Wunderlich, R.; Lackner, K. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Apr 1983. 36p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751314.

The impurity flow parallel to the magnetic field lines in a collisional tokamak scrape-off layer is numerically investigated. The rate equations are solved treating each ionization state as a testfluid, which interacts with the given hydrogen background plasma via collisions and the ambipolar electric field. Collisional friction usually forces the impurities to flow nearly at hydrogen speed. Thermal forces, however, can become dominant locally for small Mach number and large temperature gradient (e.g. strong divertor recycling), causing in the divertor case impurity accumulation especially near the divertor throat. In addition self-sputtering at the target plates is calculated, showing the importance of frictional impurity acceleration in addition to the charge state dependent electrostatic energy gain.

29945 **(IPP—2/264) Calculation of the energy deposition of electron cyclotron waves in a stellarator plasma.** Zhang, Z.X. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Nov 1982. 22p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751313.

Based on a three-dimensional ray-tracing code, the energy deposition profiles of the electron cyclotron O-mode and X-mode at the first harmonic are calculated. The finite antenna aperture is taken into account. The energy deposition profiles are given in one dimensional form, which is related to the magnetic surfaces and can be used in transport code. The effects of the antenna aperture, the oblique angle of the axis of the antenna to the meridian plane or to the equatorial plane and the plasma parameters to the energy deposition are studied.

29946 **(IPP—4/210) Ray tracing of ion cyclotron waves in tokamak plasmas.** Brambilla, M. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Mar 1983. 45p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751315.

With the present report we begin the presentation of a numerical code, RAYIC, which has been developed with the purpose of applying ray tracing methods to the study of ion cyclotron heating of large tokamak plasmas. This report discusses the theory and displays the equations used by the code. In addition to a presentation of the Eikonal approximation and its use for the description of waves in axisymmetric plasmas of arbitrary meridian cross-section shape, the report contains a summary of a simplified antenna model, and of a treatment of the singular layers (two-ion hybrid and/or cyclotron resonances) where most of the absorption is expected.

29947 **(IPP—4/212) Two-ion hybrid resonances and ion cyclotron absorption in tokamak plasmas.** Brambilla, M.; Ottaviani, M. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Nov 1983. 38p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751300.

The behaviour of IC waves near resonances in tokamak geometry is investigated in details. For this purpose, a one-dimensional model is proposed, which takes into account the orientation of the incident wavefronts with respect both to the singular layer and to the magnetic surfaces. The differential equations describing the waves are derived again from Vlasov-Maxwell equations in the finite Larmor radius approximation; they are shown to conserve the wave power flux in the absence of dissipation, and to reproduce the local dispersion relation in the WKB limit. These equations are solved exactly in some important situations, and with the Green-function technique in the general case. The amount of power coupled to Bernstein waves and absorbed by cyclotron damping is explicitly evaluated.

29948 **(IPP—6/230) Axisymmetric MHD equilibria with flow.** Kerner, W.; Jandl, O. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Aug 1983. 48p. (IPP—1/220). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751302.

Axisymmetric, ideal MHD configurations with steady flow are computed by applying the finite element method. Rectangular elements with four to eight nodes are used. By mesh rearrangement the equilibria are obtained in flux coordinates. Accurate results without flow and with purely toroidal flow are presented.

29949 **(IPP—III/82) Charge-exchange cell for the neutral lithium beam probe on pulsator, W7a and ASDEX.** McCormick, K. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Mar 1983. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751312.

The charge-exchange cell forming a part of the lithium-diagnostic beam-line on Pulsator, Wendelstein 7a and ASDEX is described. The cell consists of a neutralization tube of 12 cm length attached to a reservoir which supplied the neutralizing medium, either lithium or sodium. To reduce cell losses, operation is on a pulsed basis by means of a valve which seals the reservoir during periods when the beam is not on. Using sodium, neutralization efficiencies for a Li^+ beam vary typically from C.97% at 20 keV to 57% at 100 keV.

29950 **(IPP—III/86) Confinement and βsub(p)-studies in neutral injection heated ASDEX plasmas.** Wagner, F.; Becker, G.; Behringer, K.; Campbell, D.; Eberhagen, A.; Engelhardt, W.; Fussmann, G.; Gehre, O.; Gernhardt, J.; Gierke, G. von. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Mar 1983. 68p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751317.

Neutral injection experiments into limiter and divertor discharges in ASDEX are described with hydrogen and deuterium as working gas. Two operational regimes have been observed in neutral injection heated divertor discharges. One regime is characterized by deteriorated energy and particle confinement. The global energy confinement times are comparable to those of neutral injection heated limited discharges. Tthe other regime has particle and energy confinement times comparable to those of ohmic discharges with tausub(E) = 40 - 60 msec at beam powers up to 3.1 MW. This regime is further characterized by high βsub(p)-values comparable to the aspect ratio A (βsub(p) proportional 0.65 A), by good electron heating (etasub(e) proportional 2.5 x 10^{13} eV cm^{-3} kW^{-1}) and ion heating (etasub(i) proportional 4.2 x 10^{13} eV cm^{-3} kW^{-1}). In both regimes, tausub(E) increases with plasma current but there is hardly any variation with density. The differences in confinement and scaling to ohmic discharges seem to be caused by modifications of the electron loss channel. The high βsub(p)-regime develops at an injection power >=1.8 MW, anti nsub(e) >= 3 x 10^{13} cm^{-3} and q >= 2.45, and is so far only observed in divertor discharges. There are indications that this may be due to the broad profiles with high edge temperatures which can develop in divertor discharges. An indication of broad current density profiles is given by the lack of sawtooth activity in these discharges.

29951 **(IPP—III/94) Q profile as determined by ECE.** Kissel, S. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Oct 1983. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751301.

The current density distribution, and hence the q profile, remains an important unmeasured function of plasma radius. Only the total plasma current, and, in the case of sawtoothing discharges, the

approximate axial current density are known. By using standard models of plasma resistivity, a current density profile can be determined by the measured electron temperature profile. A technique whereby the ECE data is used in this manner is described, together with the necessary assumptions required. Results are presented together with suggestions and warnings regarding their interpretation.

29952 **(Juel—1830) Drift wave transport and origin of the disruption phenomenon.** Hasselberg, G.; Rogister, A. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik; Association Euratom-Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)). Feb 1983. 48p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751340.

Nonlinear ion Landau damping of drift waves yields a splitting of the spectrum into a long and a short wavelength branch. The latter contributes most (> 90%) of the transport and permits to explain the observed relaxation of Tokamak plasma profiles to a weakly unstable state, in the occurence with regard to the dissipative trapped electron mode. The fluxes indeed increase much more rapidly than the linear growth rates. This result and surprising coincidences between the linear theory and empirical laws concerning the high density limit lead us to propose that the slow rise of the sawtooth pulsations of the core occurs whilst the transport in the surrounding layer is insufficient to evacuate the power deposited. The sudden relaxation takes place once the released heat pulses are capable - much as in collisionless shock waves - of exciting the trapped electron mode to a sufficient level to ensure adequate transport. The model explains many experimental features associated with these sawteeth as well as with the related plasma disruptions: contraction of the current channel, high density limit (both the scaling and the order of magnitude are predicted), etc. ...

29953 **(LA—10042-MS) Plasma energy deposition from the nuclear elastic scattering of tritons on tritons.** Devaney, J.J. (Los Alamos National Lab., NM (USA)). Mar 1984. Contract W-7405-ENG-36. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010995.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The rate of energy loss in a triton plasma suffered by tritons from nuclear forces elastic scattering plus nuclear Coulomb interference is calculated up to 3.5-MeV triton energy.

29954 **(LA-UR—84-1249) Diagnostics of a high current capillary discharge.** Kania, D.R.; Jones, L.A. (Los Alamos National Lab., NM (USA)). 29 Mar 1984. Contract W-7405-ENG-36. 6p. (CONF-8403100—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011369.

From Conference of Z-pinches for fusion; Alexandria, VA, USA (29 Mar 1984).

Portions are illegible in microfiche products.

We have demonstrated that thin (10 to 25 μm diameter) capillaries can be fabricated in suitably configured insulators for use in pulse power machines. Large currents can be used to heat these capillaries which produce photons with an energies greater than 1 keV.

29955 **(PPPL—2097) Finite Larmor radius modification of the Mercier criterion.** Connor, J.W.; Tang, W.M.; Allen, L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84010934.

The finite Larmor radius modification of the Suydam criterion involves a competition between stabilizing finite Larmor radius effects and destabilizing curvature. In the case of the toroidal calculation, corresponding to the Mercier criterion, ballooning effects from regions of unfavorable curvature must be taken into account. In the case of a model equilibrium, valid near the magnetic axis, a complete solution is obtained. Results indicate that the amount of finite Larmor radius stabilization needed to overcome the effects of unfavorable average curvature increases as a function of the toroidal ballooning parameter.

29956 **(SAI—84-3032) Azimuthal electric fields and tandem ambipolarity.** Catto, P.J.; Myra, J.R.; Lee, X.S.; Francis, G.L. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Apr 1984. Contract AC03-76ET53057. 11p. (PRI—76). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010843.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The importance of retaining the azimuthal variation of the electrostatic potential in transport and ambipolarity studies is demonstrated. Because the azimuthal electric field must satisfy quasi-neutrality, equilibrium ambipolar operation permitting different ambipolar roots at different radii is energetically not possible. Moreover, in the tandem mirror model considered herein, the only acceptable ambipolar root is not accessible for significantly inverted source profiles and does not permit the density profile to invert radially.

29957 **(UCRL—90096) ICRF heating in the Tandem Mirror Experiment-Upgrade (TMX-U).** Molvik, A.W.; Cummins, W.F.; Falabella, S.; Poulsen, P.; Barter, J.; Dimonte, G.; Romesser, T.; Mett, R. (Lawrence Livermore National Lab., CA (USA); TRW, Inc., Redondo Beach, CA (USA); California Univ., Berkeley (USA)). Mar 1984. Contract W-7405-ENG-48. 13p. (CONF-840311—12). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010555.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Portions are illegible in microfiche products.

Central cell plasma in Tandem Mirror Experiment-Upgrade (TMX-U) are heated with 100 kW of ICRF transmitter power to ion temperatures of 1.5 keV at densities of 2 x 10^{12} cm^{-3}. We have used two Faraday-shielded antennas: the first had one 90° loop; and the second, in current use, has two 170° loops connected in an m = 1 configuration. We are also installing a slot antenna. Optimum heating for wave launching occus below the cyclotron frequency, consistent with slow wave heating. In TMX-U, we observed a power threshold, which is consistent with computed end-loss power balance. The measured loading resistance varies with density and frequency in agreement with McVey's antenna-plasma coupling code.

29958 **Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range.** Skiff, F.; Ono, M.; Wong, K.L. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* **27**: No. 5, 1051-1054(May 1984). Contract AC02-76CH03073.

Parametric excitation of ion Bernstein waves is observed with an ICRF fast wave induction loop antenna in the ion cyclotron frequency range ($\omega_0 \sim 2\Omega$/sub i/-4Ω/sub i/). Important features of the decay process are investigated and discussed.

29959 **Interpretation of end-on interferometry in field-reversed configurations.** Tuszewski, M.; McKenna, K.F. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physics of Fluids;* **27**: No. 5, 1058-1060(May 1984).

For field-reversed configurations formed from a 20 mTorr static gas filling in the FRX-C device, the density in the end regions is determined by side-on interferometry. This allows us to understand the radial profiles obtained from end-on holograms, and provides a more accurate estimate of the FRC particle confinement time than previously obtained.

29960 **Variational structure of the Vlasov equation in multidimensional systems.** Dominguez, R.R.; Berk, H.L. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* **27**: No. 5, 1142-1147(May 1984). Contract AT03-76ET51011.

A self-adjoint structure for the Maxwell integral equations, derived for distributions satisfying the Vlasov equation, is demonstrated for a class of plasma equilibria with one ignorable coordinate. It is shown that a general type of self-adjointness is manifest for a class of systems for which there is no magnetic field compo-

nent in the ignorable direction. The integral kernel also is shown to have a natural differential operator representation.

29961 **Reduced equations for nonlinear three-dimensional plasma evolution.** Chu, M.S.; Jensen, T.H. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* 27: No. 5, 1194-1197(May 1984). Contract AT03-76ET51011.

It is useful to cast the plasma evolution equations for a general three-dimensional configuration in terms of a set of new gauge functions based on the magnetic field. A set of reduced equations may be arrived at in this gauge by making the simple assumption that the compressional motion is decoupled from the shear motion. The equations first proposed by Strauss can be shown as the special case when the perpendicular perturbation wavelength is much shorter than the equilibrium length scale.

29962 **Numerical solution of the resistive magnetohydrodynamic boundary layer equations.** Glasser, A.H.; Jardin, S.C.; Tesauro, G. (Physics Department, Auburn University, Auburn, Alabama 36849). *Physics of Fluids;* 27: No. 5, 1225-1242(May 1984). Contract AC02-76CH03073.

Three different techniques are presented for numerical solution of the equations governing the boundary layer of resistive magnetohydrodynamic tearing and interchange instabilities in toroidal geometry. Good agreement among these methods and with analytical results provides confidence in the correctness of the results. Solutions obtained in regimes where analytical methods fail indicate a new scaling for the tearing mode as well as the existence of a new regime of stability.

29963 **Neoclassical dielectric property of a tokamak plasma.** Hinton, F.L.; Robertson, J.A. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* 27: No. 5, 1243-1247(May 1984). Contract AT03-76ET51011.

The response of a tokamak plasma to a time-dependent axisymmetric radial electric field is considered. The bounce-averaged motion of magnetically trapped ions is shown to consist of a radial drift, in addition to the well-known toroidal precession. This is a neoclassical polarization drift, which is larger than the standard one by a factor B²/B²/sub theta/, the square of the ratio of total to poloidal magnetic fields. The resulting low-frequency dielectric constant is larger than the standard one by approximately the same factor, when the ions are in the banana regime of neoclassical theory.

29964 **Heliac parameter study.** Monticello, D.A.; Dewar, R.L.; Furth, H.P.; Reiman, A. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* 27: No. 5, 1248-1252(May 1984). Contract AC02-76CH03073.

Helical axis stellarators (heliacs) with zero net current are found to possess very good stability properties. Helically symmetric or "straight" heliacs with bean-shaped cross sections have a first region of stability that reaches to $< \beta >$ of 30% or more. Those with circular cross sections have a second region of stability to Mercier modes. In addition, the stability properties of these plasma configurations as functions of pressure profile, helical aspect ratio, and helical period length are also reported.

29965 **Electron conductivity model for dense plasmas.** Lee, Y.T.; More, R.M. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physics of Fluids;* 27: No. 5, 1273-1286(May 1984). Contract W-7405-ENG-48.

An electron conductivity model for dense plasmas is described which gives a consistent and complete set of transport coefficients including not only electrical conductivity and thermal conductivity, but also thermoelectric power, and Hall, Nernst, Ettinghausen, and Leduc—Righi coefficients. The model is useful for simulating plasma experiments with strong magnetic fields. The coefficients apply over a wide range of plasma temperature and density and are expressed in a computationally simple form. Different formulas are used for the electron relaxation time in plasma, liquid, and solid phases. Comparisons with recent calculations and available experimental measurement show the model gives results which are sufficiently accurate for many practical applications.

29966 **Dependence of the drift cyclotron loss cone instability on the radial density gradient.** Ferron, J.R.; Wong, A.Y. (Department of Physics, University of California, Los Angeles, California 90024). *Physics of Fluids;* 27: No. 5, 1287-1300(May 1984). Contract AT03-76ET53019.

Large-amplitude fluctuations (ephi/sub rms//kT/sub e/< or ≈2) observed near the ion cyclotron frequency and its harmonics in a magnetic mirror are identified as the drift-cyclotron loss-cone (DCLC) instability through measurements of the frequency, wavenumber, propagation direction, and dependence on the loss cone ion velocity distribution and the radial density gradient. The mode amplitude is reduced when the plasma density and radial density gradient length are near the linear stability boundary, dropping by two orders of magnitude when the density gradient scale length is increased from 2 to 100 ion gyroradii. The mode is localized radially to a region of one ion gyrodiameter width near the location of the steepest density gradient. The bursting appearance of mode amplitude is accompanied by changes in its perpendicular wavelength as the plasma parameters change with time during its decay. Mode amplitude modulation which occurs simultaneously throughout certain flux volumes indicates that the fluctuations arise from an absolute instability. While oscillations at the fundamental of the ion-cyclotron frequency occur most frequently with the largest amplitude, a dominant mode is observed near the third harmonic of the ion cyclotron frequency localized at a steep gradient near the axis. One possible interpretation is that the wavelengths of lower harmonic DCLC modes are too long to satisfy the azimuthal quantization condition.

29967 **Excitation of internal kink modes by trapped energetic beam ions.** Chen, L.; White, R.B.; Rosenbluth, M.N. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* 52: No. 13, 1122-1125(26 Mar 1984). Contract AC02-76CH03073.

Energetic trapped particles are shown to have a destabilizing effect on the internal kink mode in tokamaks. The growth rate is near the ideal magnetohydrodynamic value, but the frequency is comparable to the trapped-particle precession frequency. A model for the instability cycle gives stability properties, associated particle losses, and neutron emissivity consistent with the "fishbone" events observed in poloidal divertor experiments.

29968 **Formation of a 100-kA tokamak discharge in the Princeton Large Torus by lower hybrid waves.** Jobes, F.; Stevens, J.; Bell, R.; Bernabei, S.; Cavallo, A.; Chu, T.K.; Cohen, S.; Denne, B.; Efthimion, P.; Hinnov, E. (Princeton Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* 52: No. 12, 1005-1008(19 Mar 1984). Contract AC02-76CH03073.

The development of noninductive current drive is of great importance in establishing the tokamak as a long-pulse or steady-state fusion reactor. Lower hybrid waves, carrying 200 kW of power at 800 MHz, have been launched into the Princeton Large Torus tokamak to initiate and drive the discharge current to a level in excess of 100 kA.

29969 **Nature of the beam-density effect on energy loss by nonrelativistic charged-particle beams.** Rule, D.W.; Crawford, O.H. (Naval Surface Weapons Center, White Oak, Silver Spring, Maryland 20910). *Physical Review Letters;* 52: No. 11, 934-937(12 Mar 1984). Contract W-7405-ENG-26.

The authors present a new formulation of the beam-density effect on energy loss by charged particles passing through matter, which exhibits an increased loss with a beam-shape dependence. This arises from a long-range dipolelike term contained in the two-particle vicinage function for cooperative energy loss by a pair of nonrelativistic particles. A new analytic expression for the vicinage function, which exhibits the long-range term, is also presented.

29970 **Observation of Rayleigh-Taylor-like structures in a laser-accelerated foil.** Whitlock, R.R.; Emery, M.H.; Stamper, J.A.; McLean, E.A.; Obenschain, S.P.; Peckerar, A.M.C. (Naval Research Laboratory, Washington, DC 20375). *Physical Review Letters;* 52: No. 10, 819-822(5 Mar 1984).

The development of the Rayleigh-Taylor hydrodynamic instability was studied in laser-accelerated targets by introduction of mass thickness variations in foil targets. Observations made by side-on flash x radiography showed target structures and mass redistribution effects which resemble Rayleigh-Taylor bubbles and spikes, including not only advanced broadening of the spike tips on the laser-irradiated side of the foil but also projections of mass on the unirradiated side. The observations compare well with numerical simulations.

29971 **Rotational suppression of Pfirsch-Schlueter ion thermal conductivity for a plasma.** Wong, S.K.; Hinton, F.L. (GA Technologies Incorporated, San Diego, California 92138). *Physical Review Letters;* **52**: No. 10, 827-830(5 Mar 1984). Contract AT03-76ET51011.

Ion thermal conductivity for a tokamak plasma in the collisional regime with arbitrarily large toroidal rotation is calculated from Braginskii's equations. It is found to decrease to the classical value as $\nu/\sub\ i/\bar{i}^{-1}$ for high enough collisionality.

29972 **Conductivity and transport in neon deuterium discharges in the PLT tokamak.** Meservey, E.; Bitter, M.; Daughney, C. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **24**: No. 1, 3-12(Jan 1984).

Paper copy only, copy does not permit microfiche production3 refs.

Introduction of large amounts of neon into Ohmically heated deuterium discharges in the PLT tokamak results in higher central electron temperature (Tsub(e)(0)approx.=3 keV) and values of electron energy containment time that are larger than in regular discharges at the same electron density (tausub(Ee)=44 ms at n-barsub(e)=2×10^{19} m^{-3}). For steady-state discharges with high effective Z (approx.5-8) the conductance is larger than that predicted by neoclassical theory by as much as a factor of two. Transport rates of hydrogen-like and helium-like ions can be fairly well approximated by assuming a diffusion constant of between 0.4 and 1 $m^2.s^{-1}$. Within experimental uncertainties the diffusion of hydrogen-like neon is the same for co- and counter-directed high-power neutral beams.

29973 **Excitation of upper-hybrid waves by a thermal parametric instability.** Lee, M.C. (Regis Coll. Research Center, Weston, MA (USA)); Kuo, S.P. (Polytechnic Inst. of New York, Farmingdale (USA)). *Journal of Plasma Physics;* **30**: 463-478(Dec 1983).

A purely growing instability characterized by a four-wave interaction is analysed in a uniform, magnetized plasma. Up-shifted and down-shifted upper-hybrid waves and a non-oscillatory mode can be excited by a pump wave of ordinary rather than extraordinary polarization in the case of ionospheric heating. The differential Ohmic heating force dominates over the ponderomotive force as the wave-wave coupling mechanism. The beating current at zero frequency produces a significant stabilizing effect on the excitation of short-scale modes by counterbalancing the destabilizing effect of the differential Ohmic heating. The effect of ionospheric inhomogeneity is estimated, showing a tendency to raise the thresholds of the instability. When applied to ionospheric heating experiments, the present theory can explain the excitation of field-aligned plasma lines and ionospheric irregularities with a continuous spectrum ranging from metre-scale to hundreds of metre-scale. Further, the proposed mechanism may become a competitive process to the parametric decay instability and be responsible for the overshoot phenomena of the plasma line enhancement at Arecibo.

29974 **RF-assisted current startup in the fusion engineering device.** Borowski, S.K.; Kammash, T.; Peng, Y.K.M. (University of Michigan Ann Arbor, MI 48105). *Transactions of the American Nuclear Society;* **45**: 172(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

29975 **High resolution, high rate x-ray spectrometer.** Goulding, F.S.; Landis, D.A. (to Dept. of Energy). US Patent Application 6-513,557. 14 Jul 1983. 22p. Contract AC03-76SF00098.

It is an object of the invention to provide a pulse processing system for use with detected signals of a wide dynamic range which is capable of very high counting rates, with high throughput, with excellent energy resolution and a high signal-to-noise ratio. It is a further object to provide a pulse processing system wherein the fast channel resolving time is quite short and substantially independent of the energy of the detected signals. Another object is to provide a pulse processing system having a pile-up rejector circuit which will allow the maximum number of non-interfering pulses to be passed to the output. It is also an object of the invention to provide new methods for generating substantially symmetrically triangular pulses for use in both the main and fast channels of a pulse processing system.

29976 **Space-time energy concentration and the design of DT fusion micro-explosions.** Sahlin, H.; Brandenburg, J.E. (Lawrence Livermore Laboratory, Univ. of California, Livermore, CA 94550). pp 729-744 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter explores many target concepts and carries out extensive implosion calculations as part of an effort to employ a plasma focus as a driver for fusion micro-explosions. Presents some of the basic principles of micro-explosion design. Considers designs appropriate to 10^{14}, 10^{13} and 10^{12} watts/cm^2. Briefly examines the possibilities of targets requiring power densities less than 10^{12} watts/cm^2 and greater than 10^{15} watts/cm^2. The purpose of this work is to understand the space-time energy consideration of the plasma focus, through theoretical and numerical studies, and to apply this knowledge to the production of electron, ion, infrared and microwave bursts in this device. Focuses on the determination of the power per unit area of the electron and ion bursts, the mechanism of electron burst deposition in high Z materials, and on the potential application of the electron burst and its energy deposition as a driver for fusion micro-explosions. The enhancement of the ion bursts and measurement of the infrared and microwave production is left for future work.

29977 **Recent development in high energy plasma production techniques by the deflagration plasma gun.** Cheng, D.Y.; Chang, C.N.; Tripathi, P.P. (Plasma Research Laboratory, Univ. of Santa Clara, Santa Clara, CA 95053). pp 807-829 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract FG03-84CE50036.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter reports experimental data and experience which establish the phenomenon of deflagration in plasma as unique and with quite different properties from the normal snowplow modes. Demonstrates that extremely high velocities and energies in plasma beams are possible with obvious applications in many field and, in particular, in fusion. Suggests that the potential of deflagration beams' scalability to very high energy quasi-neutral plasma beam is possible with present day technology. Discusses plasma deflagration in a T-tube; coaxial deflagration plasma guns; a typical deflagration gun and its operating procedures; electrical design considerations; kinetic theory point of view of the deflagration acceleration of particles; measurements and results; properties of the deflagration gun; applications; inertial confinement experiments; injection into magnetic confinement systems; interaction experiments; and highly energetic beams.

29978 **Energy coupling in the plasma focus.** Wainwright, T.E.; Pickles, W.L.; Price, D.F.; Sahlin, H.L. (Lawrence Livermore Laboratory, Univ. of California, Livermore, CA 94550). pp 317-323 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter reports on experiments performed with a 125-kJ plasma focus to investigate mechanisms for rapid coupling of inductively-stored energy into plasmas. Explains that the coupling can take place through the formation of an electron or ion beam that deposits its energy in a target or directly by the penetration of the magnetic field into a resistive plasma. The experiments use a replaceable conical anode tip that is intended to guide the focus to within a few millimeters of the axis, where it can suddenly deliver energy either to a small target or to particles that are accelerated. X-ray and fast-ion diagnostics are used to study the effects.

29979 **Plasma focus experiments with DT-filled microballoons.** Sahlin, H.L.; Gullickson, R.L.; Hasegawa, T.H.; Luce, J.S.; McClure, J.W.; Pickles, W.L.; Price, D.F.; Wainwright, T.E. (Lawrence Livermore Laboratory, Univ. of California, Livermore, CA 94550). pp 325-328 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter describes experiments with DT-filled glass microballoons positioned near the pinch region of a plasma focus which resulted in the production of neutrons which do not appear to be due to D-T reactions. Subsequent to this series of experiments it was found that occasionally neutrons were produced in the H_2-filled plasma focus even in the absence of a DT microballoon.

29980 **Two-dimensional magnetohydrodynamic calculations for a 5 MJ plasma focus.** Maxon, S. (Lawrence Livermore Laboratory, Univ. of California, Livermore, CA 94550). pp 387-406 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This article describes the calculation of the performance of a 5 MJ plasma focus using a two-dimensional magnetohydrodynamic (2-D MHD) code. Discusses two configurations, a solid and a hollow anode. Finds an instability in the current sheath of the hollow anode which has the characteristics of the short wave length sausage instability. As the current sheath reaches the axis, the numerical solution is seen to break down. When the numerical solution breaks down, the code shows a splitting of the current sheath (from the axis to the anode) and the loss of a large amount of magnetic energy. Current-sheath stagnation is observed in the hollow anode configuration.

29981 **Ion beam production in the plasma focus device.** Guillickson, R.L.; Pickles, W.L.; Price, D.F.; Sahlin, W.H.; Wainwright, T.E. (Lawrence Livermore Laboratory, Univ. of California, Livermore, CA 94550). pp 579-596 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—). Contract W-7405-ENG-48.

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter reports on the extension of previous studies of ion acceleration in the plasma focus device by measuring the spectrum of high energy deuterons using nuclear activation techniques. The Mather geometry plasma focus device was operated at 27 kV for a stored energy of 122 kJ. Reviews the Livermore results and compares them with recent measurements of high energy ions in the plasma focus device at other laboratories. Discusses diagnostic techniques for measuring high energy ions, including nuclear activation, particle track detectors, solid state (silicon PIN) detectors, and neutron time-of-flight measurements. Finds that ion acceleration depends strongly on pressure, and was greatest at 2 Torr, a pressure lower than that for maximum neutron production.

29982 **General principles of magnetic confinement.** Hogan, J.T. (Oak Ridge National Lab. P.O. Box Y Oak Ridge, TN). pp 35-69 of Atomic and molecular physics of controlled thermonuclear fusion. Joachain, C.J.; Post, D.E. New York, NY; Plenum Publishing Corp. (1983). (CONF-820731—).

From North Atlantic Treaty Organization Advanced Study Institute conference on atomic and molecular processes in controlled thermonuclear research; Palermo, Italy (19 Jul 1982).

This chapter examines basic magnetic confinement issues such as single particle confinement, finite pressure equilibrium and stability, and transport. Describes the major approaches to magnetic confinement; tandem (ambipolar) mirrors with their associated auxiliary barriers, tokamaks and stellarators; and EBT and Reversed Field Pinch as the leading alternatives. Discusses the evolution equations for particle, energy and, where relevant, field diffusion. Offers a case study of H /SUP o/ charge exchange with multiply charged ions. Presents a tandem mirror configuration with neutral injection to sustain the end cell density, solenoid and yin-yang coils. Points out that equilibrium and stability considerations provide the bases for transport timescale analysis.

29983 **Neutral particle beam production and injection.** Post, D.; Pyle, R. (Princeton Plasma Physics Lab. Univ. of California). pp 477-518 of Atomic and molecular physics of controlled thermonuclear fusion. Joachain, C.J.; Post, D.E. New York, NY; Plenum Publishing Corp. (1983). (CONF-820731—). Contract AC03-76SF00098.

From North Atlantic Treaty Organization Advanced Study Institute conference on atomic and molecular processes in controlled thermonuclear research; Palermo, Italy (19 Jul 1982).

This chapter shows the ways that atomic physics enters into the design, diagnosis, and application of neutral beam systems. Examines the interactions of neutral beams with confined plasmas, and the production and diagnosis of the neutral beams. Focuses on atoms, molecules, and ions of the isotopes of hydrogen, but mentions some heavier elements (e.g. oxygen). Emphasizes single-particle collisions and includes selected atomic processes on surfaces. Discusses neutral beam penetration and fast ion orbits; fast ion slowing down and plasma heating; charge exchange recombination; current drive and energy beams; neutral beam systems; positive-ion systems; negative-ion systems; efficiencies; ion sources; volume atomic processes; surface atomic processes; a source model; magnetic filters; accelerators; neutralizers; cross sections; neutral fractions; the region between neutralizer and plasma; negative-ion generators; dopplershifted light; and special topics (e.g. polarized neutral beams).

29984 **Particle diagnostics for magnetic fusion experiments.** Post, D.E. (Plasma Physics Lab. Princeton Univ. Princeton, NJ). pp 539-559 of Atomic and molecular physics of controlled thermonuclear fusion. Joachain, C.J.; Post, D.E. New York, NY; Plenum Publishing Corp. (1983). (CONF-820731—). Contract AC02-76CH03073.

From North Atlantic Treaty Organization Advanced Study Institute conference on atomic and molecular processes in controlled thermonuclear research; Palermo, Italy (19 Jul 1982).

This chapter summarizes the subset of diagnostics that relies primarily on the use of particles, and attempts to show how atomic and molecular data play a role in these diagnostics. Discusses passive charge-exchange ion temperature measurements; hydrogen beams for density, ion temperature, q and ZEFF measurements; impurity diagnostics using charge-exchange recombination; plasma electric and magnetic measurements using beams heavier than hydrogen; and alpha particle diagnostics. Points out that as fusion experiments become larger and hotter, most traditional particle diagnostics become difficult because large plasmas are difficult for neutral atoms to penetrate and the gyro-orbits of charged particles need to be larger than typically obtained with present beams to be comparable with the plasma size. Concludes that not only does the current profile affect the plasma stability, but there is a growing opinion that any serious fusion reactor will have to be steady state.

29985 **(ANL/FPP/TM—182) New one-phase dual converter for superconducting inductive energy storage and transfer applications: the one-phase inductor-converter bridge.** Ehsani, M.; Kustom, R.L. (Argonne National Lab., IL (USA)). Mar 1984. Contract W-31-109-ENG-38. 60p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84012118.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report presents the results of theoretical and experimental development of the one-phase Inductor-Converter Bridge (ICB). The basic operating principles of the circuit are described followed by a theoretical treatment of the dynamics and control of the system. The successful results of the first experimental operation and control of the one-phase ICB are presented and explained. Finally, a discussion of some of the interesting transient and steady state behavior of the circuit, along with some of its unique features, is given.

29986 **(CEA-CONF—6923) Target fabrication and development in the Centre d'Etudes de Limeil.** Clement, X.; Coudeville, A.; Eyharts, P.; Perrine, J.P.; Rouillard, R. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Oct 1983. 33p. (CONF-8309103—11). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84750612.

From 9. international vacuum congress and 5. international conference on solid surfaces; Madrid, Spain (26 Sep 1983).

The present state of research in Limeil laboratory for the production of inertial confinement fusion targets is described in this communication. A summary of typical areas, previously investigated, including new developments, is as follows: - production of hollow glass microspheres, having wide outside diameter range and aspect-ratio, using dried-alcogels, - preparation and fabrication of low density foams having plane or hemispherical shape, - deposition of a wide range of conductive materials as well as silicon and organic polymers, - development of laser and spark erosion machining which are useful tools for producing minute parts of complex targets, - characterization and analysis of plastic or coal metal coated targets, are done by using interferometry techniques and X-ray image analysis as well as X-ray absorption measurements.

29987 **(CONF-8404137—1) Tritium breeding materials.** Hollenberg, G.W.; Johnson, C.E.; Abdou, M. (Westinghouse Hanford Co., Richland, WA (USA); Argonne National Lab., IL (USA); California Univ., Los Angeles (USA)). Mar 1984. Contract W-31-109-ENG-38. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010521.

From American Society for Metals conference on materials for fusion energy systems; Washington, DC, USA (29 Apr 1984).

Portions are illegible in microfiche products.

Tritium breeding materials are essential to the operation of D-T fusion facilities. Both of the present options - solid ceramic breeding materials and liquid metal materials are reviewed with emphasis not only on their attractive features but also on critical materials issues which must be resolved.

29988 **(DOE/DP/40124—22) New model of Raman spectra in laser produced plasma.** Simon, A.; Short, R.W. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 3 Jul 1984. Contract AC08-80DP40124. 5p. (CONF-840616—14). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009625.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Experimental observations of Raman scttering in laser produced plasma can be explained by ordinary incoherent Thompson scattering, with a greatly enhanced plasma line. Transient local reversed-slope velocity distributions in the underdense region can be produced by pulses of hot electrons arising from the two-plasmon or absolute stimulated Raman instabilities (SRS-A) occurring near the quarter critical surface. A simple model yields the observed spectral gaps near the incident frequency ω_0 and near $\omega_0/2$. It also explains the correlation of onset of this scattering with onset of the SRS-A, its transient localization in frequency and time, and the weak azimuthal angular variation. The existence of an upscattered frequency band is also predicted and has been verified by experiment.

29989 **(DOE/DP/40124—24) LLE review. Quarterly report, October-December 1982.** Craxton, R.S. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1984. Contract AC08-80DP40124. 61p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011146.

This edition of the LLE Review contains articles on target interaction experiments on OMEGA and GDL, characterization of symmetry on OMEGA, frequency-conversion technology, advances in target characterization and picosecond research, and NLUF experiments performed on OMEGA during the first quarter of fiscal year 1983 (October-December 1982). The following are some of the highlights of the work described in this issue: (1) a theoretical analysis of illumination uniformity on spherical targets has been developed; (2) an extensive series of thermal-transport experiments at 1.05 μm on OMEGA is reported; (3) spherical targets on OMEGA have been photographed in their harmonic emissions at $2\omega_0$, $3\omega_0/2$, and $5\omega_0/2$; (4) measurements of the continuum x-ray spectra produced by ir- and uv-generated laser plasmas on GDL are reported; (5) a single, monolithic, frequency-conversion cell has been designed, and will be used for the conversion of the first six beams of OMEGA to the uv; (6) an improved interferometric technique for the characterization of nonconcentricity in transparent inertial-fusion targets has been developed; (7) an improvement in an LLE-developed system for time-resolving short electrical signals has led to the generation and measurement of a step-function electrical signal with a rise time of 850 fs; and (8) shifts and widths of hydrogenic ion lines emitted by the dense plasmas generated on OMEGA have been observed in an NLUF experiment.

29990 **(DOE/DP/40124—25) LLE Review. Quarterly report, January-March 1983. Volume 14.** Craxton, R.S. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1983. Contract AC08-80DP40124. 67p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011142.

The following are some of the highlights of the work described in this issue: (1) Work has continued on harmonic emission from GDL and OMEGA. A systematic study of spectral features of emissions at multiples of half the laser frequency has led to an improved understanding of these emissions as potential underdense-plasma diagnostics. (2) Theoretical progress has been made on understanding the two-plasmon-decay instability. (3) Two x-ray instruments incorporating free-standing x-ray transmission gratings have been developed. (4) Three additional developments in x-ray diagnostics are reported: high energy (12 to 14 keV) ionic spectral lines have been recorded with a Von-Hamos spectrograph, mosaic crystals have been used in a geometry which permits both high sensitivity and resolution, and two-dimensional imaging of 10-μm resolution has been achieved using Laue diffraction. (5) Improvements have been made to the laser-driven x-ray-diffraction facility on GDL, and results have been obtained on time-resolved x-ray diffraction from photostimulated biological systems. (6) An experimental system has been developed to better characterize the damage process in thin-film coatings. (7) New techniques have been developed for fabricating laser-fusion targets with ablation layers containing varying amounts of high-atomic-number material. (8) A computer-based system has been developed for the collection and reduction of visible spectroscopic data, permitting a turnaround time of a few seconds rather than several hours. (9) Spectra have been recorded of several high-Z ions in an NLUF experiment, and several new atomic levels have been identified.

29991 **(DOE/DP/40124—26) LLE Review. Quarterly report, April-June 1983.** Soures, J.M. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1984. Contract AC08-80DP40124. 51p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011143.

This issue of LLE Review contains articles on recent progress in the laser fusion effort, on certain aspects of the LLE advanced technology development program, and on National Laser Users Facility activities. Highlights of the work summarized in this issue include: (1) target design calculations indicating increased drive uniformity and target performance with two-color laser irradiation of directly driven, laser-fusion targets; (2) hydrodynamic efficiency measurements conducted with 351-nm laser irradiation showing a close agreement with predictions made using the two-dimensional hydrodynamic code SAGE; (3) continuing theoretical and experimental work aimed at understanding the physical processes taking place in the underdense region of laser-produced plasmas; (4) the initiation of x-ray laser experiments on OMEGA; (5) the development of liquid-crystal devices as laser-blocking, notch filters; (6) the first successful demonstration of single-shot, submicron-resolution, x-ray lithography using a laser-produced plasma as the x-ray source.

29992 **(DOE/DP/40124—27) LLE Review. Quarterly report, July-September 1983. Volume 16.** Epstein, R. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1983. Contract AC08-80DP40124. 68p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011145.

This volume of LLE Review contains articles on the initial phase of the infrared-to-ultraviolet conversion of OMEGA, experimental and theoretical advances in the laser-fusion effort, improved target fabrication capabilities, developments in the picosecond optics area of the LLE advanced technology program, and on the National Laser Users Facility activity.

29993 **(DOE/DP/40124—28) LLE Review. Quarterly report, October-December 1983. Volume 17.** Epstein, R. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1984. Contract AC08-80DP40124. 64p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84011147.

This volume of LLE Review features articles on the infrared-to-ultraviolet conversion of six beams of OMEGA and on the first series of experiments conducted with the reconfigured, up-converted system; developments in the LLE advanced technology program; and activity in the National Laser Users Facility.

29994 (DOE/ER—0046/15, pp 40-43) **Comparison of activation in STARFIRE and MARS first walls.** Heinisch, H.L.; Mann, F.M. Nov 1983. NTIS, PC A07/MF A01. Order Number DE84009143. TI84009143

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1983.

Activation calculations were performed for elements in the MARS and STARFIRE first-wall positions. The seven elements considered (N, Al, Ni, Mo, Cu, Nb, Pb) are those which were found from earlier STARFIRE calculations to require restrictions in order to meet NRC disposal regulations. The importance of the neutron spectrum is demonstrated by a comparison of MARS and STARFIRE results. In the harder spectrum of the MARS first-wall the same elements face restrictions, but for Ni, Mo and Nb the allowable limits are two to five times larger than in STARFIRE.

29995 (DOE/ER—0046/15, pp 120-126) **Influence of irradiation and thermal creep on stress redistribution in fusion blankets.** Blanchard, J.P.; Ghoniem, N.M. (Univ. of California, Los Angeles). Nov 1983. NTIS, PC A07/MF A01. Order Number DE84009143. TI84009143

In Damage analysis and fundamental studies. Quarterly progress report, July-September 1983.

Creep processes, due to thermal and irradiation fields, have generally been assumed to relax stresses resulting from the loading of structural components. However, in order to determine failure modes and mechanisms, a global inelastic structural analysis is required. We have recently developed the STAIRE computer program for STress Analysis Including Radiation Effects. This code is based on modified beam and arch theory for the simultaneous calculation of stresses and deflections in beams of arbitary cross-section. The work is applied to the lifetime analysis of the Mirror Advanced Reactor Study (MARS) blanket modules. The objective of the present paper is to assess the global impact (3-dimensional) of both irradiation and thermal creep strains on the stresses resulting from thermal and swelling strains. The analyzed blanket consists of semi-toroidal tubes around the plasma. Thus, pipes of hollow circular cross-sections are treated as beams hanging between the inlet and outlet headers under a variety of boundary conditions.

29996 **(DOE/ER—0046/16) Damage analysis and fundamental studies. Quarterly progress report, October-December 1983.** (USDOE Office of Energy Research, Washington, DC. Office of Fusion Energy). Feb 1984. 81p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84011791.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report is the twenty-fourth in a series of Quarterly Technical Progress Reports on Damage Analysis and Fundamental Studies (DAFS), which is one element of the Fusion Reactor Materials Program, conducted in support of the Magnetic Fusion Energy Program of the US Department of Energy (DOE). The first eight reports in this series were numbered DOE/ET-0065/1 through 8. This report is organized along topical lines in parallel to a Program Plan of the same title so that activities and accomplishments may be followed readily, relative to that Program Plant. Thus, the work of a given laboratory may appear throughout the report. A new chapter has been added on Reduced Activation Materials to accommodate work on a topic not included in the early program plan. The Contents is annotated for the convenience of the reader.

29997 **(DOE/ER/40121—T1) Acoustic emission instrumentation system for monitoring large superconducting magnets.** Jacob, K.D. (Massachusetts Inst. of Tech., Cambridge (USA)). 1984. Contract AC02-83ER40121. 83p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84009878.

Portions are illegible in microfiche products; Thesis.

An Acoustic Emission (AE) instrumentation system has been developed for monitoring large superconducting magnet systems. This new system permits AE signal recording with improved signal-to-noise ratios and makes possible the development and use of more sophisticated data analysis techniques. The system has been designed to monitor some of the six superconducting magnets being assembled at the Oak Ridge National Laboratory under the US Department of Energy Large Coil Program (LCP). Installation, calibration, and testing of the AE system on one of the LCP coils is described. In addition, results of experiments designed to enhance the understanding of the propagation of AE signals in superconducting magnets are presented. Finally, work currently being conducted towards improving the acquisition and analysis of AE data is outlined.

29998 **(EPRI-AP—3429) Inertial confinement fusion. Technical forecast handbook.** Steele, W.G.; Salem, S.L.; McCarville, T.J.; Kulkarni, R.B.; Sicherman, A. (TRW Energy Development Group, Redondo Beach, CA (USA); Woodward-Clyde Consultants, Walnut Creek, CA (USA)). Mar 1984. 178p. EPRI-RRC, Box 50490, Palo Alto, CA 94303. Order Number DE84920341.

This report details R and D-oriented technical forecast information relating to the development of technologies necessary for commercial energy applications of inertial confinement fusion (ICF). This study has developed and applied techniques for obtaining developmental information through detailed personal interviews. A fractile Bayesian interrogation procedure was used to interview experts formally and consistently to elicit their subjective probability distributions of the time required to advance ICF-critical technologies. Interviews were performed on target gain, target fabrication, liquid metal technologies, light ion diode drivers, rf and induction linac heavy ion drivers, KrF laser drivers, and reactor cavity phenomena. The Handbook presents a discussion of the major scientific/technical issues for each topic, the results of the individual interviews and the results of combining assessments of different experts. Results of this initial application showed a reasonable amount of agreement among different experts interviewed independently on the same topic. Consequently, the obtained technical forecasts could be considered to be representative of present scientific judgements on these ICF issues. This handbook documents the data gathered from the interviews, while the direct application of the data for R and D planning is reported in a separate document.

29999 (INIS-mf—8921, pp 57) **Effects of magnetic fields on the electron heat transport in laser produced plasma.** Strauss, M.; Hazak, G.; Shvarts, D. (Israel Atomic Energy Commission, Beersheba. Nuclear Research Center-Negev); Craxton, R.S. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1983. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780235. (CONF-8303128—Summ.). TI84780235

From Israel Physical Society annual meeting; Ramat-Gan, Israel (24 Mar 1983).

30000 (INIS-SU—203, pp 80-81) **Cold cathode gaseous ion source for pure vacuum systems.** Gribanov, Yu.A.; Rybalko, V.F.; Ruzhitskij, V.V.; Khazan, S.M. 1982. (In Russian). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780155. TI84780155

In Radiation damage physics and radiation technology.

The design of the Keller-type ion source that contains no organic elements contaminating the vacuum system is presented. The source can produce gaseous-ion beams with currents ranging between 120 and 200 A. In the case of molecular gases, the content of atomic ions is about 10 %. The extraction potential is 2 to 7 kV. The power consumption of the source is about 35 W, no forced cooling being required. The source is designed for solving some problems of the accelerating technique and mass-spectrometry of secondary ions.

30001 **(IPF—82-17) Proposed 60 GHz transmission line system for ECRH on W VII-AS.** Janzen, G.; Schueller, P.G.; Thumm, M. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung). Dec 1982. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84751319.

The transmission line and launching systems for non ohmic plasma production and heating by ECR-waves with frequencies of around 60 to 70 GHz in the Garching Wendelstein stellarator W VIIa (200 kW, 100 ms) and in the future "Advanced Stellarator" W VII-AS (800 kW, cw) are described. The ECRH systems meet the requirements for neutral gas breakdown (R-wave), heating of a "cold" plasma (X-mode) and heating of a "warm" plasma (O-mode) in a combined way. The TE_{02}/TE_{01} gyrotron output mode mixture is converted into a pure TE_{01} mode which is used for long distance transmission in smooth overmoded waveguides. Waveguide tapers with nonlinear contours, circumferentially corrugated normal mode bends with nonlinear curvature, and mode selective directional couplers will be installed in the system. A TE_{01}->TE_{11} mode converter produces an almost linearly polarized rf field for improved irradiation. The ECR-waves will be launched by focusing mirrors and corrugated polarization twist reflectors. An optional hybrid HE_{11} mode system will launch an axisymmetric, narrow centred and quasi-optical beam with nearly no cross polarization.

30002 **(IPP—1/217) ASDEX-UG. ASDEX upgrade project proposal. Phase 2.** (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). May 1983. 158p. NTIS (US Sales Only), PC A08/MF A01. Order Number DE84751318.

The objective of ASDEX UG is to investigate the problems relating to tokamak divertor physics and the boundary layer of hot plasmas which cannot be covered otherwise by either ASDEX or other EUROPEAN tokamaks, including JET, but whose investigation is indispensable for NET and INTOR. The configuration of ASDEX UG is changed as compared with ASDEX due to the requirement that all poloidal field coils are located outside the toroidal field magnet. This leads to a highly elongated D-shaped plasma with an "open" divertor, which does not allow to close the divertor chamber by such simple means as in ASDEX. In section 2, the aims of ASDEX UG are repeated briefly and the essential features and parameters of the tokamak system are summarized. The summary includes an overview of the tokamak design, the time schedule of design and construction concluding with the estimated investment cost and manpower required. In section 3 the tokamak system components are treated. The circuits and energy supply for the different electrical components are described in section 4. Auxiliary heating requirements and methods are discussed in section 5. Section 6 presents a survey over the periphery of the tokamak system including preparation of the building and radiation shielding. Section 7 outlines the physical programme. Section 8 is devoted to diagnostics. Finally, the principal concepts for control, data acquisition and handling are outlined in section 9.

30003 **(IPP—1/218) Centrifuge pellet injector for JET.** Andelfinger, C.; Buchelt, E.; Jacobi, D.; Lackner, E.; Schilling, H.B.; Ulrich, M.; Weber, G. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Aug 1983. 82p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84751289.

An engineering design of a centrifuge pellet injector for JET is reported as part of the Phase I contract number JE 2/9016. A rather detailed design is presented for the mechanical and electronic features. Stress calculations, dynamic behaviour and life estimates are considered. The interfaces to the JET vacuum system and CODAS are discussed. Proposals for the pellet diagnostics (velocity, mass and shape) are presented.

30004 **(IPP—1/219) Pneumatic pellet injector for JET.** Andelfinger, C.; Buechl, K.; Jacobi, D.; Sandmann, W.; Schiedeck, J.; Schilling, H.B.; Weber, G. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jul 1983. 115p. NTIS (US Sales Only), PC A06/MF A01. Order Number DE84751290.

Pellet injection is a useful tool for plasma diagnostics of tokamaks. Pellets can be applied for investigation of particle, energy and impurity transport, fueling efficiency and magnetic surfaces. Design, operation and control of a single shot pneumatic pellet gun is described in detail including all supplies, the vacuum system and the diagnostics of the pellet. The arrangement of this injector in the torus hall and the interfaces to the JET system and CODAS are considered. A guide tube system for pellet injection is discussed but it will not be recommended for JET.

30005 **(IPP—6/228) Behaviour of beryllium in a tokamak fusion reactor.** Yip Hoi-tung. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Jun 1983. 45p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751349.

The behaviour of beryllium in a fusion plasma was studied by using the BITC (Bologna Impurity Transport Code) code for the parameters of the JET. The radial profiles of Z-effective, ionization states and fluxes are given. The radiation losses by the beryllium impurity in a fusion reactor are estimated less than 1% of the total power input. The radiation losses by berryllium in corona equilibrium are also presented.

30006 **(Juel—1820) Resonant helical magnetic limiter.** Steffen, B.; Fuchs, G.; Nicolai, A.; Wolf, G.H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik; Association Euratom-Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)). Dec 1982. 55p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751339.

The physical goals and principles of helical magnetic limiters are described. They are used to develop design criteria for modular structures of helical conductors, which are then applied to a special case (TEXTOR). A 1-dimensional transport code is used to predict the plasma-parameters for the helical magnetic limiter case. These calculations show a substantial reduction (as compared to a normal limiter case) of the temperatures in the plasma boundary, while the plasma density there stays sufficiently large.

30007 **(Juel-Spez—229) Manufacturing and quality test of the metal bellows of the TEXTOR vacum vessel.** Butzek, D.A.; Cordewiner, H.J.; Stickelmann, C.; Mueller, H.P.; Hemminger, R. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Zentralabteilung Allgemeine Technologie; Association Euratom-Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.)). Nov 1983. 37p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84751343.

The vacuum vessel of the TEXTOR - fusion - experiment is an all-welded metal torus consisting of eight rigid sections interconnected by eight metal bellows. The diameter of the bellows is 1300

mm. In operation the temperatures of these bellows are within the range of 300°-500°C. The heating of the vacuum vessel causes displacements of the bellows of 7 mm (axial) and 1,5 mm (lateral) respectively. Design, manufacturing and especially quality tests and acceptance tests of the metal bellows are described in this report.

30008 **(KFK—3584) Conceptual design of two helium cooled fusion blankets (ceramic and liquid breeder) for INTOR.** Dalle Donne, M.; Dorner, S.; Taczanowski, S. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik). Aug 1983. 60p. (EUR—7987-e). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84751297.

Neutronic and heat transfer calculations have been performed for two helium cooled blankets for the INTOR design. The neutronic calculations show that the local tritium breeding ratios, both for the ceramic blanket (Li_8SiO_8) and for the liquid blanket ($Li_{17}Pb_{83}$) solutions, are 1.34 for natural tritium and about 1.45 using 30% Li^6 enrichment. The heat transfer calculations show that it is possible to cool the divertor section of the torus (heat flux = 1.7 MW/m²) with helium with an inlet pressure of 52 bar and an inlet temperature of 40°C. The temperature of the back face of the divertor can be kept at 130°C. With helium with the same inlet conditions it is possible to cool the first wall as well (heat flux = 0.136 MW/m²) and keep the back-face of this wall at a temperature of 120°C. For the ceramic blanket we use helium with 52 bar inlet pressure and 400°C inlet temperature to ensure sufficiently high temperatures in the breeder material. The maximum temperature in the pressure tubes containing the blanket is 450°C, while the maximum breeder particle temperature is 476°C.

30009 **(LA-UR—84-1154) Convective mechanism for inhibition of heat conduction in laser produced plasmas.** Lee, P.H.Y.; Willi, O.; Trainor, R.J. (Los Alamos National Lab., NM (USA)). 27 Jun 1984. Contract W-7405-ENG-36. 7p. (CONF-840616—15). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011336.

From International conference on plasma physics; Lausanne, Switzerland (27 Jun 1984).

Portions are illegible in microfiche products.

In laser-produced plasmas, the laser energy is absorbed only below and up to the critical density. For laser fusion applications, this energy must be transported beyond the corona via electron thermal conduction towards colder, higher density regions of the target to heat up material and cause ablation, which in turn generates an inward pressure to compress the fusion fuel. If the heat conduction is inhibited, the consequences will be a weaker ablation and therefore a weaker implosion. For many years now, the inhibition of heat conduction, i.e., the reduction of heat conduction relative to classical conduction, in laser-produced plasmas at relevant irradiances has been apparent from the large body of experimental evidence. Many mechanisms, such as dc magnetic fields, ion acoustic turbulence, and Weibel instabilities, have been proposed to be the cause of inhibition of heat conduction. Even improved calculations of the classical heat flux have been carried out to solve this problem. Nevertheless, no single one of the above mentioned mechanisms can explain the large inhibition observed in the experiments.

30010 **(LA-UR—84-1354) Ceramics for fusion devices.** Clinard, F.W. Jr. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 9p. (CONF-840570—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011409.

From Materials for future energy systems conference; Washington, DC, USA (1 May 1984).

Portions are illegible in microfiche products.

Ceramics are required for a number of applications in fusion devices, among the most critical of which are magnetic coil insulators, windows for RF heating systems, and structural uses. Radiation effects dominate consideration of candidate materials, although good pre-irradiation properties are a requisite. Materials and components can be optimized by careful control of chemical and microstructural content, and application of brittle material design and testing techniques. Future directions for research and development should include further extension of the data base in the areas of electrical, structural, and thermal properties; establishment of a fission neutron/fusion neutron correlation including transmutation gas effects; and development of new materials tailored to meet the specific needs of fusion reactors.

30011 **(ORNL/FEDC—83/10) Equilibrium modeling of the TFCX poloidal field coil system.** Strickler, D.J.; Miller, J.B.; Rothe, K.E.; Peng, Y.K.M. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 55p. NTIS, PC A04/MF A01; GPO Dep. Order Number DE84012040.

The Toroidal Fusion Core Experiment (TFCX) isproposed to be an ignition device with a low safety factor ($q \simeq 2.0$), rf or rf-assisted startup, long inductive burn pulse ($\sim$ 300 s), and an elongated plasma cross section ($\kappa = 1.6$) with moderate triangularity ($\delta = 0.3$). System trade studies have been carried out to assist in choosing an appropriate candidate for TFCX conceptual design. This report describes an important element in these system studies - the magnetohydrodynamic (MHD) equilibrium modeling of the TFCX poloidal field (PF) coil system and its impact on the choice of machine size. Reference design points for the all-super-conducting toroidal field (TF) coil (TFCX-S) and hybrid (TFCX-H) options are presented that satisfy given PF system criteria, including volt-second requirements during burn, mechanical configuration constraints, maximum field constraints at the superconducting PF coils, and plasma shape parameters. Poloidal coil current waveforms for the TFCX-S and TFCX-H reference designs consistent with the equilibrium requirements of the plasma startup, heating, and burn phases of a typical discharge scenario are calculated. Finally, a possible option for quasi-steady-state operation is discussed.

30012 **(ORNL/Sub—79/33200/16) Development program for a 200 kW, CW gyrotron. Quarterly report No. 16, April-June 1983.** DeHope, W.J.; Ferguson, P.E.; Hart, S.L.; Matranga, V.A.; Sandoval, J.J.; Schmitt, M.J.; Tancredi, J.J. (Hughes Aircraft Co., Torrance, CA (USA). Electron Dynamics Div.). 1983. Contract AC05-84OR21400. 42p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011717.

The objective of this program is the design and development of a millimeter-wave device to produce 200 kW of continuous wave power at 60 GHz. The device, a gyrotron oscillator, will be compatible with power delivery to an electron-cyclotron heated plasma. Smooth control of rf power over a 17 dB range is required, and the device should be capable of operation into a severely time-varying load mismatch. Progress is presented in the testing, analyses and understanding of S/N 1B behavior and in preparing S/N 3 for test in the coming report period.

30013 **(PPPL—2095) Steady-state operation of spheromaks by inductive techniques.** Janos, A. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. Contract AC02-76CH03073. 24p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011200.

A method to maintain a steady-state spheromak configuration inductively using the S-1 Spheromak device is described. The S-1 Spheromak formation apparatus can be utilized to inject magnetic helicity continuously (C.W., not pulsed or D.C.) into the spheromak configuration after equilibrium is achieved in the linked mode of operation. Oscillation of both poloidal- and toroidal-field currents in the flux core (psi-phi Pumping), with proper phasing, injects a net time-averaged helicity into the plasma. Steady-state maintenance relies on flux conversion, which has been earlier identified. Relevant experimental data from the operation of S-1 are described. Helicity flow has been measured and the proposed injection scheme simulated. In a reasonable time practical voltages and frequencies can inject an amount of helicity comparable to that in the initial plasma. Plasma currents can be maintained or increased. This pumping technique is similar to F-Θ Pumping of a Reversed-Field-Pinch but is applied to this inverse-pinch formation.

30014 **(PPPL-Q—40) Annual report, October 1, 1981-September 30, 1982.** Phillips, C.A. (ed.). (Princeton Univ., NJ (USA). Plasma Physics Lab.). 1984. Contract AC02-76CH03073. 97p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84011480.

The construction of the Tokamak Fusion Test Reactor (TFTR) has been proceeding in a highly satisfactory manner,

giving confidence that the project schedule will be met. The vacuum vessel and toroidal-field coil systems are now in place, and the entire mechanical assembly process is about to be completed. Experimental operation of TFTR will begin with ohmic-heating studies in early CY83, and will proceed to intensive neutral-beam heating in CY84. Radio-frequency experiments on the Princeton Large Torus (PLT) have used a new 3-MW ion cyclotron heating source to demonstrate second-harmonic heating of hydrogen ions up to temperatures of 3 keV. Lower hybrid current drive has sustained plasma currents as large as 400 kA in quasi-steady state. The 7-MW neutral-beam-heating capability of the Poloidal Divertor Experiment (PDX) was utilized to investigate finite-beta stability limits. Beta values above 3% were achieved at safety factor values as low as 1.7. A physical mechanism for beta-limitation was discovered and documented: the energetic-ion-driven, fishbone mode of MHD instability. Construction of the S-1 spheromak is progressing on schedule, with preliminary experimental operation planned for early CY83.

30015 **(RL—83-083) Heavy ion inertial fusion - an overview.** Lawson, J.D. (Rutherford Appleton Lab., Chilton (UK)). Sep 1983. 18p. (CONF-8309216—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701677.

From Meeting on interactions between charged particle beams and matter; Grenoble, France (1 Sep 1983).

Energetic heavy ions represent an alternative to laser light and light ions as "drivers" for supplying energy for inertial confinement fusion. To induce ignition of targets containing thermonuclear fuel, an energy of several megajoules has to be focused on to a target with radius a few millimetres in a time of some tens of nanoseconds. Serious study of the use of heavy ion drivers for producing useful power in this way has been underway for seven years, though funding has been at a low level. In this paper the requirements for targets, accelerator, and reactor vessel for containing the thermonuclear explosion are surveyed, and some of the problems to be solved before the construction of a power station can realistically be contemplated are discussed.

30016 (SAI/APPAT—23-30-31-33-34, pp 1-4) **Safety comparison of d-d and d-t fueled fusion reactors.** Dabiri, A.E.; Gurol, H. (Science Applications, Inc., La Jolla, CA). Apr 1984. NTIS, PC A02/MF A01. Order Number DE84011201. (CONF-831203—139). TI84011201

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The purpose of this paper is to compare the safety of d-d and d-t fueled fusion reactors. Issues related to public (as opposed to personnel) safety are considered only. The reactor concepts considered are: tokamaks, tandem mirror reactors (TMRs) and compact reversed field pinch reactors (CRFPRs). It is found that the consequences of activated coolant corrosion product and activated structure release are similar for d-d and d-t reactors. The major safety related difference between the two fuel cycles is the much lower tritium inventory of d-d reactors and the absence of lithium compounds.

30017 (SAI/APPAT—23-30-31-33-34, pp 5-8) **d-d Compact reversed field pinch reactor technology assessment.** Dabiri, A.E.; Glancy, J.E. (Science Applications, Inc., La Jolla, CA). Apr 1984. NTIS, PC A02/MF A01. Order Number DE84011201. (CONF-831203—139). TI84011201

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

A quantitative comparison of the technology requirements, safety performance, and cost of a d-d compact reversed-field pinch reactor (CRFPR) relative to a d-t/CRFPR has been performed. The first wall/blanket and energy-recovery cycle for the d-d reactor is simpler and more efficient than the d-t reactor. In other technology areas (such as magnets and vacuum systems) d-d requirements are not significantly different than the d-t reactor. Tritium technology for processing the plasma exhaust is required for d-d reactors, but no tritium containment around the blanket or heat transport system is needed. Safety analysis shows similar consequences for the release of activated corrosion products or activated first wall/blanket structure. Consequences of all postulated d-d accidents for tritium releases are significantly smaller than those from the d-t reactor. Cost studies have been performed for a series of d-d reactors and compared with a d-t reactor.

30018 (SAI/APPAT—23-30-31-33-34, pp 9-12) **Compact fusion reactors availability analysis.** Dabiri, A.E.; May, R.F. (Science Applications, Inc., La Jolla, CA). Apr 1984. NTIS, PC A02/MF A01. Order Number DE84011201. (CONF-831203—139). TI84011201

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Compact fusion reactor maintenance approach was identified, and schedule maintenance downtime analysis was performed for d-t and d-d-fueled Compact Reversed-Field Pinch Reactors (CRFPR). The results were then compared against each other, as well as against the conventional tokamak reactor design (STARFIRE). The results indicate that the d-t/CRFPR design may realize a 20 percent increase in availability over the conventional design. This increase is attributed primarily to the ability of the compact reactor power core to be replaced as an integral unit as opposed to the power core sector disassembly requirements inherent in the conventional design.

30019 (SAI/APPAT—23-30-31-33-34, pp 13-16) **Safety assessment of the MARS tandem mirror reactor.** Gurol, H.; Dabiri, A.E. (Science Applications, Inc., La Jolla, CA). Apr 1984. NTIS, PC A02/MF A01. Order Number DE84011201. (CONF-831203—139). TI84011201

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

In this study, the safety of the MARS tandem mirror reactor is assessed. Only prompt public consequences are considered. Plant boundary doses are calculated at 1000 m. The major radioactive inventories are due to the first-wall/blanket structure, coolant, and tritium. The conclusions are summarized below: (1) Mechanisms and conditions for releasing large fractions of the radioactive HT-9 structure were not found. The maximum dose is below 0.1 rem, since only oxides of molybdenum are expected to be released. (2) Because the activated corrosion products are filtered, most of the coolant activity is due to the LiPb. A LOCA can result in large doses only if this activity can be transported outside the reactor containment building. Most of the LiPb is expected to solidify. Aerosols that are produced will likely plate out on surfaces or settle. (3) Various tritium accident scenarios were considered. Release of all the tritium in the reactor building (53 g) leads to a dose of 21 rem.

30020 (SAI/APPAT—23-30-31-33-34, pp 17-20) **d-d Tandem mirror reactor assessment.** Dobrott, D.; Gurol, H.; Shuy, G.W. (Science Applications, Inc., La Jolla, CA). Apr 1984. NTIS, PC A02/MF A01. Order Number DE84011201. (CONF-831203—139). TI84011201

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

A conceptual tandem mirror reactor (TMR) that is fueled by the catalyzed-deuterium fuel cycle (Cat-d) is assessed with respect to physics, technology, safety, and cost. A comparison with respect to these issues is made between this reactor and a deuterium-tritium fueled TMR similar to that developed for the MARS study. Both designs have ends stoppered by a combination of magnetic and electrostatic fields and fusion takes place within the solenoid. The magnetic field end plugs are formed by a combination of 24 Tesla coils and a system of 8 Tesla yin-yang coils to provide stability. The ambipolar potential electron and ion plugs are formed in the yin-yangs and are created by a combination of neutral beams and electron cyclotron resonance heating (ECRH).

30021 **(SAI/APPAT—23-30-31-33-34) Papers for the 10th symposium on fusion engineering.** (Science Applications, Inc., La Jolla, CA (USA). Applied Plasma Physics and Technology Div.). Jan 1984. Separate abstracts were prepared for the five included papers. (MOW)

30022 **(SAND—83-1519) Current status of calculations and measurements of ion stopping power in ICF plasmas.** Mehlhorn, T.A.; Peek, J.M.; McGuire, E.J.; Olsen, J.N.; Young, F.C. (Sandia National Labs., Albuquerque, NM (USA); Naval Research Lab., Washington, DC (USA)). Dec 1983. Contract AC04-76DP00789. 26p. (CONF-830354—1; SAND—83-0663C). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84005880.

From International workshop on atomic physics for ion driven fusion; Paris, France (21 Mar 1983).

More precise stopping power models for use in ICF target design need to be developed. The light ion beam ICF program is now moving into a phase where ad hoc scaling of certain key physics parameters in the stopping power models is no longer sufficient. Our goal is to predict ion ranges in ICF targets to within about 10 to 20%. A verified stopping power model is also essential in diagnosing target irradiation intensities; such data can only be inferred by target response. Presently, our area of primary concern involves calculating the stopping power of the bound electrons of partially ionized atoms. One bound electron stopping power model that we are investigating uses the local oscillator model along with Hartree-Fock-Slater atomic charge density profiles to calculate I(Z,q,E), a generalized average ionization potential for the target electrons. This method is being studied systematically to look for deficiencies in the underlying physics model, especially at low projectile velocities. Another procedure uses the Generalized Oscillator Strength model to calculate the bound electron stopping. Experimental measurements of enhanced stopping power in ICF plasmas at the 0.3-TW/cm^2 level have been reported by the Naval Research Laboratory. Further experiments at Sandia are aimed at extending this data base both to higher ionization states and to higher-Z targets using a 1.2-TW/cm^2 proton beam on the PROTO-I accelerator.

30023 **(SAND—84-0117) APC-II: an electron beam propagation code.** Iwan, D.C.; Freeman, J.R. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 35p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84011532.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The computer code APC-II simulates the propagation of a relativistic electron beam through air. APC-II is an updated version of the APC envelope model code. It incorporates an improved conductivity model which significantly extends the range of stable calculations. A number of test cases show that these new models are capable of reproducing the simulations of the original APC code. As the result of a major restructuring and reprogramming of the code, APC-II is now friendly to both the occasional user and the experienced user who wishes to make modifications. Most of the code is in standard ANS-II Fortran 77 so that it can be easily transported between machines.

30024 **(UCID—19837-83) RTNS-II: irradiations at the Rotating Target Neutron Source-II. 1983 annual report.** (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 79p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84012031.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This is the second annual report summarizing irradiation experiments and operations at RTNS-II. It covers calendar year 1983 and includes reports on all irradiations, non-fusion as well as fusion, and on utilization of Monbusho's transmission electron microscope (TEM) a RTNS-II. Each summary article has been submitted by the investigator and has been altered only to meet the style and format requirements of this report.

30025 **(UCLA/PPG—765-Vol.1) Magnetic fusion energy plasma interactive and high heat flux components. Volume I. Technical assessment of the critical issues and problem areas in the plasma materials interaction field.** Conn, R.W.; Gauster, W.B.; Heifetz, D.; Marmar, E.; Wilson, K.L. (eds.). (California Univ., Los Angeles (USA)). Jan 1984. 172p. NTIS, PC A08/MF A01; 1; GPO Dep. Order Number DE84011527.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A technical assessment of the critical issues and problem areas in the field of plasma materials interactions (PMI) in magnetic fusion devices shows these problems to be central for near-term experiments, for intermediate-range reactor devices including D-T burning physics experiments, and for long-term reactor machines. Critical technical issues are ones central to understanding and successful operation of existing and near-term experiments/reactors or devices of great importance for the long run, i.e., ones which will require an extensive, long-term development effort and thus should receive attention now. Four subgroups were formed to assess the critical PMI issues along four major lines: (1) PMI and plasma confinement physics experiments; (2) plasma-edge modelling and theory; (3) surface physics; and (4) materials technology for in-vessel components and the first wall. The report which follows is divided into four major sections, one for each of these topics.

30026 **(UCRL—15583) AR coating with high damage threshold on SiO_2 glass. Final report.** Toratani, H.; Kanamori, C.; Nakajima, S.; Nakagawa, K.; Izumitani, T. (Hoya Optics, Inc., Fremont, CA (USA)). 12 Sep 1983. Contract W-7405-ENG-48. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011063.

Portions are illegible in microfiche products.

The following experimental results are shown: (1) uniformity of AR coatings on Optosil and Sprasil provided by LLNL; (2) relation between cleaning methods and properties of AR coatings; (3) baking and sintering conditions of gel-derived films; (4) heat treatment of AR coating in O_2 flow.

30027 **(UCRL—90033) Nova laser alignment control system.** Van Arsdall, P.J.; Holloway, F.W.; McGuigan, D.L.; Shelton, R.T. (Lawrence Livermore National Lab., CA (USA)). 29 Mar 1984. Contract W-7405-ENG-48. 29p. (CONF-8404124—4). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010992.

From SPIE technical symposium; Arlington, VA, USA (29 Apr 1984).

Portions are illegible in microfiche products.

Alignment of the Nova laser requires control of hundreds of optical components in the ten beam paths. Extensive application of computer technology makes daily alignment practical. The control system is designed in a manner which provides both centralized and local manual operator controls integrated with automatic closed loop alignment. Menudriven operator consoles using high resolution color graphics displays overlaid with transport touch panels allow laser personnel to interact efficiently with the computer system. Automatic alignment is accomplished by using image analysis techniques to determine beam references points from video images acquired along the laser chain. A major goal of the design is to contribute substantially to rapid experimental turnaround and consistent alignment results. This paper describes the computer-based control structure and the software methods developed for aligning this large laser system.

30028 **(UCRL—90191) Low level signal data acquisition for the MFTF-B superconducting magnet system.** Montoya, C.R. (Lawrence Livermore National Lab., CA (USA)). 28 Mar 1984. Contract W-7405-ENG-48. 11p. (CONF-8404138—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011047.

From 8. national engineering symposium of the Mexican American Engineering Society; Albuquerque, NM, USA (11 Apr 1984).

Portions are illegible in microfiche products.

Acquisition of low level signals from sensors mounted on the superconducting magnets in the Tandem Mirror Fusion Test Facili-

ty (MFTF-B) impose very strict requirements on the magnet signal conditioning and data acquisition system. Of the various types of sensors required, thermocouples and strain gages produce very low level outputs. These low level outputs must be accurately measured in the harsh environment of slowly varying magnetic fields, cryogenic temperatures, high vacuum, 80 kV pulse power, 60 Hz, 17 MHz and 28, 35, and 56 GHz electrical noise and possible neutron radiation. Successful measurements require careful attention to grounding, shielding, signal handling and processing in the data acquisition system. The magnet instrumentation system provides a means of effectively measuring both low level signals and high level signals from all types of sensors. Various methods involved in the design and implementation of the system for signal conditioning and data gathering will be presented.

30029 **(UCRL—90246-Rev.1) Heavy ion inertial fusion: interface between target gain, accelerator phase space and reactor beam transport revisited.** Barletta, W.A.; Fawley, W.M.; Judd, D.L.; Mark, J.W.K.; Yu, S.S. (Lawrence Livermore National Lab., CA (USA); Lawrence Berkeley Lab., CA (USA); Stanford Linear Accelerator Center, CA (USA)). 22 Feb 1984. Contract W-7405-ENG-48. 15p. (CONF-840142—11-Rev.1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011048.

From International symposium on heavy ion accelerators and their applications to inertial fusion; Tokyo, Japan (23 Jan 1984).

Portions are illegible in microfiche products.

Recently revised estimates of target gain have added additional optimistic inputs to the interface between targets, accelerators and fusion chamber beam transport. But it remains valid that neutralization of the beams in the fusion chamber is useful if ion charge state $Z > 1$ or if > 1 kA per beamlet is to be propagated. Some engineering and economic considerations favor higher currents.

30030 **(UCRL—90338) Magnetic fusion: planning for the future.** Fowler, T.K. (Lawrence Livermore National Lab., CA (USA)). 7 Feb 1984. Contract W-7405-ENG-48. 29p. (CONF-840285—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010989.

From Committee on international cooperation in magnetic fusion of the National Research Council; Livermore, CA, USA (7 Feb 1984).

Portions are illegible in microfiche products.

A brief review of international cooperation in the fusion program is given. The author shares his views on the technical prospects and future potential of fusion as a practical energy source. (MOW)

30031 **(UCRL—90711) Generalized laser filamentation instability coupled to cooling instability.** Liang, E.P.; Wong, J.; Garrison, J. (Lawrence Livermore National Lab., CA (USA)). 24 Apr 1984. Contract W-7405-ENG-48. 6p. (CONF-8406115—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011069.

From 17. AIAA fluid dynamics, plasmadynamics and laser conference; Snowmass, CO, USA (25 Jun 1984).

Portions are illegible in microfiche products.

We consider the propagation of laser light in an initially slightly nonuniform plasma. The classical dispersion relation for the laser filamentation growth rate (see e.g., B. Langdon, in the 1980 Lawrence Livermore National Laboratory Laser Program Annual Report, pp. 3-56, UCRL-50021-80, 1981) can be generalized to include other acoustical effects. For example, we find that the inclusion of potential imbalances in the heating and cooling rates of the ambient medium due to density and temperature perturbations can cause the laser filamentation mode to bifurcate into a cooling instability mode at long acoustic wavelengths. We also attempt to study semi-analytically the nonlinear evolution of this and related instabilities. These results have wide applications to a variety of chemical gas lasers and phenomena related to laser-target interactions (e.g., jet-like behavior).

30032 **Vortex shedding due to laser ablation.** Emery, M.H.; Gardner, J.H.; Boris, J.P.; Cooper, A.L. (Laboratory for Computational Physics, Naval Research Laboratory, Washington, DC 20375). *Physics of Fluids;* **27**: No. 5, 1338-1340(May 1984).

An investigation of laser-driven targets shows the generation and subsequent shedding of strong vortex structures from the ablation layer whenever the density and pressure profiles become noncollinear. It is shown here that vortex shedding explains the inhibited linear Rayleigh—Taylor growth, the short-wavelength cutoff, dynamic stabilization and clarifies the role of the Kelvin—Helmholtz roll-up.

30033 **Reduced-aspect-ratio stellarator reactors.** Hitchon, W.N.G. (Torsatron/Stellarator Lab., Wisconsin Univ., Madison (USA)). *Nuclear Fusion;* **24**: No. 1, 91-102(Jan 1984).

The extent to which the size of a modular stellarator reactor may be reduced is investigated by means of an analytic model of the reactor. The various means employed include varying the blanket/shield thickness, the power output and the wall loading. An optimum design is found, the major radius of which tends to be insensitive to changes in these quantities, although a decrease in the power output leads to a rather smaller decrease in reactor dimensions, as would be expected. Varying the plasma beta at fixed (iota/2π)^{2}epsilon or, alternatively, increasing the rotational transform per field period, may, however, allow configurations with fewer field periods to be accessed which have a substantially smaller major radius than the 'standard case' adopted. The magnetics of various configurations required by the model are checked by field line following and the performance claimed is shown to be relatively easily achieved. Costs of two promising configurations are estimated; these designs are found to be highly competitive with other conceptual fusion reactors in terms of cost, as well as requiring less advanced technologies.

30034 **Ab initio calculations of the charge state of a fast heavy ion stopping in a finite temperature target.** Bailey, D.; Lee, Y.T.; More, R.M. (University of California, Lawrence Livermore National Laboratory (U.S.A.)). *Journal de Physique (Paris), Colloque;* 149-158(Nov 1983). (CONF-830354—).

From International workshop on atomic physics for ion driven fusion; Paris, France (21 Mar 1983).

We present a calculation of the time dependent charge state of a heavy projectile traversing a finite temperature target. The calculation uses an average-atom model to integrate the rate equations.

30035 **Current status of calculations and measurements of ion stopping power in ICF plasmas.** Mehlhorn, T.A.; Peek, J.M.; McGuire, E.J.; Olsen, J.N. (Sandia National Laboratories, Albuquerque, N.M. (U.S.A.)); Young, F.C. (Naval Research Laboratory, Washington, D.C. (U.S.A.)). *Journal de Physique (Paris), Colloque;* 39-66(Nov 1983). (CONF-830354—).

From International workshop on atomic physics for ion driven fusion; Paris, France (21 Mar 1983).

More precise stopping power models for use in ICF target design need to be developed. The light ion beam ICF program is now moving into a phase where "ad hoc" scaling of certain key physics parameters in the stopping power models is no longer sufficient. Our goal is to predict ion ranges in ICF targets to within about 10-20%. A verified stopping power model is also essential in diagnosing target irradiation intensities; such data can only be inferred by target response. Presently, our area of primary concern involves calculating the stopping power of the bound electrons of partially ionized atoms. One bound electron stopping power model that we are investigating uses the local oscillator model along with Hartree-Fock-Slater atomic charge density profiles to calculate I(Z,q,E), a generalized average ionization potential for the target electrons. This method is being studied systematically to look for deficiencies in the underlying physics model, especially at low projectile velocities. Another procedure uses the Generalized Oscillator strength model to calculate the bound electron stopping. Experimental measurements of enhanced stopping power in ICF plasmas

at the 0.3 TW/cm² level have been reported by the Naval Research Laboratory. Further experiments at Sandia are aimed at extending this data base both to higher ionization states and to higher-Z targets using a 1.2 TW/cm² proton beam on the PROTO-I accelerator.

30036 **Design criteria for afterheat removal in fusion power plants.** Kastenberg, W.E. (University of California Los Angeles, CA 90024). *Transactions of the American Nuclear Society;* **45**: 183-184(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30037 **Shock propagation through the Cascade ICF reactor Li_2O-pebble blanket.** Pitts, J.H. (Lawrence Livermore National Lab. P.O. Box 808 Livermore, CA 94550). *Transactions of the American Nuclear Society;* **45**: 184-185(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30038 **Environmental considerations of LOTRIT.** Ragheb, M.; Miley, G.H.; Stubbins, J. (University of Illinois Urbana, IL 61801). *Transactions of the American Nuclear Society;* **45**: 177-179(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30041 **Tritium catalyzed deuterium (TCD) tokamaks.** Greenspan, E.; Miley, G.H. (University of Illinois Urbana, IL 61801). *Transactions of the American Nuclear Society;* **45**: 173-175(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30042 **Fissionable blankets for inertial confinement fusion production of tritium.** Pendergrass, J.H.; Battat, M.E.; Thayer, G.R. (Los Alamos National Laboratory P.O. Box 1663 Los Alamos, NM 87545). *Transactions of the American Nuclear Society;* **45**: 181-182(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30043 **A new neutron-feedback ICF driver.** Miley, G.H.; Elsayed-Ali, H.; Zedicker, M. (University of Illinois Urbana, IL 61801). *Transactions of the American Nuclear Society;* **45**: 180-181(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30044 **Neutron measurements and radiation damage calculations for fusion materials studies.** Greenwood, L.R. (Argonne National Laboratory 9700 S. Cass Avenue Argonne, IL 60439). *Transactions of the American Nuclear Society;* **45**: 225-226(Oct 1983). (CONF-831047—).

From American Nuclear Society winter meeting; San Francisco, CA, USA (30 Oct 1983).

30045 **Improved superconducting magnet wire.** Schuller, I.K.; Ketterson, J.B. (to Dept. of Energy). US Patent Application 6-523,990. 16 Aug 1983. 7p. Contract W-31-109-ENG-38.

This invention is directed to a superconducting tape or wire composed of alternating layers of copper and a niobium-containing superconductor such as niobium of NbTi, Nb_3Sn or Nb_3Ge. In general, each layer of the niobium-containing superconductor has a thickness in the range of about 0.05 to 1.5 times its coherence length (which for Nb_3Si is 41 A) with each copper layer having a thickness in the range of about 170 to 600 A. With the use of very thin layers of the niobium composition having a thickness within the desired range, the critical field (H/sub c/) may be increased by factors of 2 to 4. Also, the thin layers of the superconductor permit the resulting tape or wire to exhibit suitable ductility for winding on a magnet core. These compositions are also characterized by relatively high values of critical temperature and therefore will exhibit a combination of useful properties as superconductors.

30046 **Method of enhancing selective isotope desorption from metals.** Knize, R.J.; Cecchi, J.L. (to Dept. of Energy). US Patent Application 6-517,477. 26 Jul 1983. 10p. Contract AC02-76CH03073.

This invention relates generally to the field of gas desorption from metals; and, more particularly, to a method of enhancing the selective desorption of a particular isotope of a gas from metals. Enhanced selective desorption is especially useful in the operation of fusion devices.

30047 **Theoretical and experimental progress in tokamak plasma confinement.** Sigmar, D.J. (Oak Ridge National Lab., TN (USA)). pp 18-57 of Information meeting. Current aspects of fusion research. Vienna, Austria; Verlag der Oesterreichischen Akademie der Wissenschaften (1983). (In German)(CONF-8303153—).

From Current aspects of fusion engineering information meeting; Vienna, Austria (3 Mar 1983).

A review is given in six chapters on current trends and achievments of tokamak research in USA. 1. Introduction 2. A recapitulation of the tokamak principle. 3. New records for beta; a new operational mode (H-mode) in Divertor plasmas. 4. Dependence of achievable poloidal βsub(E) as well as of the energy confinement time tau sub(E) on the heating power as resulting from a) tangential neutral particle heating in the ISX-B tokamak, b) normal neutral particle heating in the TDX tokamak. 5. Report on direct current drive through Lower Hybrid Resonance radio frequency in Alcator C and in PLT. 6. First operation of TFTR D-T experiment in Princeton.

30048 **Development of imploding liner systems for the NRL LINUS Program.** Turchi, P.J.; Burton, R.L.; Cameron, J.; Cooper, A.L.; Ford, R.D.; Jenkins, D.J.; Lanham, R. (Naval Research Laboratory, Washington, DC 20375). pp 881-889 of Energy storage, compression, and switching. Nardi, V.; Bostick, W.H.; Sahlin, H. New York, NY; Plenum Publishing Corp. (1983). (CONF-751247—).

From Colloquium on thermal insulators at high temperature; Paris, France (3 Dec 1975).

This chapter reports that the basic thrust of the liner implosion research at the Naval Research Laboratory for the LINUS program has been the design, development and characterization of liner implosion techniques that have the required properties of safety, reproducibility and scalability for both near-term plasma compression experiments and eventual fusion reactor applications. Discusses early work; initial NRL LINUS activities; solid liner experiments on the 540 kJ SUZY II capacitor bank; liquid liner implosions on SUZY II; piston-driven liner implosions; and some new directions.

30049 **General principles of inertial confinement.** Haas, R.A. (Univ. of California Lawrence Livermore National Lab. Livermore, CA). pp 71-136 of Atomic and molecular physics of controlled thermonuclear fusion. Joachain, C.J.; Post, D.E. New York, NY; Plenum Publishing Corp. (1983). (CONF-820731—). Contract W-7405-ENG-48.

From North Atlantic Treaty Organization Advanced Study Institute conference on atomic and molecular processes in controlled thermonuclear research; Palermo, Italy (19 Jul 1982).

This chapter considers the target, driver and reactor aspects of the inertial confinement fusion (ICF) concept. Discusses the energetics of an inertial fusion power plant; requirements on target energy gain (thermonuclear energy released/driver input energy); driver efficiency; general principles of ICF; the relationship between target gain and driver energy; the various target and driver options; performance characteristics of laser and ion beam driven targets; the nominal performance requirements for inertial confinement fusion drivers; inertial fusion reactor concepts; and laser and ion beam driver technologies. Points out that in ICF, the reactor and driver are physically separated, leading to many novel reactor concepts. Notes that because of their ability to flexibly provide the driving conditions, lasers have been used extensively to experimentally explore the feasibility of ICF. Concludes that the successful development of inertial fusion depends on the development of several diverse technologies with regard to targets, drivers, reactor chambers, etc.

30050 **Non-fossil energy for the production of synthetic fuels from Coal I. Fusion reactor with high temperature steam electrolyzer and gasifier.** Steinberg, M. (Department of Nuclear Energy Department of Energy and Environment Brookhaven National Laboratory Upton, New York). *Alternative Energy Sources;* 6: 37-51(Dec 1980). (CONF-801210—).

From 3. Miami international conference on alternative energy sources; Miami Beach, FL, USA (15 Dec 1980).

Fusion reactors could displace a large amount of the coal needed for synthetic fuel production. A unique feature of a fusion reactor is that it can potentially supply high temperature steam in the range of 1000° to 1500°C in a continuous manner. The high temperature steam would be obtained by internal heating of a refractory containing blanket section which would absorb the neutrons from the plasma. The water process stream would absorb the heat from the refractory, producing high temperature steam. The high temperature steam could be electrolyzed in a high temperature electrolyzer (HTE) and converted in a high temperature steam gasifier (HTSG) with coal. The HTE has the advantage of producing H_2 at 50 to 70% overall thermal efficiency. The HTSG has the advantages of eliminating the need for oxygen and excess coal to provide the endothermic heat of reaction for the water gas reaction. No switching valves or heat transfer surfaces are needed. Applying the fusion reactor in combination with HTE and HTSG for conversion of coal to synthetic natural gas (SNG) and liquid gasoline the efficiency of utilization of coal could be improved from 1.6 to 3.2 times for SNG and from 1.8 to 2.4 times for liquid fuel. The major advantages of the fusion reactor HTE-HTSG system for synthetic fuels includes (1) an increase in utilization of the coal resource by a factor of 2 to 3 respectively for liquid and gas production (2) a 2-to 3-fold reduction in the environmental pollution factors which include (a) reduced mining hazards, (b) reduced release of the toxic agents, S, N and ash and (c) reduced buildup of CO_2 in the atmosphere which could lead to a catastrophic climatic "greenhouse" effect.

30051 **HYFIRE: A tokamak-high-temperature electrolysis system.** Fillo, J.A.; Benenati, R.; Horn, F.; Issacs, H.; Lazareth, O.W.; Makowitz, H.; Powell, J.R.; Steinberg, M.; Usher, J. (Department of Nuclear Energy Brookhaven National Laboratory Upton, New York). *Alternative Energy Sources;* 5: 173-184(Dec 1980). (CONF-801210—).

From 3. Miami international conference on alternative energy sources; Miami Beach, FL, USA (15 Dec 1980).

Brookhaven National Laboratory (BNL) is carrying out a comprehensive conceptual design study called HYFIRE of a commercial fusion Tokamak reactor, high-temperature electrolysis system. The study is placing particular emphasis on the adaptability of the STARFIRE power reactor to a synfuel application. The HYFIRE blanket must perform three functions: a) provide high-temperature (about 1400°C) process steam at moderate pressures (in the range of 10 to 30 atm) to the high-temperature electrolysis (HTE) units; b) provide high-temperature (about 700-800°C) heat to a thermal power cycle for generation of electricity to the HTE units; and c) breed enough tritium to sustain the D-T fuel cycle. In addition to thermal energy for the decomposition of steam into its constituents H_2 and O_2, electrical input is required. Fourteen hundred degree steam coupled with 40% power cycle efficiency results in a process efficiency (conversion of fusion energy to hydrogen chemical energy) of 50%.

30052 **Inertial fusion and energy production.** Ahlstrom, H.G. (University of California, Lawrence Livermore National Laboratory, Livermore, California). *Alternative Energy Sources;* 5: 147-152(Dec 1980). (CONF-801210—).

From 3. Miami international conference on alternative energy sources; Miami Beach, FL, USA (15 Dec 1980).

Inertial Confinement Fusion (ICF) has strong prospects of becoming a real energy option. The fuel supply is practically inexhaustible. The present paper summarizes the accomplishments of the last decade in the development of ICF technology. Although a real breakthrough is still to come, important developments have occurred both in the laser and ion beam technology, and in the reactor system design.

99 GENERAL AND MISCELLANEOUS

REFER ALSO TO CITATION(S) 28504

30053 **(ANL—84-26) Chemical Technology Division annual technical report, 1983.** (Argonne National Lab., IL (USA)). Apr 1984. Contract W-31-109-ENG-38. 187p. NTIS, PC A09/MF A01. Order Number DE84011797.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Highlights of the Chemical Technology (CMT) Division's activities during 1983 are presented. In this period, CMT conducted research and development in the following areas: (1) advanced batteries - mainly lithium alloy/metal sulfide, sodium/sulfur, and sodium/alkali nitrate for electric vehicles; (2) aqueous batteries - mainly improved lead-acid and nickel/iron for electric vehicles; (3) advanced fuel cells with molten carbonate or solid oxide electrolytes for use by electric utilities; (4) coal utilization, including the heat and seed recovery technology for coal-fired magnetohydrodynamics plants and the technology for pressurized fluidized-bed combustors; (5) methodologies for recovery of energy from municipal waste; (6) solid and liquid desiccants that allow moisture to be removed with a minimum of energy; (7) cycle technology related to proof of breeding for a light water reactor, sodium technology for liquid metal fast breeder reactors, and nuclear waste management; (8) physical chemistry of fission products under accident conditions in a light water reactor and of reactor materials (e.g., UO_2) in a liquid metal fast breeder reactor to very high temperatures; and (9) fusion technology, primarily experimental and design studies for the breeder blanket. The Division also has a program in basic energy sciences, which includes research on: (1) fluid catalysis involving carbon monoxide hydrogenation and methanol homologation; (2) the solution chemistry of transition-metal containing minerals and related strategic materials; (3) sulfur and nitrogen chemistry in the environment; (4) the thermodynamic properties of inorganic materials; and (5) the kinetics and mechanisms of fast electrochemical reactions at electrode-electrolyte interfaces. The Division continued to be the major user of the services provided by the central Analytical Chemistry Laboratory at ANL.

30054 **(DOE/OR/21400—T8) Role of national laboratories in materials science research.** Postma, H. (National Research Council, Washington, DC (USA)). 16 Apr 1984. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011659.

Portions are illegible in microfiche products.

One of the major activities is to support the national missions in fusion, fission, fossil, and solar energy, as well as energy-conserving new materials. A second major activity involves basic research in support of the technologies. There is also long-term multidisciplinary basic research, and construction and operation of major facilities. The national laboratories provide a framework for carrying out all these activities. Examples from Oak Ridge and Argonne are given. (DLC)

30055 **(ORNL—6037) Chemistry Division annual progress report for period ending January 31, 1984.** (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 225p. NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84012043.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Progress is reported in the following fields: coal chemistry, aqueous chemistry at high temperatures and pressures, geochemistry, high-temperature chemistry and thermodynamics of structural materials, chemistry of transuranium elements and compounds, separations chemistry, elecrochemistry, catalysis, chemical physics, theoretical chemistry, nuclear waste chemistry, chemistry of hazardous chemicals, and thermal energy storage.

9901 Management

30056 **(DOE/ER—0165/1) Nuclear engineering enrollment and degrees, 1983.** Sweeney, D.H.; Shirley, D.L. (Oak Ridge Associated Universities, Inc., TN (USA)). May 1984. Contract AC05-76OR00033. 76p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84010967.

This report presents data on the number of students enrolled in the fall of 1983 and the degrees awarded in academic year 1982-83 from 75 US institutions offering degree programs in nuclear engineering or in other engineering disciplines with a nuclear option sufficient to equip graduates to function as nuclear engineers. The report includes historical survey data for the last decade and provides information such as trends by degree level and program option, foreign national student participation, female and minority student participation, and placement of graduates. Also included is a listing of the universities by type of program and number of students.

30057 **(DOE/OR/00033—T62) Guide to computer-based training.** (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1984. Contract AC05-76OR00033. 108p. NTIS, PC A06/MF A01; GPO Dep. Order Number DE84012244.

The Guide is intended to (1) describe computer-based training; (2) help you analyze what role the computer might play in your training program; (4) offer you criteria for making decisions about types of systems, hardware, and software; (5) help you determine how you might obtain CBT (computer based training); (6) suggest additional resources for you to investigate; and (7) describe some experiences of DOE contractors and other federal organizations with CBT.

30058 **(DOE/OR/21354—T2) Analysis of annual assistance issues: City of Oak Ridge, Anderson, and Roane Counties, Tennessee. Final report.** Freeman, T.A.; Harvey, E.C.; Lyman, T.R.; Ousterhout, D.G. (SRI International, Menlo Park, CA (USA)). Feb 1984. Contract AC05-83OR21354. 93p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84011601.

Portions are illegible in microfiche products.

This study of community assistance issues and evaluation of local self-sufficiency efforts is designed to inform DOE prior to expiration of the current contracts in September 1984. To aid in those decisions, the report follows in three sections. Section II looks at the changing character of the Oak Ridge area, the effects of self-sufficiency efforts, and the implications of these effects for continued federal assistance. Section III sets forth macro DOE policy choices regarding community assistance and a number of implementation alternatives, including their strengths and their limitations. Section IV summarizes the issues, the policy options, and the implementation alternatives. Finally, an appendix contains additional supporting data that should be useful as DOE considers its course of action. 2 figures, 40 tables.

30059 **(DOE/TIC—3398) DOE patents available for licensing: a bibliography.** Thoeming, G.H. (ed.). (USDOE Technical Information Center, Oak Ridge, TN). Jun 1982. 234p. NTIS, PC A11/MF A01. Order Number DE82012479.

Abstracts and indexes are provided for 1344 DOE patents or patent applications concerning any aspect of energy production, conservation, and utilization. The entries are arranged by subject category as shown in the table of contents. The bibliography covers the period from January 1974 through December 1980.

30060 **(INIS-mf—8927) 60 years of the Institute for Research, Production and Application of Radioisotopes.** Chorvat, K. (ed.). (Ustav pro Vyzkum, Vyrobu a Vyuziti Radioisotopu, Prague (Czechoslovakia)). 1981. 98 p.p. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780240.

The Institute for Research, Production and Application of Radioisotopes was established in 1919. In 1980 the Institute moved to new buildings in Prague-Malesice. Its activities cover three main areas, viz.: the production of labelled compounds, sealed sources and radionuclide standards; specialized services for the whole country; research into the application of radionuclides and ionizing radiations. (Ha).

30061 (INIS-mf—8927, pp 9-17) **History and presence of Institute for Research, Production and Applications of Radioisotopes.** Hokr, I. 1981. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780240. TI84780240

In 60 years of the Institute for Research, Production and Application of Radioisotopes 1919-1979.

Current responsibilities of the Institute cover three main areas, i.e., the production, specialized services for the whole country, and research. The Institute produces ^{14}C-and ^{3}H-labelled compounds, sealed sources for industrial and medical applications including sources for radioisotope fire alarms, radioactive light sources and radionuclide standards. Services include central distribution of radioactive materials including inspection, central evaluation of personnel dosemeters, applications of tracer techniques in different fields, collection and storage of low-level wastes. Research is mostly focused on the further development of production and services provided by the Institute. In addition, it includes the study of radiation technologies and metrology of radionuclides. (Ha).

30062 (INIS-mf—8927, pp 19-28) **Scientific and technical development and international cooperation.** Chorvat, K.; Dedek, V. 1981. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780240. TI84780240

In 60 years of the Institute for Research, Production and Application of Radioisotopes 1919-1979.

A brief list is presented of research projects implemented by the Institute between 1959 and 1978, including the wide area of international cooperation, mainly with CMEA countries. (B.S.).

30063 **(LBL-PUB—426-Rev.) Guide to user facilities at the Lawrence Berkeley Laboratory.** (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012159.

Portions are illegible in microfiche products.

Lawrence Berkeley Laboratories' user facilities are described. Specific facilities include: the National Center for Electron Microscopy; the Bevalac; the SuperHILAC; the Neutral Beam Engineering Test Facility; the National Tritium Labeling Facility; the 88 inch Cyclotron; the Heavy Charged-Particle Treatment Facility; the 2.5 MeV Van de Graaff; the Sky Simulator; the Center for Computational Seismology; and the Low Background Counting Facility. (GHT)

30064 **(NP—4770255) VIK annual report 1982/83.** (Vereinigung Industrielle Kraftwirtschaft (VIK) e.V., Essen (Germany, F.R.)). 1983. 57p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84770255.

This report provides some information on the activities of the Association in the year under report. The chapters are arranged according to the following main topics: 1. pollution prevention and industrial energy economy, 2. legal aspects of energy, 3. energy economy - electric power and fuels -, 4. engineering, and 5. cooperation with its associated members and public relations.

30065 **(ORAU—222) Training the occasional trainer.** Weseman, M.; McMurphy, M. (Oak Ridge Associated Universities, Inc., TN (USA)). Dec 1983. Contract AC05-76OR00033. 141p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84011379.

Portions are illegible in microfiche products.

The purpose of this manual is to assist once-in-a-while or occasional trainers in improving their effectiveness as trainers. This manual is written for the full-time, professional trainer to use as a resource in conducting a short course (one-half to three days) for occasional instructors in the fundamentals of training. The introductory chapter discusses the need for training the occasional trainer. Each following chapter deals with an individual concept or aspect of training-methods, instructional objectives, evaluation, etc. and contains an Instructor's Guide (background information, theory, examples) and a Course guide (lecture notes, handouts, suggested activities). It is written in a modular format so that users can select only those modules, or parts of modules, that meet the specific needs of their target audience of occasional trainers. The basic philosophy of this manual is that training should be learner-oriented and should involve the learners as much as possible. This course can be presented in whole or in part depending on the needs of the audience and the time available. The complete course requires two days. A one-day course, and a half-day course are also possible.

30066 **(ORNL/TM—8923) ORNL ALPHAMA MIS programmer's manual.** Grubb, J.W.; Lovin, J.K.; Haese, R.L. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 86p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84011724.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This manual is a reference for programmers resonsible for the software maintenance of ALPHAMA. ALPHAMA is a part of the ALPHA Management Information System (MIS), which is a general-purpose MIS. The purpose of ALPHAMA is to provide the capability to make additions, deletions, or corrections to a data base. The manual also explains how to set up an ALPHA data base and the associated tables and reference files.

9902 Mathematics And Computers

REFER ALSO TO CITATION(S) 27918, 27925, 28985, 30057, 30066

30067 **(AD-A—137774/6) High performance parallel computing. Final report 1 Jan-31 Dec 82.** Browne, J.C. (Texas Univ., Austin (USA). Dept. of Computer Sciences). 31 Dec 1982. 13p. NTIS, PC A02/MF A01.

The three major research areas have been parallel structuring of computations, basic software for support of parallel computations and parallel architectures and supporting hardware. The work on parallel structuring of computations falls into three categories. First of these is parallel structuring of complete programs or applications. The example to be discussed below is a Monte Carlo simulation of particle movement. The second category is parallel formulation of specific numerical algorithms. The third topic is parallel formulations of non-numeric algorithms, in particular radix sorting. Design, development and analysis of basic software for parallel computing has received major emphasis. Basic software for support of parallel computations on reconfigurable network architectures is an almost entirely unstudied problem area. The third major area is continuing development of parallel architectures and hardware support for parallel architectures in the context of the Texas Reconfigurable Array Computer.

30068 **(AD-A—137883/5) Harmony theory: a mathematical framework for stochastic parallel processing. Technical report.** Smolensky, P. (California Univ., San Diego, La Jolla (USA). Inst. for Cognitive Science). Dec 1983. 21p. NTIS, PC A02/MF A01.

Given a set of stimuli presenting views of some environment, how can one characterize the natural modules or objects that compose the environment. Should a given set of items be encoded as a collection of instances or as a set of rules. Restricted formulations of these questions are analyzed within a new mathematical framework that describes stochastic parallel computation. An algorithm is given for simulating this computation once schemas encoding the modules of the environment have been selected. The concept of computational temperature is introduced. As this temperature is lowered, the system appears to display a dramatic tendency to coherently interpret input, even if the evidence for any particular interpretation is very weak.

30069 **(ANL—82-84-Rev.1) Logic Machine Architecture inference mechanisms: layer 2 user reference manual release 2.0.** Lusk, E.L.; Overbeek, R.A. (Argonne National Lab., IL (USA)). Apr 1984. Contract W-31-109-ENG-38. 129p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84012115.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Logic Machine Architecture (LMA) is a package of software tools for the construction of inference-based systems. This document is the reference manual for layer 2 of LMA. It contains the information necessary to write LMA-based systems at the level of layer 3. Such systems include theorem provers, reasoning components for expert systems, and customized deduction components for a variety of application systems.

30070 **(ANL—84-27) Automated reasoning system ITP.** Lusk, E.L.; Overbeek, R.A. (Argonne National Lab., IL (USA)). Apr 1984. Contract W-31-109-ENG-38. 60p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84011795.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report describes a system designed to provide a portable environment for the study of automated reasoning. The system is built on the LMA automated reasoning subroutine package. This program is not part of LMA itself but illustrates the level of inference-based system that can be constructed from the LMA package of tools. It is a clause-based reasoning system supporting a wide variety of techniques which have proven valuable over the years in a long-running automated deduction research project. In addition, it is designed to present a convenient, interactive interface to its user.

30071 **(BNL—34641) Monte Carlo simulation of the microcanonical ensemble.** Creutz, M. (Brookhaven National Lab., Upton, NY (USA)). 5 Apr 1984. Contract AC02-76CH00016. 12p. (CONF-8404119—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010880.

From Workshop on gauge theory on lattice; Argonne, IL, USA (5 Apr 1984).

Portions are illegible in microfiche products.

We consider simulating statistical systems with a random walk on a constant energy surface. This combines features of deterministic molecular dynamics techniques and conventional Monte Carlo simulations. For discrete systems the method can be programmed to run an order of magnitude faster than other approaches. It does not require high quality random numbers and may also be useful for nonequilibrium studies. 10 references.

30073 **(CONF-8404152—1) Argonne integrated heterogeneous file transfer network.** Schofield, J. (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 23p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012092.

From 25. Association for Energy Systems, Operations and Programming conference; Seattle, WA, USA (30 Apr 1984).

This presentation describes the computing environment at Argonne National Laboratory and the actions underway to imple-

ment a coherent hierarchy of computing systems connected through a heterogeneous file transfer network. A major goal of the Computing Services Division is to integrate heterogeneous computing elements incrementally into a nework, with the goal of having everything somehow connected to everything else. Using standard IBM networking protocols, we have already built a full-function computer-to-computer file transfer network of IBM and DEC VAX systems. Currently, the users on the IBM MVS and VM/CMS systems can use standard IBM commands to send files and mail to DEC VAX users and output devices, and they can receive files from the DEC VAX's as if they had been sent from other IBM systems; similarly, the DEC VAX users can use standard DEC commands to send files and mail to IBM users and output devices, and they can receive files from the IBM systems as if they had been sent from other DEC VAX systems. In fact, the VAXes can exchange files and mail among themselves via the IBM NJE-based network without the need for DECnet links between the VAXes. Because this integrated heterogeneous file transfer network uses the standard IBM peer-to-peer communications protocol, all of the Laboratory's IBM and DEC computers easily communicate with the approximately 170 other computers in the Bitnet university network. Plans call for further integration of existing HP 3000 systems and future word processing systems such as Exxon, NBI, or Wang; we believe it is vitally important to provide smooth paths into this network for users of personal desktop computers. 17 references.

30074 **(DP-MS—84-40) Getting into CAD at the Savannah River Plant.** Scoggins, W.R. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant). 1984. Contract AC09-76SR00001. 15p. (CONF-8405151—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011518.

From Computer aided engineering symposium; Wilmington, DE, USA (15 May 1984).

Portions are illegible in microfiche products.

In 1978, the Savannah River Plant (SRP) Project Department was producing approximately 1100 new drawings and 3000 revisions per year, with a force of 30 draftsmen. Design services for the Plant were increasing due to changing programs, obsolescent equipment replacements and added security requirements. This increasing workload greatly increased the engineering drafting backlog. At the same time, many draftsmen were approaching retirement age and were to be replaced with unskilled draftsman trainees. A proposal was presented to management to acquire a Computer Aided Drafting (CAD) system to produce instrument and electrical drawings which comprised 30% of the work load.

30075 **(EGG-ED—6515) Procedures for fault tree construction/reliability analysis on the CAD system - user manual.** Rhudy, J.W. (EG and G Idaho, Inc., Idaho Falls (USA)). Apr 1984. Contract AC07-76ID01570. 35p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011906.

This manual contains information concerning Fault Tree Construction on the EG and G Idaho, Inc, Computer-Aided Design System (CAD). The programs for fault tree construction prepared by EG and G at the Idaho National Engineering Laboratory are used on an Applicon CAD System which is compatible with the CYBER computer, to which the information will be transferred for analysis. The material herein is available on the CAD system in the form of printed messages on the screen. However, an effort has been made to include additional detail to these messages as well as to provide an off-system reference manual. The programs required to produce fault trees reside on the EG and G Applicon CAD System. Operators of the CAD require a short familiarization (~2 hrs) with the CAD system and its associated hardware before starting work. After an operator logs into the system and loads the start file, graphic symbols are added to create the fault tree. These symbols can then be manipulated to produce the final desired configuration before making a tape to transfer the file to the CYBER for analysis. Special care was taken to eliminate the need of memorization of commands to help the causal operator and to reduce the necessity of constant retraining on use of the CAD system.

Computer systems managers must address the need for protecting important company information and programs used to process that information by computers. Not related to the government classified category, this data is anything that could cause loss or harm to the company if altered, destroyed, or divulged. Threats specific to computer systems, such as unauthorized access to, or improper use of such data must be addressed without spending more on protective measures than is risked. Procedures are available to estimate such risks. Actions of people pose far greater threats than fire, flood or major disasters. Protective measures, therefore, emphasize preventing people from doing harm, accidentally or maliciously, by keeping out the unauthorized, tracking the activities of the authorized, and maintaining back-up copies of everything required for essential company operations.

This paper is a case study of how one DP organization applied student labor and a relational DBMS in a prototyping environment to automate much of their applications systems documentation function. The capabilities, fringe benefits and future enhancements of the tool are discussed.

30079 **(LA-UR—83-3549) Improved accuracy general remapping algorithm.** Dukowicz, J.K. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 11p. (CONF-840650—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84004320.

From 9. international conference on numerical methods in fluid dynamics; Saclay, France (25 Jun 1984).

Most numerical methods in fluid dynamics can be classified as being either Lagrangian or Eulerian. An important group of methods, however, is a combination of both. These methods generally derive from the ALE (Arbitrary-Lagrangian-Eulerian) method of Hirt et al. A computational cycle in these methods is divided into two main phases: a lagrangian phase and a rezone or remap phase (these two terms are used interchangeably). The remapping phase conservtively transfers quantities, calculated in the Lagrangian phase, from the Lagrangian mesh to some other specified mesh. For example, in a given time step the remap phase may be omitted, in which case the computation is purely Lagrangian, or the remapping may be back to the original mesh, in which case the computation is Eulerian. The remapping step, therefore, corresponds to the effect of the advection terms in Eulerian equations. It may also be viewed as a conservative interpolation procedure from one mesh to another, and so it is also useful in other more general applications, such as in adaptive mesh computations. In this paper a new method is extended to the case of a more accurate density distribution: the density distribution within a cell is allowed to be linear, while preserving the average value of density over the cell.

The orientation of this planar surface is given by the average local density gradient. Such a linear distribution, while more accurate in general, can cause undershoots or overshoots in regions of rapidly changing densities. This is avoided by placing monotonicity limits on the allowable gradients, similar to those used by Van Leer in one-dimension.

30080 **(LA-UR—84-1324) Current research in parallel microprocessing systems at Los Alamos.** Ethridge, C.D. (Los Alamos National Lab., NM (USA)). 2 May 1984. Contract W-7405-ENG-36. 6p. (CONF-8405131—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011342.

From 6. annual ideas in science and engineering exposition and symposium; Albuquerque, NM, USA (2 May 1984).

Portions are illegible in microfiche products.

The Computing and Communications Division at the Los Alamos National Laboratory has designed and is building a parallel microprocessor system (PuPS) to serve as a research tool for evaluating parallel processing of large-scale scientific codes. PuPS is an experimental architecture consisting of an orthogonal array of 20 processing elements by 32 memory elements, establishing a tightly coupled, shared-memory (16-Mbyte) machine. The hardware incorporates VLSI components, such as 16-bit microprocessors, floating-point co-processors, and dynamic random access memories. The design replaces conventional MSI/SSI circuitry with programmable array logic, logic sequencers, and logic arrays. This experimental system, which is only 1 element of the parallel processing research being done by the Laboratory's Computing and Communications Division, will enable direct comparisons of speedups of algorithms for a variety of multiprocessor architectures.

30081 **(ORNL/CSD/TM—162) MAPEDIT user's manual.** Fischer, K.N. (Oak Ridge National Lab., TN (USA)). Apr 1984. Contract AC05-84OR21400. 117p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84012045.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

MAPEDIT is an interactive computer graphics program used in conjunction with MAPPER [1] to add enhancements (e.g., lines, labels, and boxes) to a MAPPER plot. Annotation and other enhancements that would be difficult to place on a MAPPER plot before seeing it are easy to add using MAPEDIT. First MAPPER draws a plot on the screen of an interactive graphics terminal supported by MAPEDIT. Then MAPEDIT commands and the terminal's graphic input device (e.g., crosshair cursor controlled by thumbwheel or joystick) are used to edit the plot by adding enhancements to it. As these enhancements are made, the corresponding MAPPER commands needed to produce them are written in an output file. This output file may then be modified by a text editor, if desired, and run through MAPPER on any device that will give high-quality final output. The MAPEDIT program is currently installed on both the Computer Sciences and the Fusion Energy Division PDP-10 systems. It must be used with a Tektronix 4054 or Tektronix 4010-family terminal (excluding Tektronic 4006) or a terminal compatible with one of these, such as the DEC VT 100 equipped with the Retrographics VT 640 enhancement by Digital Engineering.

30082 **(PNL-SA—11565) User-oriented laboratory data entry computer system designed to reduce errors.** Peloquin, R.A. (Pacific Northwest Lab., Richland, WA (USA)). Feb 1984. Contract AC06-76RL01830. 7p. (CONF-840202—25). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011901.

From 17. midyear topical meeting of the Health Physics Society; Pasco, WA, USA (5 Feb 1984).

Data entry computer programs that focus on the user-system interface can reduce error, save time, and optimize personnel resources. Feed-back from the potential users during the task analysis and throughout the development stage should direct the formation of the computer code. Checking and verification of data, reduction of keystrokes, and in-place instructions are some of the techniques that should be utilized. These design principles and techniques were used during the development of ENTRY, a data entry computer program used to record data (e.g., sample weights, radiochemical analyses) for a long-term field and laboratory study. Extensive data must be collected each year from each of the more than 350 experimental plots used in the study. The data is entered on a MINC-11 microcomputer with two disk drives and less than eight kilobytes of usable memory. Despite the memory restriction, the program demonstrates a wide range of techniques which make it easy to use and consequently reduces the occurrence of errors.

30083 **(SAND—84-0142) Recommended practices for spline usage in CAD/CAM systems: CADCAM-007.** Fletcher, S.K. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 17p. NTIS, PC A02; 3; GPO Dep. Order Number DE84011158.

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

Sandia National Laboratories has been assigned Lead Lab responsibility for integrating CAD/CAM activities throughout the DOE Nuclear Weapons Complex (NWC) and automating exchange of product definition. Transfer of splines between CAD/CAM systems presents a special problem due to the use of different spline interpolation schemes in these systems. Automated exchange via IGES (Initial Graphics Exchange Specification, ANSI Y14.26M-1981) shows promise but does not yet provide a usable data path for NWC spline needs. Data exchange today is primarily via hard copy drawings with manual data reentry and spline recomputation. In this environment, spline problems can be minimized by following the recommended practices set forth in this report.

30084 **(SAND—84-0311) Quality Assurance (QA) procedures for computer software in Department 1510.** Fewell, M.E.; Gartling, D.K.; Korbin, C.M.; Russo, A.J.; Sisson, C.E. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1984. Contract AC04-76DP00789. 27p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84012131.

This document describes the Quality Assurance (QA) plan for Department 1510 and provides all standards, requirements and participant responsibilities for its implementation.

30085 **(UCID—20064) DEC LSI-11/HP9895A software.** Castleton, R.N. (Lawrence Livermore National Lab., CA (USA)). 20 Apr 1984. Contract W-7405-ENG-48. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012412.

There is a need to exchange MSAD data between LLNL and Monsanto Research Corporation's Mound facility in Ohio. The LLNL tester is DEC LSI-11/23 based (as is all of the analysis software), and the Mound tester is HP9835 based. Data at Mound is stored on double density, double sided, HP-formatted 8 inch floppy disks. The software documented in this report makes possible the reading of these data disks by a DEC LSI-11/23 using an HP9895A disk drive.

30086 **(UCID—30184-Rev.1) Linear Systems Analysis Program user's manual, Version 2.2 (VAX/VMS).** Herget, C.J.; Tilly, D.M. (Lawrence Livermore National Lab., CA (USA)). 20 Apr 1984. Contract W-7405-ENG-48. 77p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84012230.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The computer program LSAP (Linear Systems Analysis Program) is an interactive program with graphics capability that can be used for the analysis and design of linear control systems. Nearly all classical design tools are available, including manipulation of transfer functions and generation of root locus, time response, and frequency response plots. The program is capable of working with both continuous time systems and sampled data systems. For continuous time systems, the Laplace transform is used, and for sampled data systems, the Z-transform is used. The capability of converting from a Laplace transform to a Z-transform is provided.

30087 **(UCRL—15588) Operator split methods in the numerical solution of the finite deformation elastoplastic dynamic problem.** Pinsky, P.M.; Ortiz, M.; Taylor, R.L. (California Univ., Berkeley (USA). Dept. of Civil Engineering). May 1982. Contract W-7405-ENG-48. 41p. (UCB/SESM—82/04). NTIS, PC A03/MF A01; GPO Dep. Order Number DE84011061.

The spatial formulation of the elastoplastic dynamic problem for finite deformations is considered. A thermodynamic argument leads to an additive decomposition of the spatial rate of deformation tensor and allows an operator split of evolutionary equations of the problem into elastic and plastic parts. This operator split is taken as the basis for the definition of a global product algorithm. In the context of finite element discretization the product algorithm entails, for every time step, the solution of a nonlinear elastodynamic problem followed by the application of plastic algorithms that operate on the stresses and internal variables at the integration points and bring in the plastic constitutive equations. Suitable plastic algorithms are discussed for the cases of perfect and hardening plasticity and viscoplasticity. The proposed formalism does not depend on any notion of smoothness of the yield surface and is applicable to arbitrary convex elastic regions, with or without corners. The stability properties of the global product algorithm are shown to be identical to those of the algorithm used for the integration of the nonlinear elastodynamic problem. Numerical examples illustrate the accuracy of the method.

30088 **(UCRL—53519) Adaptive finite element grid generation and extension for elliptic problems posed on unbounded domains.** Seager, M.K. (Lawrence Livermore National Lab., CA (USA)). May 1984. Contract W-7405-ENG-48. 187p. NTIS, PC A09/MF A01; GPO Dep. Order Number DE84012134.

Thesis.

This dissertation concerns the analysis, approximation and algorithmic development for the numerical solution of a second order linear elliptic boundary value problem posed on an infinite domain in R^3. In presenting the theoretical background, using the weighted Sobolev spaces introduced by Cantor [1981] the use of different boundary conditions on truncated domains was analyzed. It was proven that, under more stringent requirements on the data, the Robin boundary condition yielded solutions on the truncated domains that converged in L^2;H^1 and energy norms to the true solution on the unbounded domain. If the domain over which the error norms are calculated is fixed or the data have even faster fall off, the convergence rate increases a full degree. These asymptotic convergence results deal with the continuous solution on the bounded domain. That is to say, discretization error for an approximate solution was not considered. 53 references.

30089 **(UCRL—89915) Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics.** O'Brien, D.W. (Lawrence Livermore National Lab., CA (USA)). Oct 1983. Contract W-7405-ENG-48. 3p. (CONF-831015—48). NTIS, PC A02; 3; GPO Dep. Order Number DE84002457.

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Paper copy only, copy does not permit microfiche production.

The topics presented at Berkeley centered on computer technologies and architecture as they effect the data-acquisition and data reduction process. Data-acquisition hardware activities were well represented with discussions of CAMAC, FASTBUS, and specialized hardware for data sorting, pipelined operations, and parallel processing. Vendors of CAMAC and FASTBUS products were present to demonstrate their systems and track new research developments and directions.

30090 **(UCRL—90392) Thinking big.** Hendrickson, C.P. (Lawrence Livermore National Lab., CA (USA)). 17 Feb 1984. Contract W-7405-ENG-48. 6p. (CONF-840458—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84007412.

From Seminar on how to manage data and information as a resource; Washington, DC, USA (9 Apr 1984).

Superconductors have long been used at the nuclear weapons laboratories as very cost-effective computational alternatives to large numbers of nuclear tests. This paper discusses the general characteristics of these supercomputers, gives an example of the environment in which these computers are placed, and indicates what future supercomputers will look like.

30091 **Iterative three-dimensional image reconstruction from tomographic projections.** Colsher, J.G. (Lawrence Livermore Lab., CA). *Computer Graphics and Image Processing;* **6**: 513-537(1977). Contract W-7405-ENG-48.

Four algorithms are adapted to perform direct three-dimensional reconstruction from projections. The algorithms considered are summation, the Algebraic Reconstruction Technique (ART), the Simultaneous Iterative Reconstruction Technique (SIRT), and the Iterative Least Squares Technique (ILST). The concept of tomographic projections is introduced and shown to greatly simplify the calculations. This work represents the first time that these iterative algorithms have been applied to projections other than coaxial. The methods developed can be of benefit in electron microscopy, holographic interferometry, and nuclear medicine. To evaluate these methods an experimental investigation is carried out using computer-generated synthetic images. Using SIRT, direct 3-D reconstruction is shown to be superior to serial 2-D reconstruction from coaxial projections when the range of viewing angles is limited. The number of projections required for adequate reconstruction is also considered. Finally, the performance of the algorithms is compared with respect to overall similarity of the reconstruction to the original test object, effects of noise, and computer time and memory requirements.

30092 **(LA-tr—82-26) Mathematical statistics: multi-variate distributions with given boundaries.** Gumbel, E.J. Translated from *Comptes Rendus Hebdomadaires des Seances de l'Academie des Sciences ;* **246**: No. 19, 2717-2720(1958). Contract W-7405-ENG-36. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE83000343. DE83000343

Portions are illegible in microfiche products; includes original text.

By letting F(x) and G(y) be two probability functions and f(x) and g(y) the corresponding density functions, it has been shown that there are two-variate probability functions H(x,y) such that F(x) and G(y) are the marginal probabilities. A solution is obtained, and an analytical example is given. (WHK)

30093 **(GAO/RCED—84-129) Department of Energy's activities to limit distribution of certain unclassified scientific and technical information.** (General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.). 30 Mar 1984. 26p. US General Accounting Office, PO Box 6015, Gaithersburg, MD 20760. Order Number DE84901089.

Report to The Chairman, Committee on Energy and Commerce, House of Representatives.

The Department of Energy is a major publisher of unclassified scientific and technical information. The Technical Information Center, the Department's repository, sends most of its unclassified information to the National Technical Information Service, which sells it to the public. However, some of the information is limited to distribution within the federal government because it involves nuclear safety matters; securing foreign research results; or protecting patentable, proprietary, and other information. This report describes the Department's procedures and controls for determining, distributing, and accessing unclassified information that is not made available to the public.

30094 **(ORNL/TM—8928) Review of existing environmental and natural resource data bases.** Olson, R.J. (Oak Ridge National Lab., TN (USA)). May 1984. Contract AC05-84OR21400. 75p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84012039.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Environmental Sciences Division Publication No. 2297.

Environmental and natural resource (E and NR) data are reviewed in terms of existing data bases, funding status of data bases, and long-term data base maintenance. Computerized E and NR data files and inventories of data files are described. The review is based on mail surveys, telephone contacts, and the 1983 Integrated Data Users Workshop, Data Resources in a Time of Fiscal Constraints. Twenty-four federal agency clearinghouse, referral, or data centers were identified that maintain inventories of E and NR machine-readable data files. One of the more extensive sources that can be searched to help locate available computerized data is the National Oceanic and Atmospheric Administrations National Environmental Data Referral Service (NEDRES). The NEDRES contains descriptions of over 13,500 data files. Over 130 national, computerized E and NR data bases are identified by title, geographic scale, time period, agency, and contact person. These represent a significant proportion of those files available for national or regional environmental studies. Five large integrated data base systems containing E and NR data are described. These systems provide selected data stored in compatible spatial and temporal formats with associated analysis and mapping capabilities to conduct integrated studies. The systems included DATAGRAF, GEMS, GEOECOLOGY, SEEDIS, and UPGRADE. Two systems, GEOECOLOGY and UPGRADE, are currently inactive due to funding cuts. There has been a significant reduction in the overall funding of statistical data collection within the federal government. The long-term maintenance of E and NR data includes updating files, documenting data and procedures, data base management, quality control, enhancing software/hardware capabilities, and other tasks to ensure that data will be available for analysis needs.

30095 **Fundamental understanding of matter: An engineering viewpoint.** Cullingford, H.S.; Cort, G.E. (Design Engineering Division Los Alamos National Laboratory Los Alamos, New Mexico). *Alternative Energy Sources;* **5**: 185-194(Dec 1980). (CONF-801210—).

From 3. Miami international conference on alternative energy sources; Miami Beach, FL, USA (15 Dec 1980).

Fundamental understanding of matter is a continuous process that should produce physical data for use by engineers and scientists in their work. Lack of fundamental property data in any engineering endeavor cannot be mitigated by theoretical work that is not confirmed by physical experiments. An engineering viewpoint will be presented to justify the need for understanding of matter. Examples will be given in the energy engineering field to outline the importance of our further understanding of material and fluid properties and behavior. Cases will be cited to show the effects of various data bases in energy, mass, and momentum transfer. The status of fundamental data sources will be discussed in terms of data centers, new areas of engineering, and the progress in measurement techniques. Conclusions and recommendations will be outlined to improve the current situation faced by engineers in carrying out their work.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Hadrons from relativistic quarks and spin effects in high-energy processes at high Q^2, 9:29630 (R;SU)

Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet 1 - Mathematik und Physik
Precision measurement of the asymmetry coefficient in the β-γ-angular correlation in ^{24}Na, 9:29740 (R;DE;In German)

ESG, Inc., Atlanta, GA (USA)
Analysis of field test data from domestic solar water heaters in the southern United States, period through March, 1983, 9:28145 (R;US)

European Committee for Future Accelerators
Experimentation at HERA, 9:29585 (R;DE)

European Organization for Nuclear Research, Geneva (Switzerland)
CERN school of computing 1982. Proceedings, 9:30072 (R;CH)
Making electron beams for the SLC linac, 9:29108 (R;US)

Everglades National Park, Homestead, FL (USA). South Florida Research Center
Status of exotic woody species in big cypress national preserve. Technical report, 9:29255 (R;US)

Exide Management and Technology Co., Yardley, PA (USA)
Testing, data analysis and engineering services on lead-acid load leveling batteries, 9:28485 (R;US)

Exxon Nuclear Co., Inc., Richland, WA (USA)
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)

Exxon Research and Engineering Co., Florham Park, NJ (USA)
EDS coal liquefaction process development: Phase V. Quarterly technical progress report, October 1-December 31, 1983, 9:27720 (R;US)
Slurry drying of coal in the EDS process, 9:27718 (R;US)

F

Faucett (Jack) Associates, Inc., Chevy Chase, MD (USA)
Alternative work schedules energy conservation potential. Task II report, 9:28501 (R;US)

Federal Aviation Administration, Washington, DC (USA). Office of Environment and Energy
U.S. Energy: aviation perspective, 9:28539 (R;US)
Fermi National Accelerator Lab., Batavia, IL (USA)
Anti p-p collider group, 9:29112 (R;US)
Circuit board routing attachment for Fermilab Gerber plotter, 9:29044 (R;US)
Consecutive quenches and the safety leads, 9:29097 (R;US)
EPICS personal computer evaluation, 9:30076 (R;US)
Fermilab Research Program Workbook, 9:29095 (R;US)
Main ring bunch narrowing for anti p production without rf counterphasing, 9:29068 (R;US)
Measurements of radiation quality factors using a recombination chamber, 9:29125 (R;US)
New particles and interactions, 9:29609 (R;US)
Fish and Wildlife Service, Kearneysville, WV (USA). Eastern Energy and Land Use Team
Liming of acidified waters: issues and research - a report of the international liming workshop, 9:29296 (R;US)
Rocky Mountain acidification study, 9:29259 (R;US)
Florida Energy Research and Development Task Force, Tallahassee (USA)
Florida energy research and development index, 9:28517 (R;US)
Florida Univ., Gainesville (USA). Space Astronomy Lab.
Shuttle flight test of an advanced gamma-ray detection system. Final scientific report 1 Oct 82-31 Mar 83, 9:29115 (R;US)
Fluor Engineers and Constructors, Inc., Houston, TX (USA)
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)
Fluor Engineers, Inc., Irvine, CA (USA)
Cost and performance for commercial applications of Texaco-based gasification/combined-cycle plants. Volume 1. Summary and discussion of results. Final report, 9:27770 (R;US)
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Foersvarets Forskningsanstalt, Sundbyberg (Sweden)
Att rapportera stralningsmaetdata (reporting of indication data), 9:29311 (R;US)
Microexplosions in boreholes (mikroexplosioner i borrhael), 9:29161 (R;US)
Soviet programme for peace and the West European peace movements, 9:28528 (R;US)
Forest Service, Berkeley, CA (USA). Pacific Southwest Forest and Range Experiment Station
Five southern California oaks: identification and postfire management. Forest service general technical report (final), 9:29254 (R;US)
Forest Service, Portland, OR (USA). Pacific Northwest Forest and Range Experiment Station
California forest industry: wood consumption and characteristics, 1972. Forest service resource bulletin, 9:28076 (R;US)
Foster-Miller Associates, Inc., Waltham, MA (USA). Engineering Systems Group
Longwall mining dust control. Technical progress report No. 26, September 1-30, 1983, 9:27812 (R;US)
Fox (Jerry V.) Consulting Service Co., Albuquerque, NM (USA)
Thermochemical energy transport systems study, 9:28190 (R;US)
Franklin Research Center, Philadelphia, PA (USA)
Description of six representative thermal energy storage installations, 9:28476 (R;US)
Failure evaluation of General Electric SB-1 and SB-9 reactor mode switches, 9:28270 (R;US)
PCB removal from transformers. Final report, 9:29258 (R;US)

G

GA Technologies, Inc., San Diego, CA (USA)
CASMO: a computer program to calculate spent fuel and high-level waste transportation mileage and costs, 9:27918 (R;US)
Conceptual design and cost of a superconducting magnetic energy storage plant. Final report, 9:28473 (R;US)
Electron cyclotron heating experiments on Doublet III, 9:29929 (R;US)
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Monitored retrievable storage conceptual studies: tunnel-rack, 9:27919 (R;US)
Plasma diffusion in an ergotic magnetic limiter, 9:29930 (R;US)
Reliability analysis of the tunnel rack and dry well monitored retrievable storage concepts, 9:27917 (R;US)
Safety evaluation of tunnel rack and dry well monitored retrievable storage concepts, 9:27979 (R;US)
GCA Corp., Chapel Hill, NC (USA). GCA Technology Div.
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
General Accounting Office, Washington, DC (USA). National Security and International Affairs Div.
Administration knowledge of economic costs of foreign policy export controls, 9:28503 (R;US)
General Accounting Office, Washington, DC (USA). Office of the Comptroller General
DOE's allocation of costs for uranium enrichment services, 9:28522 (R;US)
Status of the Great Plains coal gasification project, 9:27837 (R;US)
General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.
Department of Energy's activities to limit distribution of certain unclassified scientific and technical information, 9:30093 (R;US)
Disconnection of natural gas service to residential customers, 9:27878 (R;US)
DOE's defederalization of the Laramie and Grand Forks Energy Technology Centers, 9:28489 (R;US)
Energy Information Administration needs to strenghten its computer systems development procedures, 9:28490 (R;US)
Impact of international cooperation in DOE's magnetic confinement fusion program, 9:28523 (R;US)
Long-term plan is needed to guide DOE and multiprogram laboratory research and development activities, 9:28516 (R;US)
Lost DOE sales to the secondary enriched uranium market have resulted in reduced revenues, 9:27897 (R;US)
Natural gas price increases in Kansas City, 9:27879 (R;US)
US Synthetic Fuels Corporation's contracting with individual consultants, 9:28491 (R;US)
General Electric Co., Cincinnati, OH (USA). Nuclear Systems Programs
T-111 rankine system corrosion test loop. Volume II, 9:28327 (R;US)
General Electric Co., Philadelphia, PA (USA). Advanced Energy Programs Dept.
Stirling engine applications study. Final report Jan-Dec 82, 9:29056 (R;US)
General Electric Co., Richland, WA (USA). Hanford Atomic Products Operation
Nuclear materials control in research and test reactor operations, 9:27989 (R;US)
General Electric Co., San Jose, CA (USA). Nuclear Fuel and Special Projects Div.
Nuclear design and core operation for the first irradiation cycle of the large-scale zirconium barrier fuel demonstration at Quad Cities 2, 9:28261 (R;US)
General Electric Co., Schenectady, NY (USA). Advanced Energy Programs Dept.
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, May 1, 1982-July 31, 1982, 9:28566 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1982-October 31, 1982, 9:28567 (R;US)
General Electric Co., Schenectady, NY (USA). Advanced Reactor Systems Dept.
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
General Electric Co., Schenectady, NY (USA). Energy Systems Programs Dept.
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1981-October 31, 1981, 9:28564 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, November 1, 1981-January 31, 1982, 9:28565 (R;US)
General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.
Control system for glassing hot presses, 9:28005 (R;US)

General Electric Co., Sunnyvale, CA (USA)
High Temperature Gas-Cooled Reactor Program. Modular HTGR systems design and cost summary, 9:28292 (R;US)
General Motors Corp., Indianapolis, IN (USA). Detroit Diesel Allison Div.
Exploratory development of reduced length turbo-propulsion combustion systems. Part II. Component design and development. Technical report 1 Jan 68-30 Sep 70, 9:28697 (R;US)
General Physics Corp., Chattanooga, TN (USA)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Geological Survey, Denver, CO (USA)
Bibliography of reports by US Geological Survey personnel on studies of underground nuclear test sites and on waste management studies at the Nevada Test Site and the Waste Isolation Pilot Plant site, New Mexico, January 1 to December 31, 1982, 9:27960 (R;US)
Inversion results of time-domain electromagnetic soundings near Medicine Lake, California, geothermal area, 9:28224 (R;US)
Tritium concentrations measured in samples of precipitation and streams in 1963 and 1964, 9:29247 (R;US)
Geological Survey, Denver, CO (USA). Water Resources Div.
Regional hydrology of the Green River-Moab area, northwestern Paradox Basin, Utah, 9:27959 (R;US)
Geological Survey, Menlo Park, CA (USA)
Catalog of earthquakes in Southern Alaska, 9:29526 (R;US)
Thermal data from well GD-1, Gibson dome, Paradox Valley, Utah, 9:28225 (R;US)
Geological Survey, Missoula, MT (USA)
Assessment of undiscovered conventionally recoverable petroleum resources of Northwestern, Central, and Northeastern Africa (including Morocco, northern and western Algeria, northwestern Tunisia, Mauritania, Mali, Niger, eastern Nigeria, Chad, Central African Republic, Sudan, Ethiopia, Somalia, and southeastern Egypt), 9:27843 (R;US)
Georgetown Univ., Washington, DC (USA)
Alternative work schedules energy conservation potential. Task II report, 9:28501 (R;US)
Georgia Health Planning and Development Agency, Atlanta (USA)
Report and recommendtions of the nuclear magnetic resonance advisory committee, Georgia Statewide Health Coordinating Council, 9:29383 (R;US)
Georgia Univ., Athens (USA). Research Foundation
Environmental stress mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 9:29320 (R;US)
Gesellschaft fuer Reaktorsicherheit m.b.H. (GRS), Koeln (Germany, F.R.)
Evaluation of the reports on the status of quality assurance systems in the power plants. Pt. 1, annex, pt. 2, 9:28393 (R;DE;In German)
Probabilistic safety and design goals, 9:28392 (R;DE;In German)
Giessen Univ. (Germany, F.R.). Fachbereich Humanmedizin
Quantitative autoradiography of ^{14}C-D-glucose metabolism of normal and traumatized rat brain using micro-absorption photometry, 9:29407 (R;DE;In German)
Gilbert/Commonwealth, Reading, PA (USA)
Licensing requirements for backfit incinerators at commercial nuclear power plants, 9:27940 (R;US)
GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)
Decommissioning of the nuclear merchant ship OTTO HAHN, 9:28391 (R;DE;In German)
dpa calculations for neutron irradiated amorphous $Fe_{40}Ni_{40}B_{20}$ ribbons, 9:28768 (R;DE;In German)
Inductively coupled argon plasma torch for trace element analysis of heavy metals in suspended particles and sediments, 9:28861 (R;DE;In German)
Influence of sea water pretreatment and flow velocity on the corrosion behaviour of some modified aluminium alloys in North Sea water, 9:28769 (R;DE)
Mathematical simualtion model for environmental transport processes in tidal rivers and estuaries, 9:29297 (R;DE)
Meteorological investigations at the wind test site Pellworm, 9:29187 (R;DE)
Parametrization of turbulent diffusion in the atmosphere using turbulent energy equation(s), 9:29209 (R;DE;In German)
Goettingen Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet
Spherically symmetric hydrodynamic model calculations on the evolution of interstellar matter and on stellar evolution in the cove of spiral-galaxies, 9:29535 (R;DE;In German)
Studies on the electron capture decay of ^{146}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies, 9:29764 (R;DE;In German)
Golder Associates, Inc., Bellevue, WA (USA)
Identification of characteristics which influence repository design domal salt, Task 1. Final report, 9:27944 (R;US)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow
Nuclear constants, 9:29688 (R;SU)
Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)
Calculation of the heavy ion Saclay tandem post accelerator beams, 9:29067 (R;FR)
Great Plains Gasification Associates, Detroit, MI (USA)
Great Plains Coal Gasification Project. Technical quarterly report, 1st quarter, 1984, 9:27723 (R;US)
Grenoble-1 Univ., 38 (France)
Internal friction of magnesium from 0.8K; effect of electron irradiation, 9:28732 (R;FR;In French)
Temperature records in Antarctica over the last century as deduced from isotopic data, 9:29517 (R;FR;In French and English)
500-year isotope record in James Ross: Island snow (Antarctic peninsula), 9:29515 (R;FR;In French; English)
GTE Products Corp., Towanda, PA (USA). Chemical and Metallurgical Div.
Technology acceleration program for the GTE ceramic high-temperature recuperator. Final report, 9:28672 (R;US)

H

Hamburg Univ. (Germany, F.R.). Fachbereich Chemie
Investigations on application of neutron activation analysis within the scope of an analytical 'Verbundverfahren' (integrated method) for the determination of trace elements in sea water, 9:28876 (R;DE;In German)
Hamburg Univ. (Germany, F.R.). Fachbereich Physik
Inductively coupled argon plasma torch for trace element analysis of heavy metals in suspended particles and sediments, 9:28861 (R;DE;In German)
Parametrization of turbulent diffusion in the atmosphere using turbulent energy equation(s), 9:29209 (R;DE;In German)
Hanford Engineering Development Lab., Richland, WA (USA)
Automated refueling inventory control system at FFTF, 9:28301 (R;US)
Damage analysis and fundamental studies. Quarterly progress report, July-September 1983, 9:28746 (R;US)
Damping in LMFBR pipe systems, 9:28302 (R;US)
Design spectra development considering short time histories, 9:28419 (R;US)
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - microstructure development, 9:28770 (R;US)
Experience with oxide fuel for advanced reactors, 9:28303 (R;US)
Fundamentals of computer security, 9:30077 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)
Material open test assembly processing at the FFTF's IEM cell, 9:28388 (R;US)
Model describing the compositional dependence of void nucleation in irradiated Fe-Ni-Cr alloys, 9:28771 (R;US)
Nuclear fuel and cladding transient testing, 9:27901 (R;US)
Radionuclide release from PWR spent fuel specimens with induced cladding defects, 9:27920 (R;US)
Hannover Univ. (Germany, F.R.). Fakultaet fuer Maschinenwesen
Investigations of post-dryout heat transfer in case of vertical and horizontal pipe flow, 9:29014 (R;DE;In German)
Phase separation and pressure drop of two-phase flow in vertical manifolds, 9:29013 (R;DE;In German)

Hannover Univ. (Germany, F.R.). Fakultaet fuer Mathematik und Naturwissenschaften
Reactional studies on the formation of protein from cellulose waste, 9:29400 (R;DE;In German)
Harrison and Associates, Engineers, Inc., Denver, CO (USA)
Task 6 - field monitoring and evaluation of MRCP resource application. Technical progress report No. 47, 9:27813 (R;US)
Harry Diamond Labs., Washington, DC (USA)
Nonlinear dynamic polarization force on a relativistic test particle in a nonequilibrium beam-plasma system. Technical report, 9:29919 (R;US)
Hart (Fred C.) Associates, Inc., Washington, DC (USA)
Commercial potential of wood gasification and its application in New York state. Final report, 9:28032 (R;US)
Harvard Medical School, Boston, MA (USA)
Development of the Osmium-191->Iridium-191m radionuclide generator. Annual report, 9:29381 (R;US)

Multiple uses of solar air in ethanol production. Summary report, 9:28182 (R;US)

JBF Scientific Corp., Wilmington, MA (USA)
Response of crude oil slicks to dispersant treatment at sea, 1978 tests. Final report, Jan 78-Dec 80, 9:27870 (R;US)
Response of crude oil slicks to dispersant treatment at sea, 1979 tests. Final report, Jan 79-Dec 80, 9:27871 (R;US)

Jefferson County Schools, Charles Town, WV (USA)
Page Jackson solar school, Charles Town, West Virginia. Final technical report, 9:28160 (R;US)

Jet Propulsion Lab., Pasadena, CA (USA)
Dual arm master controller concept: consolidated fuel reprocessing program, 9:27908 (R;US)
Laser-assisted solar cell metallization processing. Quarterly report, December 13, 1983-March 12, 1984, 9:28072 (R;US)
Mechanisms limiting performance in polycrystalline silicon solar cells, 9:28068 (R;US)
Mechanisms limiting the performance of large grain polycrystalline silicon solar cells, 9:28069 (R;US)
Performance of compact hydrogen masers, 9:28997 (R;US)

Johns Hopkins Univ., Laurel, MD (USA). Applied Physics Lab.
Avoidance responses of estuarine fish to sulfur dioxide. Final report, 9:29498 (R;US)
Ocean thermal energy: status and prospects, 9:28133 (R;US)
Ocean thermal energy conversion: an alternate source for ammonia, 9:28136 (R;US)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation
Hamiltonian structure U(p,q) of nonlinear Schroedinger equation with nonvanishing boundary equations, 9:29906 (R;XJ;In Russian)
Structure of matrices in the method of boundary integral equations for the Laplace operator, 9:29671 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
Electromagnetic radiation during the flight of relativistic particles through a small section of the force field, 9:29670 (R;XJ;In Russian)
Quark-parton structure functions of nuclei, 9:29823 (R;XJ)
Relitivistic kinematics in "observable" variables, 9:29905 (R;XJ;In Russian)
Study on the inclusive charged particle characteristics in jets in πp p interactions at 40 GeV/c, 9:29604 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Direct calculation of the probabilities of magnetic dipole transitions for the three-valent rare earth ions in the crystalline electric field with hexagonal symmetry, 9:28914 (R;XJ;In Russian)
Investigation of the thin magnetized film transmission in ultracold neutron permanent flow, 9:29872 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Antiproton interaction with ^{4}He as a test of GUT cosmology, 9:29541 (R;XJ)
Interpolation by Pade approximants, 9:29669 (R;XJ)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics
Calculation of two-center Coulomb scattering phases with the use of asymptotic expansions for irregular Coulomb spheroidal c-type functions, 9:29687 (R;XJ;In Russian)
Coalescence model apd the Pauli quenching in high-energy heavy-ion collisions, 9:29822 (R;XJ)
Interacting vector boson model of collective nuclear states. Tensorial structure of the Hamiltonian, 9:29824 (R;XJ)
Magnetostriction of a quark bag and hadron polarizability, 9:29633 (R;XJ;In Russian)
Some specific properties of scattering on solitons in the model of current-current interaction. Soliton form factor in the kinematic region of t in the range of [0,4m^2] momenta, 9:29672 (R;XJ;In Russian)
Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator, 9:29917 (R;XJ)
Why different forms of the light cone expansion, 9:29668 (R;XJ)

Jorgenson (Dale W.) Associates, Cambridge, MA (USA)
Econometrics and data of the 9 sector Dynamic General Equilibrium Model. Volume III. Final report , 9:28495 (R;US)
Nine sector Dynamic General Equilibrium Model: specification and structure. Volume II. Final report , 9:28494 (R;US)
Overview of the 9 sector Dynamic General Equilibrium Model. Volume I. Final report , 9:28493 (R;US)
Role of energy in productivity growth. Final report, 9:28499 (R;US)
Users guide to simulation with 9DGEM on the EIA/EDS computer. Volume IV. Final report, 9:28496 (R;US)

JRB Associates, Inc., McLean, VA (USA)
Reference manual, background materials for the conus volumes, 9:29167 (R;US)
JWK International Corp., Annandale, VA (USA)
Preliminary working paper: satellite power system and lesser developed countries, 9:28092 (R;US)

K

Kahl (Dennis), Schuyler, NE (USA)
Vertical solar wall collector and cover. Final project report, December 1983, 9:28157 (R;US)
Kaiser Foundation Research Inst., Oakland, CA (USA). Dept. of Medical Methods Research
Malignant melanoma in the Kaiser Foundation health plan of northern California: a comparison of incidence and measures of health care utilization between the Lawrence Livermore National Laboratory and surrounding health plan groups, 9:29416 (R;US)
Kaman Tempo, Albuquerque, NM (USA)
Analysis plan for 1985 large-scale tests. Technical report, 9:29158 (R;US)
Kaman Tempo, Santa Barbara, CA (USA)
Operation dominic I-1962. Technical report, 9:29169 (R;US)
Operation hardtack I-1958. Technical report, 9:29168 (R;US)
Kansas City, City of, MO (USA). Public Works Dept.
Electric and hybrid vehicle demonstration project. Final report, 9:28713 (R;US)
Karlsruhe Univ. (T.H.) (Germany, F.R.)
Investigations of the preparation and properties of 'new' Si-Mn sintered steels, 9:28787 (R;DE;In German)

ORNL ALPHAMA MIS programmer's manual, 9:30066 (R;US)
ORNL projects for the NRC Office of Nuclear Regulatory Research. April 1984 monthly highlights, 9:28407 (R;US)
Parameters affecting air infiltration and air tightness in thirty-one east Tennessee homes, 9:28571 (R;US)
Particle contamination in gas-insulated systems: new control methods and optimum SF_6/N_2 mixtures, 9:28828 (R;US)
Perspective of the corrosive behavior of lithium and sodium, 9:28735 (R;US)
Physics of ion sputtering, 9:29554 (R;US)
Pressure-dependent electron attachment and breakdown strengths of unitary gases, and synergism of binary gas mixtures: a relationship, 9:29552 (R;US)
Problem definition study of dimethyl sulfoxide (DMSO) and interactive health effects with other chemicals. Final report, 9:29495 (R;US)
Problem definition study on emission by-product hazards from diesel engines for confined space army workplaces. Final report, 9:29469 (R;US)
Projectile fission in ^{58}Ni-induced reactions at 15.3 MeV/u, 9:29746 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Report to the ^{238}U discrepancy task force on SIOB fits to the ORNL, CBNM, and JAERI transmission data, 9:29875 (R;US)
Residential conservation service: model audit manual multifamily audit procedure, 9:28587 (R;US)
Resonance ionization spectroscopy of argon, krypton, and xenon using vacuum ultraviolet light, 9:29558 (R;US)
Review of existing environmental and natural resource data bases, 9:30094 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Siting energy projects: the need to consider cumulative impacts, 9:28508 (R;US)
Small-angle neutron scattering study of the decomposition of Fe-28Cr-10.5Co, 9:28743 (R;US)
Stochastic model for estimation of environmental density, 9:29252 (R;US)
Synthesis of submicron TiB_2 powders (1), 9:28802 (R;US)
Testimony presented to the Massachusetts Department of Public Health, March 19, 1984, Jamaica Plain, Massachusetts, 9:29466 (R;US)
Theory of four-wave mixing for vuv generation, 9:28999 (R;US)
Thermal energy storage program annual operating plan FY 1984, 9:28477 (R;US)
Thickness of Knox Group overburden on Central Chestnut Ridge, Oak Ridge Reservation, 9:27947 (R;US)
Transport properties and dielectric strengths of gas mixtures for use in diffuse discharge opening switches, 9:29043 (R;US)
Worldwide organic soil carbon and nitrogen data, 9:29260 (R;US)

Oak Ridge Y-12 Plant, TN (USA)
Ultrasonic determination of grain size in uranium, 9:28795 (R;US)
User's guide to Sphere and Plate Interactive Display Routine (SPIDR), 9:29032 (R;US)

Odin Associates, Cambridge, IA (USA)
Development and testing of corn cob gasifer. Final report, 9:28073 (R;US)

Office of Radiation Programs, Washington, DC (USA)
Prediction parameters of radionuclide retention at low-level radioactive waste sites, 9:27973 (R;US)

Ohio State Univ., Columbus (USA). Dept. of Civil Engineering
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)

Oklahoma State Univ., Stillwater (USA). School of Chemical Engineering
Heat exchanger evaluation for the Ocean Thermal Energy Conversion program. Final report, 9:28135 (R;US)
Olsson Associates, Lincoln, NE (USA)
Cogeneration for existing alfalfa processing, 9:28673 (R;US)
Ontario Ministry of Energy, Toronto (Canada)
Response of the Government of Ontario to the final report of the Royal Commission on Electric Power Planning, 9:28554 (R;CA)
Ontario Public Interest Research Group, Guelph (Canada)
Exporting apocalypse: CANDU reactors and nuclear proliferation, 9:28294 (R;CA)
Optical Coating Lab., Inc., Santa Rosa, CA (USA)
Recent damage results for antireflection coatings at 355 nm, 9:28839 (R;US)
Oregon State Univ., Corvallis (USA). Dept. of Atmospheric Science
Regional Wind Energy Assessment Program progress report, October 1982-September 1983, 9:28234 (R;US)
Regional Wind Energy Assessment Program progress report, October 1982-September 1983. Appendix. Wind statistics summaries, 9:28235 (R;US)
Owens-Illinois, Inc., Toledo, OH (USA)
Investigation of the nature of semisynthetic esterases. Progress report, September 15, 1981-April 15, 1984, 9:29321 (R;US)

P

Pacific Northwest Lab., Richland, WA (USA)
Analysis of uranium urinalysis and in vivo measurement results from eleven participating uranium mills, 9:27980 (R;US)
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials, 9:27791 (R;US)
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
Automated program for the acquisition of tank calibration data, 9:27997 (R;US)
Characterization of industrial process waste heat and input heat streams, 9:28685 (R;US)
Chemical analysis and biological testing of materials from the EDS coal liquefaction process: a status report, 9:27778 (R;US)
Chemical and toxicological characterization of organic constituents in fluidized-bed and pulverized coal combustion: a topical report, 9:27832 (R;US)
Chemical migration by contact metamorphism between pegmatite/country rocks: natural analogs for radionuclides migration, 9:27975 (R;US)
COBRA/TRAC simulation of semiscale S-UT-5 test, 9:28448 (R;US)
Comparison of analytical charge-form and equilibrium thermodynamic speciation of certain radionuclides, 9:29303 (R;US)
Computer simulation of time-of-event counting data for measurement of ultra low levels of radioactivity, 9:29245 (R;US)
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
DOE's biomass thermochemical conversion program: current research status and prospects for technology transfer, 9:28036 (R;US)
Economic analysis of waste management alternatives for reprocessing wastes, 9:27951 (R;US)
Environmental assisted fracture of cast and wrought mild steels in brine, 9:28791 (R;US)
Environmental surveillance at Hanford for CY 1983, 9:29244 (R;US)
Evaluation of iron-base materials for waste package containers in a salt repository, 9:27950 (R;US)
Evaluation of manual ultrasonic inspection of cast stainless steel piping, 9:29030 (R;US)
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
Impacts of acid deposition on regional economic activity, 9:28510 (R;US)
Improved field experimental designs and quantitative evaluation of aquatic ecosystems, 9:29289 (R;US)
Large-volume ultralow background germanium-germanium coincidence/anticoincidence gamma-ray spectrometer, 9:29135 (R;US)
Measurement of turbulent wind velocities using a rotating boom apparatus, 9:28242 (R;US)
Mitigative techniques and analysis of generic site conditions for ground-water contamination associated with severe accidents, 9:28446 (R;US)
Monitored Retrievable Storage Program: a mid-term report, 9:27953 (R;US)
Notes on home-type solar hot water economics, 9:28127 (R;US)
Nuclear fuel cycle risk assessment: program summary through Fiscal Year 1983, 9:27982 (R;US)
Nuclear fuel cycle risk assessment: review and evaluation of existing records, 9:27981 (R;US)
Optical coating materials for the ultraviolet - selection and characterization, 9:29004 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)
Overview of wind turbine siting considerations, 9:28243 (R;US)
Pacific Northwest Laboratory annual report for 1983 to the DOE Office of Energy Research. Part 2. Ecological sciences, 9:29274 (R;US)
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Radioactive emissions and radiation exposure from US Department of Energy operations, 9:27983 (R;US)
Review of maintenance personnel practices at nuclear power plants, 9:28271 (R;US)
Review of studies of research opportunities in energy conservation, 9:28684 (R;US)
Testing and performance of the Pacific Northwest Laboratory 6-kg retort, 9:27886 (R;US)
Thermochemical gasification of high-moisture biomass feedstocks, 9:28037 (R;US)
Uncertainty assessment for acid deposition, 9:29224 (R;US)
United States average wind power by season, 9:28236 (R;US)
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
Use of natural radionuclides to predict the behavior of radwaste radionuclides in far-field aquifers, 9:27974 (R;US)
Usefulness of the lipid index for biouptake studies with Daphnia magna, 9:29499 (R;US)
User-oriented laboratory data entry computer system designed to reduce errors, 9:30082 (R;US)
Utilization of a ^{252}Cf-^{235}U fueled subcritical multiplier for neutron activation analysis. Rev., 9:28881 (R;US)
Worldwide energy resource distribution estimates, 9:28237 (R;US)
PAR Enterprises, Inc., Fairfax, VA (USA)
Technology acceleration program for the GTE ceramic high-temperature recuperator. Final report, 9:28672 (R;US)
Paris-6 Univ., 75 (France)
Saturne II synchroton injector parameters operation and control: computerization and optimization, 9:29098 (R;FR;In French)
Peat, Marwick, Mitchell and Co., Washington, DC (USA)
Alternative work schedules energy conservation potential. Task II report, 9:28501 (R;US)
PEDCo-Environmental, Inc., Cincinnati, OH (USA)
Evaluation of the feasibility of incinerating hazardous waste in high-temperature industrial processes. Final report, 9:28681 (R;US)
Utility FGD survey, July 1982-March 1983. Volume 1. Categorical summaries of FGD systems, 9:27797 (R;US)
Utility FGD survey, July 1982-March 1983. Volume 2. Design and performance data for operational FGD systems, 9:27798 (R;US)
Pennsylvania State Univ., University Park (USA). Dept. of Chemical Engineering
Crystallite size and support effects on CO hydrogenation reactions. Final progress report, January 1, 1982-August 30, 1984, 9:28027 (R;US)
Pennsylvania State Univ., University Park (USA). Dept. of Chemistry
Instrumental methods of analysis of sulfur compounds in synfuel process streams. Quarterly technical progress report, January-March 1984, 9:27785 (R;US)

Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)

Pennsylvania State Univ., University Park (USA). Dept. of Materials Science and Engineering
Heat transfer, fluid flow and element vaporization in laser welding. Progress report, August 1, 1983-July 31, 1984, 9:28765 (R;US)

Pernambuco Univ., Recife (Brazil). Dept. de Energia Nuclear
Extraction of Eu(III) and Th(IV) with TBP in n-dodecane in the presence of nitric acid and the thermodynamic activity of the TBP in the system, 9:28862 (R;BR;In Portuguese)

Petroleum Operations and Support Services, Inc., New Orleans, LA (USA)
Strategic Petroleum Reserve annual environmental monitoring report, 1983, 9:27866 (R;US)

Phillips Petroleum Co., Idaho Falls, ID (USA). Atomic Energy Div.
Nuclear materials control in research and test reactor operations, 9:27989 (R;US)

Pickett-Sless and Associates, Vienna, VA (USA)
Page Jackson solar school, Charles Town, West Virginia. Final technical report, 9:28160 (R;US)

Pittsburg and Midway Coal Mining Co., Denver, CO (USA)
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)

Pittsburgh Univ., PA (USA)
Atom probe: a direct technique for kinetic measurements, 9:28744 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy
Task A. Study of large P/sub T/ direct photon production at the ISR. Task B. Direct photon production at the tevatron (E-706). Task C. Search for fractional charge particles in semiconductors. Progress report, June 1, 1983-May 31, 1984, 9:29589 (R;US)

Politecnico di Milano (Italy). Ist. di Fisica
Silicon drift chambers: first results and optimum processing of signals, 9:29118 (R;US)

Polytechnic Inst. of New York, Brooklyn (USA). Dept. of Mechanical and Aerospace Engineering
Transverse and quantum effects in light control by light; (a) parallel beams: pump dynamics for three level superfluorescence; and (b) counterflow beams: an algorithm for transverse, full transient effects in optical bi-stability in a fabryperot cavity. Final report Dec 79-31 Jul 83, 9:28995 (R;US)

Pontificia Univ. Catolica do Rio de Janeiro (Brazil). Dept. de Fisica
Quantum theory of the laser radiation scattering by electrons in magnetic fields, 9:29899 (R;BR;In Portuguese)

Power Technologies, Inc., Schenectady, NY (USA)
Approach for determining transfer capability objectives. Volume 2. Documentation of approach and software. User's manual, 9:28552 (R;US)

Pratt and Whitney Aircraft, West Palm Beach, FL (USA). Government Products Div.
Behavior of Ni-Cr-Si coating alloys in Na_2SO_4, V_2O_5, and mixed salt hot corrosion. Final report, 9:28766 (R;US)

Princeton Univ., NJ (USA). Dept. of Chemistry
Chemical poisoning in model heterogeneous reactions. Final report, May 1, 1977-April 30, 1983, 9:28901 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Annual report, October 1, 1981-September 30, 1982, 9:30014 (R;US)
Finite Larmor radius modification of the Mercier criterion, 9:29955 (R;US)
Steady-state operation of spheromaks by inductive techniques, 9:30013 (R;US)

Public Service Electric and Gas Co., Newark, NJ (USA)
Approach for determining transfer capability objectives. Volume 2. Documentation of approach and software. User's manual, 9:28552 (R;US)

Purdue Univ., Lafayette, IN (USA)
Flame propagation in heterogeneous mixtures of fuel drops and air, 9:28700 (R;US)
Test of quantum electrodynamics using the reaction $e^+e \rightarrow \gamma\gamma$ at $\sqrt{s} = 29$ GeV, 9:29588 (R;US)

Purdue Univ., Lafayette, IN (USA). School of Nuclear Engineering
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS), 9:28447 (R;US)

R

Radian Corp., Salt Lake City, UT (USA)
Safety information profile: overview of building construction, including the use of insulating materials, 9:29496 (R;US)
Safety information profile: sli (starting, lighting, ignition) battery assembly, 9:28481 (R;US)

Reeves (C. Richard), Austin, TX (USA)
High efficiency heat pump using ground heat source. Final report, 9:28582 (R;US)

Research Planning Inst., Inc., Columbia, SC (USA)
Summary and analysis of state and selected foreign procedures for determining the costs of natural resource damages from releases of oil or hazardous materials, 9:29310 (R;US)

Resource Planning Associates, Inc., Washington, DC (USA)
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)

Resources Conservation Co., Seattle, WA (USA)
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)

Resources for the Future, Inc., Washington, DC (USA)
Energy and household expenditure patterns. Volume 1. Residential energy demand. Final report, 9:28584 (R;US)
Industrial energy substitution: econometric analysis of US data, 1958 to 1974. Final report, 9:28502 (R;US)

Rheinisch-Westfaelischer Technischer Ueberwachungs-Verein e.V., Essen (Germany, F.R.)
Evaluation of the reports on the status of quality assurance systems in the power plants. Pt. 1, annex, pt. 2, 9:28393 (R;DE;In German)

Rice Univ., Houston, TX (USA)
Electrostatic protection of the Solar Power Satellite and rectenna. Part I. Protection of the Solar Power Satellite, 9:28093 (R;US)
Structural evolution of the Central Brooks Range, Alaska. Progress report, September 1, 1983-April 10, 1984, 9:29521 (R;US)

Rio de Janeiro Univ. (Brazil). Inst. de Biofisica
Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil, 9:29432 (R;BR;In Portuguese)

Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica
Hamiltonian formulation of QED in the superaxial gauge, 9:29665 (R;BR)

Rochester Univ., NY (USA). Dept. of Physics and Astronomy
Theoretical atomic and molecular photophysics. Final technical report, October 1, 1981-September 30, 1982, 9:29561 (R;US)

Rochester Univ., NY (USA). Inst. of Optics
Studies in optics. Technical report 13 Feb 70-15 Dec 72, 9:28993 (R;US)

Rochester Univ., NY (USA). Lab. for Laser Energetics
LLE Review. Quarterly report, April-June 1983, 9:29991 (R;US)
LLE Review. Quarterly report, January-March 1983. Volume 14, 9:29990 (R;US)
LLE Review. Quarterly report, July-September 1983. Volume 16, 9:29992 (R;US)
LLE review. Quarterly report, October-December 1982, 9:29989 (R;US)
LLE Review. Quarterly report, October-December 1983. Volume 17, 9:29993 (R;US)
New model of Raman spectra in laser produced plasma, 9:29988 (R;US)

Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Comparison of cation exchange resins for recovering americium and plutonium from chloride wastes, 9:27912 (R;US)
Comprehensive guide to the literature on acoustic emission from composites, 9:29031 (R;US)

Plutonium and americium recovery from spent molten-salt-extraction salts with aluminum-magnesium alloys, 9:27913 (R;US)
Quality engineering and control. Annual progress report, January-December 1981, 9:28882 (R;US)
Rockwell International Corp., Richland, WA (USA)
Proposed methods for defueling the TMI-2 reactor core, 9:28417 (R;US)
Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
Corrosion behavior of low-carbon steels in Grande Ronde basalt groundwater in the presence of basalt-bentonite packing, 9:28792 (R;US)
Delphi analysis of radionuclide release scenarios for a nuclear waste repository at the Hanford site, Washington state: initial iteration, 9:27976 (R;US)
Rogers, Golden and Halpern, Inc., Philadelphia, PA (USA)
Alaska index, December 1981-April 1983, 9:27862 (R;US)
Arctic summary report update, September 1983, 9:27859 (R;US)
Gulf of Mexico index, September 1982-July 1983, 9:27860 (R;US)
Mid-Atlantic summary report, 9:27861 (R;US)
Rutherford Appleton Lab., Chilton (UK)
Heavy ion inertial fusion - an overview, 9:30015 (R;GB)

S

Sandia National Labs., Albuquerque, NM (USA)
Advanced transportation system options for spent fuel and high-level waste, 9:27922 (R;US)
Ambient temperature testing of the G-tunnel heated block, 9:27955 (R;US)
APC-II: an electron beam propagation code, 9:30023 (R;US)
Comparison of concentrating collectors to tracking flat panels, 9:28080 (R;US)
Continued fraction interpolation, 9:27977 (R;US)
Cornering water jet drill for creating horizontal holes in coal seams, 9:28988 (R;US)
Current status of calculations and measurements of ion stopping power in ICF plasmas, 9:30022 (R;US)
Designing future photovoltaic systems, 9:28096 (R;US)
EASI graphics - Version II, 9:27998 (R;US)
Economic impacts of waste emplacement configuration for the proposed nuclear waste repository at the Nevada Test Site, 9:27954 (R;US)
Effect of photovoltaic systems on utility operations, 9:28097 (R;US)

Further effects of ions in the arcs, 9:29084 (R;US)
Ground motion: frequency of occurrence versus amplitude of disturbing transient events, 9:29105 (R;US)
Ground motion - some relative phase measurements in the PEP tunnel, 9:29107 (R;US)
Heavy ion inertial fusion: interface between target gain, accelerator phase space and reactor beam transport revisited, 9:30029 (R;US)
High power rf klystrons for linear accelerators, 9:29109 (R;US)
Klystron voltage pulse timing experiment, 9:29077 (R;US)
Making electron beams for the SLC linac, 9:29108 (R;US)
Mask locations in the SLC final focus region, 9:29083 (R;US)
Modifications of the design of the final transformer in the FFS to accommodate lower gradients in the final quadrupole triplet, 9:29081 (R;US)
New drift chamber for the Mark II at SLC, 9:29136 (R;US)
New particles and interactions, 9:29609 (R;US)
Occupancy of the SLC arcs during linac operation, 9:29104 (R;US)
Optimum operating temperature for accelerator diskloaded waveguide: test results from Sector 2, 9:29086 (R;US)
Performance of BGO in a high radiation environment, 9:29151 (R;US)
Phase & amplitude control system for Stanford Linear Accelerator, 9:29088 (R;US)
Positron source: first 50 nanoseconds, 9:29089 (R;US)
Preliminary study of the positions of elements in LTR, 9:29085 (R;US)
Proposed mini beta insertion for spear, 9:29075 (R;US)
Radiative decays of the upsilon (2S) resonance, 9:29611 (R;US)
Recent results on prompt electron production at PEP, 9:29610 (R;US)
Recommendations for on-site vibration standards, 9:29079 (R;US)
Simulation of systematic errors in the SLC magnets, 9:29082 (R;US)
Stanford Linear Accelerator Center monthly report for April 1984, 9:29096 (R;US)
Survey of vibration amplitudes throughout the linac, 9:29106 (R;US)
Temperature rise calculations for the beam pipe in the SLC arcs, 9:29102 (R;US)
Update on beam extraction, 9:29103 (R;US)

Stanford Univ., CA (USA). High Temperature Gasdynamics Lab.
Transient electrical behavior in magnetohydrodynamic generators. Final report, 9:28562 (R;US)

Stanford Univ., CA (USA). Stanford Synchrotron Radiation Lab.
X-ray absorption studies of metalloprotein structure: cytochrome P-450, horseradish peroxidase, plastocyanin and laccase, 9:29347 (R;US)
X-ray absorption studies of the molybdenum site of nitrogenase, 9:29346 (R;US)

State Univ. of New York, Binghamton (USA). Dept. of Physics
Unusual initial and final state effects in quantum chromodynamics. Progress report, 9:29629 (R;US)

State Univ. of New York, Stony Brook (USA)
New particles and interactions, 9:29609 (R;US)

State Univ. of New York, Stony Brook (USA). Dept. of Earth and Space Sciences
Chemical migration by contact metamorphism between pegmatite/country rocks: natural analogs for radionuclides migration, 9:27975 (R;US)

Steel (Gerald B.), Rancho Santa Fe, CA (USA)
Pan abode naturally passive solar homes, 9:28147 (R;US)

Stone and Webster Engineering Corp., Boston, MA (USA)
Electric Generation Expansion Analysis System. Volume 6. Installation manual. Final report, 9:28550 (R;US)
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Well completion report - dissolution zone water wells (PD-8, PD-11, PD-12, PD-13), Palo Duro Basin, Texas: unanalyzed data, 9:27926 (R;US)
Well completion report - G. Friemel No. 1 (PD-5) well, Palo Duro Basin, Texas: unanalyzed data, 9:27927 (R;US)
Well completion report - Harman No. 1 (PD-8) well, Palo Duro Basin, Texas: unanalyzed data, 9:27928 (R;US)
Well completion report - Mansfield No. 1 (PD-4) well, Palo Duro Basin, Texas: unanalyzed data, 9:27929 (R;US)

Stone and Webster Engineering Corp., New York (USA)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)
Well completion report - Holtzclaw No. 1 (PD-10) well, Palo Duro Basin, Texas: unanalyzed data , 9:27930 (R;US)

Stone (Ralph) and Co., Inc., Los Angeles, CA (USA)
Tar sand process water control technology. Draft final report, 9:27891 (R;US)

Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung
Basic equations for a four-component theory of turbulent magneto-plasmadynamics, 9:29941 (R;DE)
Influence of the deviation from the equilibrium deuteron distribution on the neutron spectra in linear pinch geometries, 9:29935 (R;DE)
Ion acceleration in the plasma focus, 9:29932 (R;DE)
Numerical simulation of plasma wave phenomena, 9:29933 (R;DE)
Plasmadynamics and neutron production of the POSEIDON plasma focus, 9:29936 (R;DE;In German)
Proposal for a new Thomson scattering technique for large fusion devices, 9:29938 (R;DE)
Proposed 60 GHz transmission line system for ECRH on W VII-AS, 9:30001 (R;DE)
Recent advances in Thomson scattering: high repetition rate Thomson scattering diagnostics on large plasma devices, 9:29937 (R;DE)
Self-organisation phenomena in the plasma focus, 9:29934 (R;DE)
Significance of the pinch phase for the neutron production in the plasma focus, 9:29940 (R;DE;In German)
Spectroscopic measurements concerning the energy distribution of ions in the belt pinch device HECTOR, 9:29939 (R;DE;In German)

Svejsecentralen, Glostrup (Denmark)
Cr(VI) and other metallic mutagens in fly ash and welding fumes, 9:29219 (R;US)

Svensk Kaernbraenslefoersoerjning AB, Stockholm
Report on the current situation with regard to nuclear fuel and the operations of Svensk Kaernbraenslefoersoerjning AB. Report to the Swedish Ministry of Industry, November 1982, 9:27993 (R;SE)

Systems Control, Inc., Burlington, MA (USA)
Large scale system effectiveness analysis. Final technical report, September 1977-February 1981, 9:28251 (R;US)

Systems Control, Inc., Palo Alto, CA (USA)
Protection and safety of electric distribution systems with dispersed storage and generation devices, 9:28258 (R;US)
Small power production interconnection issues and costs. Final report, 9:28546 (R;US)

T

Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Bergbau und Huettenwesen
Gasification of black coal with air-steam mixtures in fixed bed under pressure with a view to underground gasification, 9:27774 (R;DE;In German)

Technische Hochschule Aachen (Germany, F.R.). Fakultaet fuer Maschinenwesen
Dynamics of large cross-flow heat exchangers, 9:29015 (R;DE;In German)
Investigation of the operating of stratified charge engines with divided combustion chamber, 9:28702 (R;DE;In German)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

A

A1-1070 RESONANCES
Coherent Production
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Radiative Decay
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
ABANDONED SITES
Acid Mine Drainage
Evaluation of a surface application of limestone for controlling acid mine discharges from abandoned strip mines, Sewellsville, Ohio. Final report, 9:27816 (R;US)
Water Pollution
Evaluation of a surface application of limestone for controlling acid mine discharges from abandoned strip mines, Sewellsville, Ohio. Final report, 9:27816 (R;US)
ABIOGENIC GAS
Resource Assessment
Abiogenic methane: scientific and practical considerations of its potential as an energy resource, 9:27881 (R;US)

ACES
See QUARKS
ACETALDEHYDE
Liquid Column Chromatography
Rapid determination of ppB levels of aldehydes in ambient air by high-performance liquid chromatography, 9:29197 (R;US)
Quantitative Chemical Analysis
Rapid determination of ppB levels of aldehydes in ambient air by high-performance liquid chromatography, 9:29197 (R;US)
ACETIC ALDEHYDE
See ACETALDEHYDE
ACETONE
Air Pollution Control
Hydrocarbon solvent recovery in the presence of resin contaminants, 9:29215 (R;US)
ACETONITRILE
Chemical Radiation Effects
Novel radical anions and hydrogen atom tunneling in the solid state, 9:28965 (J;US)
ACETYLENE
Dehydrogenation
Mechanistic and kinetic studies of the elementary processes in catalytic combustion of methane. Annual report, 1 Sep 82-31 Aug 83, 9:27831 (R;US)
Genetic Effects
Site specific cleavage of θX-174 replicative form DNA after modification by N-acetoxy-N-2-acetylaminofluorene, 9:29509 (J;US)
ACID ELECTROLYTE FUEL CELLS
Electrochemistry
Fuel cell reactions in super acid electrolytes. Annual report, 1 Jun 82-31 May 83, 9:28568 (R;US)
Electrolytes
Fuel cell reactions in super acid electrolytes. Annual report, 1 Jun 82-31 May 83, 9:28568 (R;US)

ACID HYDROLYSIS
Economic Analysis
Cellulose-ethanol commercialization. Final report, 9:28047 (R;US)
ACID MINE DRAINAGE
Water Treatment
Evaluation of a surface application of limestone for controlling acid mine discharges from abandoned strip mines, Sewellsville, Ohio. Final report, 9:27816 (R;US)
ACID RAIN
Biological Effects
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
Terrestrial ecology, 9:29188 (RA;US)
Environmental Effects
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29230 (J;US)
Inventory of research under the National Acid Precipitation Assessment Program, 9:29213 (R;US)
Environmental Impacts
Uncertainty assessment for acid deposition, 9:29224 (R;US)
Information Systems
Inventory of research under the National Acid Precipitation Assessment Program, 9:29213 (R;US)
Pollution Sources
Inventory of research under the National Acid Precipitation Assessment Program, 9:29213 (R;US)
Public Policy
Impacts of acid deposition on regional economic activity, 9:28510 (R;US)
Research Programs
Inventory of research under the National Acid Precipitation Assessment Program, 9:29213 (R;US)
Simulation
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
Socio-Economic Factors
Impacts of acid deposition on regional economic activity, 9:28510 (R;US)
ACIDIFICATION
Biological Effects
Potential impacts of low pH on fish and fish populations, 9:29468 (R;US)
Environmental Impacts
Rocky Mountain acidification study, 9:29259 (R;US)
ACIDITY
See PH VALUE
ACOUSTIC EMISSION TESTING
Acoustic emission on stressed concrete, 9:29028 (R;FR)
Bibliographies
Comprehensive guide to the literature on acoustic emission from composites, 9:29031 (R;US)
ACQUISITION (DATA)
See DATA ACQUISITION
ACRIDINES
Biological Effects

NMR Spectra
Influence of H_0 field on NMR spectra of tunnelling ND_4^+ ion, 9:28909 (RA;PL;In Polish)
Investigations of the second moment of NMR spectra line in solid solutions of fluoroperovskites NH4Cosub(x)Mgsub(1-x)F3, 9:28912 (RA;PL;In Polish)
Second moments of NMR spectra line in diamagnetic and paramagnetic fluoroperovskites type NH_4MeF_3, 9:28911 (RA;PL;In Polish)
Nuclear Magnetic Resonance
Molecular dynamics in methylammonium salts studied by NMR, 9:28908 (RA;PL;In Polish)
Oxidation
Combined autoradiography and immunofluorescence for estimation of single cell activity by ammonium-oxidizing bacteria, 9:29293 (J;US)
AMMONIUM DIURANATE
See AMMONIUM URANATES
AMMONIUM URANATES
Biological Half-Life
Comparison of early lung clearance of yellowcake aerosols in rats with in vitro dissolution and IR analysis, 9:29456 (J;GB)
Lung Clearance
Comparison of early lung clearance of yellowcake aerosols in rats with in vitro dissolution and IR analysis, 9:29456 (J;GB)
AMPHIBOLITES
Activation Analysis
Chemical migration by contact metamorphism between pegmatite/country rocks: natural analogs for radionuclides migration, 9:27975 (R;US)
ANALYSIS (ACTIVATION)
See ACTIVATION ANALYSIS
ANALYTIC FUNCTIONS
Differential Equations
Spectral characterization of abstract functions, 9:29912 (R;IT)
Integrals
Integral representation of the exponentially convex functions of infinitely many variables on Hilbert spaces, 9:29913 (R;IT)
ANAPHASE
See MITOSIS
ANEMOMETERS
Supports
Measurement of turbulent wind velocities using a rotating boom apparatus, 9:28242 (R;US)
ANEUPLOIDY
Bioassay
Development of tests that detect induction of meiotic nondisjunction in mammals, 9:29484 (RA;US)
ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY

BLOOD VESSELS
ANGRA-1 REACTOR
Radiation Accidents
Technical subsidies for the operation of IRD/CNEN emergency vehicles in the case of a nuclear accident at the Angra Nuclear Power Plant with associated radioactive releases to the atmosphere, 9:28420 (R;BR;In Portuguese)
ANHARMONIC OSCILLATORS
Ground States
Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator, 9:29917 (R;XJ)
Perturbation Theory
Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator, 9:29917 (R;XJ)
ANIMAL CELLS
Includes human cells.
See also TUMOR CELLS
Cell Flow Systems
Chromomycin A_3 as a fluorescent probe for flow cytometry of human gynecologic samples, 9:29368 (J;US)
Chromosome Losses
Stable, near-haploid mammalian cell line (Dipodomys ordii), 9:29364 (J;US)
Cloning
Clonal variation in colony morphology and growth of CHO cells cultured on agar, 9:29362 (J;US)
Stable, near-haploid mammalian cell line (Dipodomys ordii), 9:29364 (J;US)
Colony Formation
Clonal variation in colony morphology and growth of CHO cells cultured on agar, 9:29362 (J;US)
Fluorescence
Three-color fluorescence measurements on single cells excited at three laser wavelengths, 9:29358 (J;US)
Genetic Radiation Effects
Combined hit theory-microdosimetric explanation of cellular radiobiological action, 9:29463 (BA;XA)
Growth
Clonal variation in colony morphology and growth of CHO cells cultured on agar, 9:29362 (J;US)
Morphology
Clonal variation in colony morphology and growth of CHO cells cultured on agar, 9:29362 (J;US)
ANIMAL FEEDS
Production
Reactional studies on the formation of protein from cellulose waste, 9:29400 (R;DE;In German)
ANIMAL SHELTERS
Solar Space Heating
Demonstration of solar/hydrothermal energy system in the Montgomery County Animal Shelter, 9:28154 (R;US)
Solar Water Heating
Demonstration of solar/hydrothermal energy system in the Montgomery County Animal Shelter, 9:28154 (R;US)
ANIMALS

Density
Stochastic model for estimation of environmental density, 9:29252 (R;US)
Population Dynamics
Stochastic model for estimation of environmental density, 9:29252 (R;US)
ANL
Computer Networks
Argonne integrated heterogeneous file transfer network, 9:30073 (R;US)
Linear Accelerators
Status report on the ATLAS superconducting linear accelerator, 9:29093 (R;US)
ANNELIDS
Feeding
Variable ingestion rate and its role in optimal foraging behavior of marine deposit feeders, 9:29292 (J;US)
ANOMALONS
About a possible energy dependence of the anomalon effect at charge two, 9:29730 (RA;US)
Active multitarget experiment for anomalons, 9:29133 (RA;US)
Anomalons: statistical fluctuation or physical fact, 9:29865 (J;GB)
Anomalous mean free path for Z=2 relativistic projectile fragments in emulsion, 9:29726 (RA;US)
Anomalous nuclei and a nonstatic metastable σ-tau phase, 9:29829 (RA;US)
Are anomalons still provocative: a summary of the present experimental situation, 9:29781 (RA;US)
Are there anomalons at charge two: a comparison of helium induced primary and secondary interactions in nuclear research emulsion at about 2 GeV/nucleon, 9:29727 (RA;US)
chi^3 analyses of nuclear emulsion anomalous projectile fragment data, 9:29134 (RA;US)
Detector for the measurement of projectile fragment interaction cross sections, 9:29693 (RA;US)
Development of a segmented Cerenkov detector for study of the "anomalon" phenomenon, 9:29694 (RA;US)
Evidence for the non-existence of anomalous projectile fragments with $Z^* = 1.33, 1.67, 2.33$ and 2.67, 9:29780 (RA;US)
First results from a repeat experiment on the mean free path of projectile fragments from 1.88 A GeV ^{56}Fe - emulsion interactions, 9:29724 (RA;US)
Limits on anomalon production in deuterium-deuterium collisions at 7.9 GeV/c, 9:29710 (RA;US)
Mean free path of ^{40}Ar projectile fragments in CR39 track detectors, 9:29722 (RA;US)
Mean free path of relativistic fragments from heavy ion reactions induced by 1.8A GeV ^{40}Ar in low sensitive nuclear emulsions, 9:29725 (RA;US)
Particle-gamma coincidence measurements in ^{12}C + ^{12}C and ^{12}C + Pb collisions at 2.1 GeV/A incident energy, first results - γ-ray spectrum, 9:29732 (RA;US)
Pion condensates as anomalons, 9:29830 (RA;US)
Quasi-molecular structures in nuclear systems, 9:29828 (RA;US)
Search for anomalons among singly charged relativistic particles from ^{16}O interactions at 2 GeV/nucleon, 9:29729 (RA;US)
Search for short-lived anomalons in projectile fragmentation, 9:29761 (RA;US)
Search for anomalon decay by radiochemical methods, 9:29762 (RA;US)
Search for topological correlations in the interactions of relativistic projectile fragments from relativistic heavy ion collisions, 9:29731 (RA;US)
Some anomalon phenomenology, 9:29832 (RA;US)
Studies of anomalous projectile fragments with lead-glass, plastic track detectors, and Cerenkov detectors, 9:29733 (RA;US)
Study of anomalous nuclear projectile fragments in reactions of 1.85A GeV ^{40}Ar in CR-39 etched track detector, 9:29723 (RA;US)
Bag Model
Are "anomalons" a bag ful'o colorful nucleons, 9:29833 (RA;US)
Is the anomalon a dinotor, 9:29826 (RA;US)
Meetings
Proceedings of the 6th high energy heavy ion study and 2nd workshop on anomalons, 9:29691 (R;US)
Quark Model
Nuclear chromodynamics and "anomalons", 9:29831 (RA;US)
ANTARCTIC REGIONS

Activation Analysis
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Chemical Analysis
Chemical analysis of coal by energy dispersive x-ray fluorescence utilizing artificial standards, 9:27792 (J;US)
Organic oxygen characterization of coal and coal liquids. Quarterly progress report, February-April 1984, 9:27786 (R;US)
Chemical Composition
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Coal Gasification Plants
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Drying
Filtration ash drying study, 9:27746 (RA;US)
Electric Conductivity
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Environmental Effects
Hydrogeologic investigation of the Ritchie Road site. Final report, 9:27806 (R;US)
Ground Disposal
Hydrogeologic investigation of the Ritchie Road site. Final report, 9:27806 (R;US)
Hardness
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Melting Points
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Stabilization
Stabilization of power plant by-product storage sites for building development. Final report, 9:27799 (R;US)
X-Ray Diffraction
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
X-Ray Fluorescence Analysis
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)

ASPHALTENES
Chemical Bonds
Hydrogen bonding in asphaltenes and coal. Final report, 9:27784 (R;US)
Organometallic Compounds
Chemical Process Research and Development Program. FY 1983 annual report, 9:28855 (R;US)

ATMOSPHERIC CHEMISTRY
Radiological and Environmental Research Division annual report, January-December 1982. Atmospheric physics. Part 4, 9:29173 (R;US)
Mathematical Models
Indications of nonlinearities in processes of wet deposition, 9:29178 (RA;US)

ATMOSPHERIC CIRCULATION
Mathematical Models
SEADEX experiment, 9:29175 (RA;US)

ATMOSPHERIC PRECIPITATIONS
See also HAIL
RAIN
SNOW
Chemical Composition
Statistical analysis of relationships between precipitation chemistry and air quality in New Hampshire and precursor emissions, 9:29193 (R;US)
Comparative Evaluations
Statistical analysis of relationships between precipitation chemistry and air quality in New Hampshire and precursor emissions, 9:29193 (R;US)
Isotope Ratio
HDO and $H_2{}^{18}O$ atmospheric cycles. Simulation using a general circulation model, 9:29516 (R;FR;In French and English)

ATOMIC ABSORPTION SPECTROSCOPY
See ABSORPTION SPECTROSCOPY

ATOMIC BOMBS
See NUCLEAR WEAPONS

ATOMIC ENERGY
See NUCLEAR ENERGY

ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS

ATOMIC WEAPONS
See NUCLEAR WEAPONS
ATOMS
Internal Conversion
Internal conversion coefficients in atoms with a nonstable electron configuration, 9:29817 (RA;SU;In Russian)
ATP-ASE
Code numbers 3.6.1.3 and 3.6.1.8.
Biosynthesis
Regulation of transport systems in cultured mammalian cells, 9:29339 (RA;US)
Molecular Structure
Regulation of transport systems in cultured mammalian cells, 9:29339 (RA;US)
ATROPHY
Radioinduction
^{211}At radiocolloid therapy: further observations and comparison with radiocollocis of ^{32}P, ^{165}Dy, and ^{90}Y, 9:29458 (J;US)
ATTACHED GREENHOUSES
Solar greenhouses and sunspaces: lessons learned, 9:28144 (R;US)
Construction
Solar greenhouse, 9:28155 (R;US)
ATTICS
Thermal Insulation
An in situ study of attic loose-fill thermal insulation in residential applications, 9:28645 (BA;US)
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
AURORAE
Electron Precipitation
Experimental study of diffuse auroral precipitations, 9:29546 (R;FR;In French)
Proton Precipitation
Experimental study of diffuse auroral precipitations, 9:29546 (R;FR;In French)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Mechanical Properties
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Microstructure
Theoretical assessment of the effect of microchemical, microstructural and environmental mechanisms on swelling incubation in austenitic stainless steels, 9:28755 (RA;US)
Physical Properties
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Physical Radiation Effects
Development of materials for higher burn-up rates, 9:28314 (RA;DE;In German)
Ruptures
Model for in-reactor stress rupture of austenitic stainless steels, 9:28751 (RA;US)
Stresses
Model for in-reactor stress rupture of austenitic stainless steels, 9:28751 (RA;US)
Swelling
Factors that determine the swelling behavior of austenitic stainless steels, 9:28756 (RA;US)
Theoretical assessment of the effect of microchemical, microstructural and environmental mechanisms on swelling incubation in austenitic stainless steels, 9:28755 (RA;US)
AUSTRALIA
Energy Conservation
Consumer energy conservation policies in Australia, 9:28534 (R;DE)
Energy Policy
Consumer energy conservation policies in Australia, 9:28534 (R;DE)
AUTOCLAVES
Utilization of the hydrogen-microautoclave in support of the coal liquefaction process, topical report No. 9. Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama, 9:27761 (R;US)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES STANDARDS
AUTOMOBILES
Exhaust Systems
Evaluation of the temperature effects on five 1981 passenger vehicles. Technical report, 9:28719 (R;US)
AUTOMOTIVE FUELS
Storage
Transportation energy contingency planning: emergency fuel storage, 9:28666 (R;US)
AVIATION FUELS
Chemical Analysis
Aviation fuels, 1983, 9:27872 (R;US)

B

BACA GEOTHERMAL FIELD
Geothermal resources of the Rio Grande rift, 9:28199 (RA;US)
Geochemical Surveys
Geochemical data representing thermal and nonthermal waters from the Valles Caldera, 9:28221 (RA;US)
BACTERIA
See also ESCHERICHIA COLI ZYMOMONAS MOBILIS
Autoradiography
Combined autoradiography and immunofluorescence for estimation of single cell activity by ammonium-oxidizing bacteria, 9:29293 (J;US)
Fluorescence
Combined autoradiography and immunofluorescence for estimation of single cell activity by ammonium-oxidizing bacteria, 9:29293 (J;US)
Metabolism
Combined autoradiography and immunofluorescence for estimation of single cell activity by ammonium-oxidizing bacteria, 9:29293 (J;US)
Oxidoreductases
Purification and properties of NAD-dependent 5,10-methylenetetrahydrofolate dehydrogenase from Acetobacterium woodii, 9:29348 (J;US)
Proteins
Born energy problem in bacteriorhodopsin, 9:29349 (J;US)
BACTERIOPHAGES
DNA Sequencing
Complete nucleotide sequence of bacteriophage T7 DNA and the locations of T7 genetic elements, 9:29371 (J;GB)
Genetic Mapping
Complete nucleotide sequence of bacteriophage T7 DNA and the locations of T7 genetic elements, 9:29371 (J;GB)
BAG MODEL
Chiral Symmetry
Chiral symmetry and the bag model: A new starting point for nuclear physics, 9:29681 (J;US)
Magnetostriction
Magnetostriction of a quark bag and hadron polarizability, 9:29633 (R;XJ;In Russian)
Unified Gauge Models
Gauge theories of quark confinement in 2+1 dim: A comparative study of SU(2) Yang-Mills and Yang-Mills-Higgs systems, 9:29685 (BA;US)
BANKS
See COMMERCIAL BUILDINGS
BARIUM COMPOUNDS
Deposition
Preparation of barium titanate films using sol-gel techniques, 9:28836 (R;US)
Electrical Properties
Preparation of barium titanate films using sol-gel techniques, 9:28836 (R;US)

BARLEY
Plant Growth
Barley growth in coal liquid and diesel liquid fuels from coal and oil: a comparison of potential toxic effects on barley, 9:29501 (J;NL)
Yields
Barley growth in coal liquid and diesel liquid fuels from coal and oil: a comparison of potential toxic effects on barley, 9:29501 (J;NL)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Bibliographies
10-MW(e) solar-thermal central-receiver pilot plant. Volume 2. Project documentation. Final report, 9:28125 (R;US)
Computerized Simulation
Dynamic computer simulation of the DOE 10 MW Solar Thermal Pilot Plant, 9:28103 (R;US)
Design
10 MW/sub e/ Solar Thermal Central Receiver Pilot Plant. Final design review package, 9:28109 (R;US)
10 MWe solar thermal central receiver pilot plant. Preliminary design review package, 9:28108 (R;US)
10 MWe solar thermal central receiver pilot plant: conceptual design review package, 9:28107 (R;US)
Equipment
10 MW/sub e/ solar thermal central receiver pilot plant: Phase II operating and maintenance equipment, 9:28110 (R;US)
10 MWe solar thermal central receiver pilot plant. Phase II Manufacturing Plan, Revision 2, 9:28114 (R;US)
Hazards
Hazard analysis for 10 MW/sub e/ solar thermal central receiver pilot plant, preliminary report, 9:28113 (R;US)
Heliostats
10 MWe collector subsystem software/firmware functional requirements specification, 9:28115 (R;US)
Collector sybsystem Dual Heliostat array controller test procedure 106, 9:28122 (R;US)
Collector subsystem heliostat readiness test: test procedure 101. Revision 0, 9:28121 (R;US)
Collector subsystem official performance test: Test Procedure 118. Revision A, 9:28124 (R;US)
Collector substystem heliostat targeting verification: Test Procedure 116, 9:28123 (R;US)
Heliostat Stimulator operator's manual, 9:28117 (R;US)
Maintenance instructions: heliostat field subsystem for 10 megawatt solar power system/central receiver system, 9:28118 (R;US)
Supplemental spares plan: heliostat field subsystem for 10 megawatt solar power systems/central receiver system, 9:28119 (R;US)
System description document: collector subsystem for the 10 MWe solar thermal central receiver pilot plant. Phase II, 9:28116 (R;US)
Maintenance
10 MW/sub e/ solar thermal central receiver pilot plant: Phase II operating and maintenance equipment, 9:28110 (R;US)
Operation
10 MW/sub e/ solar thermal central receiver pilot plant: Phase II operating and maintenance equipment, 9:28110 (R;US)
Quality Assurance
Quality assurance plan for 10 MWe Phase II, 9:28111 (R;US)
Safety Engineering
10 MW/sub e/ solar pilot plant collector subsystem: system safety plan, 9:28112 (R;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BASIC INTERACTIONS
See also GRAVITATIONAL INTERACTIONS
SO Groups
Generalized vector products, duality, and octonionic identities in D = 8 geometry, 9:29918 (J;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES
BATTERY CHARGERS
Performance Testing
Development of a new charger system, 9:28478 (R;DE;In German)
Testing
Test and evaluation of the Philips Model PE 1701 and Lester Model 9865 electric vehicle battery chargers, 9:28716 (R;US)
BEAGLES
Radionuclide Kinetics
Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983, 9:29439 (R;US)
BEAM DYNAMICS
Simulation
Positron source: first 50 nanoseconds, 9:29089 (R;US)
BEAM FOCUSING MAGNETS
Beam Optics
Proposed mini beta insertion for spear, 9:29075 (R;US)
Magnetic Fields
First order comparison of numerical calculation and two different turtle input schemes to represent a SLC defocusing magnet, 9:29078 (R;US)
Simulation of systematic errors in the SLC magnets, 9:29082 (R;US)
Shielding
Mask locations in the SLC final focus region, 9:29083 (R;US)
BEAM MONITORS
Noise
BPMO HISTOS plots, 9:29087 (R;US)
BEAM SPLITTING
Superconducting Magnets
Investigation of a superconducting beam splitter for atlas, 9:29094 (R;US)
BEAM-PLASMA SYSTEMS
Charged-Particle Transport
Ab initio calculations of the charge state of a fast heavy ion stopping in a finite temperature target, 9:30034 (J;FR)
Energy Losses
Nature of the beam-density effect on energy loss by nonrelativistic charged-particle beams, 9:29969 (J;US)
Test Particles
Nonlinear dynamic polarization force on a relativistic test particle in a nonequilibrium beam-plasma system. Technical report, 9:29919 (R;US)
BEAUTY PARTICLES
Particle Production
Recent results on prompt electron production at PEP, 9:29610 (R;US)
Semileptonic Decay
Recent results on prompt electron production at PEP, 9:29610 (R;US)
BELT PINCH
Ion Temperature
Spectroscopic measurements concerning the energy distribution of ions in the belt pinch device HECTOR, 9:29939 (R;DE;In German)
Visible Spectra
Spectroscopic measurements concerning the energy distribution of ions in the belt pinch device HECTOR, 9:29939 (R;DE;In German)
BENI OIL
See SESAME OIL
BENNE OIL
See SESAME OIL
BENZENE
Dehydrogenation
Kinetics of vapor-phase electrochemical oxidative dehydrogenation of ethylbenzene, 9:28951 (J;US)
Genetic Effects
Increase of sister chromatid exchanges and perturbations of cell division kinetics in human lymphocytes by benzene metabolites, 9:29511 (J;US)

Hydrogenation
Crystallite size and support effects on CO hydrogenation reactions. Final progress report, January 1, 1982-August 30, 1984, 9:28027 (R;US)
Oxidation
Kinetics of vapor-phase electrochemical oxidative dehydrogenation of ethylbenzene, 9:28951 (J;US)
Radiolysis
Studies of electron-beam-induced decomposition of benzene. Semiannual technical report No. 3, 9:28961 (R;US)
Solvent Properties
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
Synthesis
Flash pyrolysis of biomass with reactive and non-reactive gases, 9:28012 (R;US)

BENZOPYRENE
DNA Adducts
DNA dosimetry applied to problems in genetic toxicology, 9:29338 (RA;US)
Dosimetry of PAH in skin carcinogenesis, 9:29493 (RA;US)
Dose-Response Relationships
Dosimetry of PAH in skin carcinogenesis, 9:29493 (RA;US)
Metabolism
In vitro studies of cutaneous toxicity and chemical-skin interactions, 9:29378 (RA;US)
Metabolic activation and carcinogen metabolism, 9:29379 (RA;US)
Skin Absorption
In vitro studies of cutaneous toxicity and chemical-skin interactions, 9:29378 (RA;US)

BENZOTHIOPHENES
See THIONAPHTHENES

BERYLLIUM
Diffusion
Behaviour of beryllium in a tokamak fusion reactor, 9:30005 (R;DE)
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)

BERYLLIUM 8
Excited States
Radial oscillation excitation of ^{8}Be in α-α scattering, 9:29701 (RA;SU;In Russian)

BERYLLIUM 9
Hypernuclei
Phenomenological Σ -N potential, 9:29600 (RA;SU;In Russian)

BERYLLIUM 9 TARGET
Proton Reactions
Microscopic description of (p,n) reactions on 1p shell nuclei, 9:29718 (RA;SU;In Russian)

BERYLLIUM MODERATORS
See BERYLLIUM

BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DECAY RADIOISOTOPES
Gamma Detection
Nondestructive low-energy photon analysis of environmental samples, 9:29270 (R;US)

BIBLIOGRAPHIES
Limited to significant lists of documents chosen on the basis of subject.
Selected bibliography of solar thermal literature. Volume 1: bibliography, 9:28101 (R;US)
Indexes
Selected bibliography of solar thermal literature. Volume 2: indexes, 9:28102 (R;US)

BILE DUCTS
See BILIARY TRACT

BILIARY TRACT
Biomedical Radiography
Nuclear-medical method applied for determining the choledochus diameter after cholecystectomy, 9:29388 (R;DE;In German)
Results of 1,886 choledochal surgeries under particular consideration of intraoperative routine cholangiography with contrast media providing different degrees of density, 9:29385 (R;DE;In German)
Healing
Results of 1,886 choledochal surgeries under particular consideration of intraoperative routine cholangiography with contrast media providing different degrees of density, 9:29385 (R;DE;In German)
Morphological Changes
Nuclear-medical method applied for determining the choledochus diameter after cholecystectomy, 9:29388 (R;DE;In German)
Scintiscanning
Nuclear-medical method applied for determining the choledochus diameter after cholecystectomy, 9:29388 (R;DE;In German)
Surgery
Results of 1,886 choledochal surgeries under particular consideration of intraoperative routine cholangiography with contrast media providing different degrees of density, 9:29385 (R;DE;In German)

BINARY ALLOY SYSTEMS
Eigenstates
New scaling results in quantum percolation, 9:28772 (R;IT)

BIOASSAY
Performance
Analysis of uranium urinalysis and in vivo measurement results from eleven participating uranium mills, 9:27980 (R;US)

BIODEGRADATION
Inhibition
Effects of fly ash on microbial CO_2 evolution from an agricultural soil, 9:29266 (J;NL)

BIOGAS
See METHANE

BIOLOGICAL ADAPTATION
Biochemistry
Environmental stress mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 9:29320 (R;US)
Genetic Engineering
Environmental stress mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 9:29320 (R;US)

BIOLOGICAL EVOLUTION
Biological Models
Geometry and evolution, 9:29372 (J;US)
Mathematical Models
Geometry and evolution, 9:29372 (J;US)

BIOLOGICAL MATERIALS
See also FOREST LITTER
Radiation Scattering Analysis
Multielement analysis of unweighed biological and geological samples using backscatter and fundamental parameters, 9:28897 (J;US)
Radiochemical Analysis
Analytical methods for radionuclides in liquid and solid media, 9:29431 (R;US)

BIOLOGICAL MODELS
Evaluation
In vitro studies of cutaneous toxicity and chemical-skin interactions, 9:29378 (RA;US)
Induction and progression of neoplasia in tracheal epithelium, 9:29491 (RA;US)

BIOLOGICAL REPAIR
See also DNA REPAIR
Biochemical Reaction Kinetics
DNA repair in human cells, 9:29343 (RA;US)
Mammalian cytogenetics, 9:29444 (RA;US)

Biochemistry
Genetic analysis of DNA repair in man with cell hybrids, 9:29344 (RA;US)
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
Mechanisms of mutagenesis and DNA repair, 9:29442 (RA;US)
Genetics
DNA repair in human cells, 9:29343 (RA;US)
Genetic dissection of DNA repair in xeroderma pigmentosum cells, 9:29369 (RA;US)
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
Inhibition
DNA repair in human cells, 9:29343 (RA;US)
BIOLOGICAL TESTING
See BIOASSAY
BIOMASS
Research Programs
Biomass production programs, 9:28075 (RA;US)
DOE's biomass thermochemical conversion program: current research status and prospects for technology transfer, 9:28036 (R;US)
Resource Potential
Environmental and social costs of biomass energy, 9:29314 (J;US)
Thermochemical Processes
DOE's biomass thermochemical conversion program: current research status and prospects for technology transfer, 9:28036 (R;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Comparative Evaluations
Diagnosis of osteoarthropathia psoriatica: comparison of clinical, radiological and scintigraphic data, 9:29391 (RA;AT;In German)
Image Processing
Chest x-ray analysis by computer. Final report, 9:29394 (R;US)
Chest x-ray analysis by computer: final technical report, 9:29395 (R;US)
Evaluation of synchrotron x-rays for digital subtraction coronary angiography, 9:29396 (J;US)
Study to determine the feasibility of computer diagnosis of the pneumoconioses. Final report, 9:29393 (R;US)
Quality Control
Dosimetry and quality control in radiodiagnosis, 9:29382 (R;FR;In French)
Regulations
Measurements and considerations concerning the application of X-rays under particular consideration of the X-radiation regulations, 9:29433 (R;DE;In German)
BISMUTH 212
Biological Half-Life
Relative activities of ^{212}Bi (thorium-C) and ^{228}Ra (mesothorium-1) in former radium dial workers, 9:29426 (RA;US)
Isotope Ratio
Relative activities of ^{212}Bi (thorium-C) and ^{228}Ra (mesothorium-1) in former radium dial workers, 9:29426 (RA;US)
BISMUTH GERMANATES
Fabrication
Bismuth germanate (bgo) optimisation for energy resolution and purity, 9:29142 (J;US)
Impurities
Bismuth germanate (bgo) optimisation for energy resolution and purity, 9:29142 (J;US)
Materials Testing
Bismuth germanate (bgo) optimisation for energy resolution and purity, 9:29142 (J;US)
Physical Radiation Effects
Performance of BGO in a high radiation environment, 9:29151 (R;US)
BITUMENS
Refining
Recovery of oil from Utah's Tar Sands. Final report, December 1, 1979-March 31, 1983, 9:27885 (R;US)
BLACK HOLES
Electrodynamics
Equations of motion for a radiating charged particle in electromagnetic fields on curved spacetime, 9:29891 (R;IT)
BLACK SHALES
Tensile Properties
Indirect and direct tensile behavior of Devonian oil shales, 9:27888 (R;US)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLASTING
See EXPLOSIVE FRACTURING
BLOOD VESSELS
Biomedical Radiography
Evaluation of synchrotron x-rays for digital subtraction coronary angiography, 9:29396 (J;US)
BLOWDOWN
Dynamic Loads
Comparison of BEACON and COMPARE reactor cavity subcompartment analyses, 9:28439 (R;US)
BLUE-GREEN ALGAE
See CYANOBACTERIA
BNFL
Radiation Monitoring
Annual report on radioactive discharges and monitoring of the environment 1982, 9:27970 (R;DE)
Radioactive Effluents
Annual report on radioactive discharges and monitoring of the environment 1982, 9:27970 (R;DE)
BNL
Quadrupole Linacs
Early operating experience with the Brookhaven National Laboratory radio frequency quadrupole accelerator, 9:29092 (R;US)
BOILER FUEL
See BOILER FUELS
BOILER FUELS
Fuel Substitution
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
BOILERS
Design
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Economics
Economics of industrial steam options for the 1980's, 9:28250 (R;US)
Emission
Economics of industrial steam options for the 1980's, 9:28250 (R;US)
Flue Gas
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
Fouling
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Fuel Substitution
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Fuels
Economics of industrial steam options for the 1980's, 9:28250 (R;US)
Retrofitting
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS

BONE SEEKERS
Dosimetry
Age-dependent dose-conversion factors for selected bone-seeking radionuclides, 9:29437 (R;US)
BONES
See SKELETON
BONNEVILLE POWER ADMINISTRATION
Environmental Impact Statements
1982 rate proposal. Final environmental impact statement, 9:29315 (R;US)
Environmental Policy
Annual environmental report, 9:28509 (R;US)
BOOM TOWNS
Management
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
BOOSTERS (PARTICLE)
See PARTICLE BOOSTERS
BORAX
Latent Heat Storage
Solar heat storage in phase change material, 9:28189 (R;US)
BOREHOLES
Directional Drilling
High-angle drilling for the Centralia Partial-Seam Crip Test, 9:27779 (R;US)
Explosions
Microexplosions in boreholes (mikroexplosioner i borrhael), 9:29161 (R;US)
Well Logging Equipment
Geoscience experiments in boreholes: instrumentation, 9:28223 (R;US)
BORON 10 TARGET
Alpha Reactions
Exchange processes in (α, d) and (α, t) reactions on boron isotopes, 9:29721 (RA;SU;In Russian)
BORON 11 TARGET
Alpha Reactions
Exchange processes in (α, d) and (α, t) reactions on boron isotopes, 9:29721 (RA;SU;In Russian)
BORON ALLOYS
Displacement Rates
dpa calculations for neutron irradiated amorphous $Fe_{40}Ni_{40}B_{20}$ ribbons, 9:28768 (R;DE;In German)
Permeability
Environment and fracture ($Fe_{40}Ni_{40}P_{14}B_6$), 9:28763 (R;US)
BOROSILICATE GLASS
Stability
Characterization of borosilicate glass containing Savannah River Plant radioactive waste, 9:27964 (BA;US)
BOROSILICATES
See BOROSILICATE GLASS
BOSONS
See also INTERMEDIATE BOSONS
CP Invariance
Status of theories of CP noninvariance, 9:29650 (BA;US)
BOUNDARY LAYERS
See also PLASMA SCRAPE-OFF LAYER
Natural Convection
VOICE experiment: preliminary results, 9:29174 (RA;US)
BOUNDARY-VALUE PROBLEMS
Finite Difference Method
Inherent errors in the methods of approximations. A case of two point singular perturbation problem, 9:29915 (R;IT)
BPA
See BONNEVILLE POWER ADMINISTRATION
BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
Injuries
Quantitative autoradiography of ^{14}C-D-glucose metabolism of normal and traumatized rat brain using micro-absorption photometry, 9:29407 (R;DE;In German)
Metabolism
Quantitative autoradiography of ^{14}C-D-glucose metabolism of normal and traumatized rat brain using micro-absorption photometry, 9:29407 (R;DE;In German)
BRASS
Influence of sea water pretreatment and flow velocity on the corrosion behaviour of some modified aluminium alloys in North Sea water, 9:28769 (R;DE)
Shear
Shear punch tests for mechanical property measurements in TEM disc-sized specimens, 9:28754 (RA;US)
BRAZED JOINTS
Compatibility
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
BRAZIL
Seismology
Aspects of sismo-tectonic stability in the South-Eastern region of Brazil of interest to geology of engineering, 9:29524 (R;BR;In Portuguese)
BREAKWATERS

BREEDING BLANKETS
After-Heat Removal
Design criteria for afterheat removal in fusion power plants, 9:30036 (J;US)
Breeding Ratio
Tritium breeding materials, 9:29987 (R;US)
Creep
Influence of irradiation and thermal creep on stress redistribution in fusion blankets, 9:29995 (RA;US)
Design
Conceptual design of two helium cooled fusion blankets (ceramic and liquid breeder) for INTOR, 9:30008 (R;DE)
Design criteria for afterheat removal in fusion power plants, 9:30036 (J;US)
Environmental considerations of LOTRIT, 9:30038 (J;US)
Fissionable blankets for inertial confinement fusion production of tritium, 9:30042 (J;US)
Heat transfer performance of a solid breeder blanket: Comparison of TRIO-01 experimental data with model, 9:30039 (J;US)
HYFIRE: A tokamak-high-temperature electrolysis system, 9:30051 (J;US)
Fire Prevention
Environmental considerations of LOTRIT, 9:30038 (J;US)
Heat Transfer
Heat transfer performance of a solid breeder blanket: Comparison of TRIO-01 experimental data with model, 9:30039 (J;US)
Performance
HYFIRE: A tokamak-high-temperature electrolysis system, 9:30051 (J;US)
Shock Waves
Shock propagation through the Cascade ICF reactor Li_2O-pebble blanket, 9:30037 (J;US)
Stresses
Influence of irradiation and thermal creep on stress redistribution in fusion blankets, 9:29995 (RA;US)
Tritium Recovery
Heat transfer performance of a solid breeder blanket: Comparison of TRIO-01 experimental data with model, 9:30039 (J;US)
BREIT-WIGNER FORMULA
Solitons
Some specific properties of scattering on solitons in the model of current-current interaction. Soliton form factor in the kinematic region of t in the range of [0,4m^2] momenta, 9:29672 (R;XJ;In Russian)
BRICKS
R Factors
Economical high R-value brick walls for housing, 9:28631 (BA;US)
Thermal Conductivity
Economical high R-value brick walls for housing, 9:28631 (BA;US)
BRINES
Corrosive Effects
Environmental assisted fracture of cast and wrought mild steels in brine, 9:28791 (R;US)

Evaluation of iron-base materials for waste package containers in a salt repository, 9:27950 (R;US)
Environmental Effects
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1982-November 1983. Volume I, 9:27867 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry site, May 1982-November 1983. Volume II, Appendices, 9:27868 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1983-November 1983. Volume III, Executive Summary, 9:27869 (R;US)
Leaching
Strategic Petroleum Reserve (SPR) cavern and well creep-closure tests, 9:27875 (R;US)
Marine Disposal
Geopressured brine disposal. Final report, Nov 81-Sep 83, 9:27864 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1982-November 1983. Volume I, 9:27867 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry site, May 1982-November 1983. Volume II, Appendices, 9:27868 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1983-November 1983. Volume III, Executive Summary, 9:27869 (R;US)
Underground Disposal
Geopressured brine disposal. Final report, Nov 81-Sep 83, 9:27864 (R;US)

BRITISH NUCLEAR FUELS LIMITED
See BNFL

BROMINATED ALIPHATIC HYDROCARBONS
Carcinogenesis
Testimony presented to the Massachusetts Department of Public Health, March 19, 1984, Jamaica Plain, Massachusetts, 9:29466 (R;US)

BROMINE
Chemical Reactions
Oxydesulfurization of coal: further studies of oxy-alkalinolysis, 9:27772 (R;US)
Uranium 238 Reactions
Angular correlations between target and projectile fragments emitted from ^{238}U + Ag(Br) collisions at 0.85 A GeV, 9:29773 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

BROMINE 74
Energy-Level Transitions
Particle multiplets and collective excitations in the odd-odd nucleus ^{74}Br, 9:29757 (R;DE;In German)

BROMINE 76
Hot Atom Chemistry
Reactions with aromatic compounds of recoiling bromine atoms formed from the /sup 76,77/Kr → /sup 76,77/Br transformations. Liquid-phase reactions, 9:28968 (J;US)

BROMINE 77
Hot Atom Chemistry
Reactions with aromatic compounds of recoiling bromine atoms formed from the /sup 76,77/Kr → /sup 76,77/Br transformations. Liquid-phase reactions, 9:28968 (J;US)

BROMINE 82
Tracer Techniques
Determination of the self purification of streams using tracers, 9:29287 (R;BR;In Portuguese)

BROMINE BROMIDES

BROWN COAL
Hydrogenation
Report on the construction of the pilot plant for hydrogasification of coal as part of the PNP-project, 9:27714 (R;DE;In German)

BROWNS FERRY-1 REACTOR
Radioactive Waste Storage
Browns Ferry Nuclear Plant low-level radwaste storage facility ground-water pathway analysis, 9:28384 (R;US)

BROWNS FERRY-2 REACTOR
Radioactive Waste Storage
Browns Ferry Nuclear Plant low-level radwaste storage facility ground-water pathway analysis, 9:28384 (R;US)

BROWNS FERRY-3 REACTOR
Radioactive Waste Storage
Browns Ferry Nuclear Plant low-level radwaste storage facility ground-water pathway analysis, 9:28384 (R;US)

BTU METERS
See HEAT METERS

BUBBLE CHAMBERS
Data Analysis
High Energy Physics Group. Annual progress report, fiscal year 1983, 9:29590 (R;US)

BUCKLING (STRUCTURAL)
See DEFORMATION

BUDR
Biological Effects
Interaction of Hoechst 33258 and BrdU substituted DNA in the formation of sister chromatid exchanges, 9:29367 (J;DE)
Fluorescence
Flow cytometric analysis of bromodeoxyuridine-substituted cells stained with 33258 Hoechst, 9:29363 (J;US)
Synergism
Interaction of Hoechst 33258 and BrdU substituted DNA in the formation of sister chromatid exchanges, 9:29367 (J;DE)

BUILDING (MANUFACTURING)
See FABRICATION

BUILDING MATERIALS
See also BRICKS
CEMENTS
CONCRETES
Consumer Protection
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
Heat Transfer
Surface heat transfer in building components, 9:28620 (BA;US)
Thermal Conductivity
Surface heat transfer in building components, 9:28620 (BA;US)

Air Conditioning
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)
Air Flow
Design guidelines on lateral airflow through and around buildings, 9:28597 (BA;GB)

Air Infiltration
Repeatability and accuracy of pressurization testing, 9:28617 (BA;US)
Air Pollution Control
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
Comparative Evaluations
Equivalent annualized cost evaluation for energy-efficient building component evaluation, 9:28619 (BA;US)
Computer-Aided Design
Numerical optimization of building subsystems with extreme and design weather conditions, 9:28618 (BA;US)
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)
Cooling Systems
Habitability and energy performance of earth sheltered dwellings, 9:28661 (J;US)
Design
Development and application of a merged solar and meteorological data base, 9:28624 (BA;US)
Equivalent annualized cost evaluation for energy-efficient building component evaluation, 9:28619 (BA;US)
Exploitation of ground climate for energy efficient building design, 9:28660 (J;US)
Energy Conservation
Equivalent annualized cost evaluation for energy-efficient building component evaluation, 9:28619 (BA;US)
Impact of building envelopes on energy consumption and energy design guidelines, 9:28615 (BA;US)
Local initiatives in building energy conservation: the role of local government and current activities in eleven cities, 9:28573 (R;US)
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)
Energy Consumption
Southwest thermal mass study. The effect of envelope thermal mass on the heating energy use of eight test buildings in a high desert climate. Research phase I, September 1981 through December 1982, 9:28580 (R;US)
Energy Efficiency
Exploitation of ground climate for energy efficient building design, 9:28660 (J;US)
Habitability and energy performance of earth sheltered dwellings, 9:28661 (J;US)
The cost of conserved energy as an investment statistic, 9:28596 (J;CH)
Energy Management Systems
Calibration of temperature measurement systems installed in buildings. Building science series (final), 9:28589 (R;US)
Heat Flow
Use of large-area heat-flow meters to measure building heat flows, 9:28607 (BA;US)
Heating Load
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Heating Systems
Habitability and energy performance of earth sheltered dwellings, 9:28661 (J;US)
Indoor Air Pollution
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
Life-Cycle Cost
Equivalent annualized cost evaluation for energy-efficient building component evaluation, 9:28619 (BA;US)
Moisture
Indoor moisture: effects on structure, comfort, energy consumption, and health, 9:28604 (BA;US)
Net Energy
Use of large-area heat-flow meters to measure building heat flows, 9:28607 (BA;US)
Scale Models
Determination of thermal simulation performance with a reduced-scale structure, 9:28610 (BA;US)
Space Heating
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)
Thermal Efficiency
Determination of thermal simulation performance with a reduced-scale structure, 9:28610 (BA;US)
Numerical optimization of building subsystems with extreme and design weather conditions, 9:28618 (BA;US)
Repeatability and accuracy of pressurization testing, 9:28617 (BA;US)
Surface heat transfer in building components, 9:28620 (BA;US)
Thermal Insulation
Effects of infrared radiation barriers on the effective thermal resistance of building envelopes, 9:28608 (BA;US)
Thermal flux measurements with a compensated heat flow meter, 9:28606 (BA;US)
Thermal Mass
Southwest thermal mass study. The effect of envelope thermal mass on the heating energy use of eight test buildings in a high desert climate. Research phase I, September 1981 through December 1982, 9:28580 (R;US)
Ventilation
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
Study of the external wind pressure distributions and induced internal ventilation flow in low-rise industrial and domestic structures, 9:28583 (R;US)
Waste Heat Utilization
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Windows
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)

Computer Codes
Description and assessment of RAMONA-3B Mod.0 Cycle 4: a computer code with three-dimensional neutron kinetics for BWR system transients, 9:28268 (R;US)
Containment Systems
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Control Rooms
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Cost Benefit Analysis
Severe accident risk benchmarking and cost-benefit analysis, 9:28455 (R;US)
Engineered Safety Systems
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Fuel Assemblies
QUAD+ BWR Fuel Assembly demonstration program at Browns Ferry plant, 9:28272 (R;US)
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)
Fuel Cans
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Fuel Elements
Use of a heat transfer coefficient for describing the radiactive exchange between water vapour and the bounding walls. Final report, 9:28454 (R;US)
Fuel Rods
Evaluation of power reactor fuel rod analysis capabilities. Phase 2 topical report. Volume 1. Data evaluation, 9:28269 (R;US)
Examination of fuel assembly for water cooled power reactors, 9:28264 (R;AT)
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
In Core Instruments
Computerized automatic tip scanning operation, 9:28369 (J;US)
Development of an extended range start-up monitor (ERSM) for boiling water reactions, 9:28368 (J;US)
Position-sensitive fission counter for in-core flux profile monitoring, 9:28376 (J;US)
Loss of Coolant
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Verification of the MOXY code in WRAP for thermal analysis of fuel assemblies in a boiling water reactor during a loss-of-coolant accident, 9:28408 (R;US)
Meetings
Scientific research and production introduction studies for light water reactor power plants. Volume 3. dil, 9:28263 (R;CS;CZ)
Neutron Monitors
Computerized automatic tip scanning operation, 9:28369 (J;US)
Personnel
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Review of maintenance personnel practices at nuclear power plants, 9:28271 (R;US)
Pressure Vessels
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)
Primary Coolant Circuits
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Radioactive Effluents
Rapid determination of noble gas radionuclide concentrations in power reactor plumes, 9:29249 (J;GB)
Reactor Accidents
Identification of equipment and components predicted as significant contributors to severe core damage, 9:28449 (R;US)
In-plant postaccident radiation transport. Final report, May 1984, 9:28414 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Use of a heat transfer coefficient for describing the radiactive exchange between water vapour and the bounding walls. Final report, 9:28454 (R;US)
Reactor Control Systems
Computerized automatic tip scanning operation, 9:28369 (J;US)
Nuclear system test simulator, 9:28370 (J;US)
Reactor Instrumentation
Nuclear system test simulator, 9:28370 (J;US)
Reactor Internals
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Reactor Materials
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Licensee event report (LER) compilation. Volume 3, Number 3, 9:28435 (R;US)
Reactor Operators
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Reactor Protection Systems
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Reactor Safety
Value-impact analysis of selected safety modifications to nuclear power plants. Final report, 9:28410 (R;US)
Reactor Simulators
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)

Nuclear system test simulator, 9:28370 (J;US)
Risk Assessment
Severe accident risk benchmarking and cost-benefit analysis, 9:28455 (R;US)
Value-impact analysis of selected safety modifications to nuclear power plants. Final report, 9:28410 (R;US)
Transients
Description and assessment of RAMONA-3B Mod.0 Cycle 4: a computer code with three-dimensional neutron kinetics for BWR system transients, 9:28268 (R;US)
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:28409 (R;US)
Nuclear power plant transients: where are we, 9:28406 (R;US)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 3. Code structure structure and programming information, 9:28444 (R;US)
Water Hammer
Evaluation of water hammer occurrence in nuclear power plants: technical findings relevant to unresolved safety issue A-1, 9:28432 (R;US)
BYRON-1 REACTOR
Reactor Safety
Safety Evaluation Report related to the operation of Byron Station, Units 1 and 2 (Docket Nos. STN 50-454 and STN 50-455), 9:28431 (R;US)
BYRON-2 REACTOR
Reactor Safety
Safety Evaluation Report related to the operation of Byron Station, Units 1 and 2 (Docket Nos. STN 50-454 and STN 50-455), 9:28431 (R;US)

Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization (By country, number, capacity (MWe) and age, utilities and industrial design), 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary (Number and total MWe of boilers less than 20 years old by country cooperating), 9:27827 (R;US)
Nuclear Industry
Publications catalogue 1982-83, 9:28259 (R;CA)
Research Programs
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Site Surveys
Development and application of a merged solar and meteorological data base, 9:28624 (BA;US)
CANADIAN NRU REACTOR
See NRU REACTOR
CANCER
See NEOPLASMS
CANDU TYPE REACTORS
Economics
CANDU-PHW reactor in relation to a Second Nuclear Era, 9:28450 (R;US)
In Core Instruments
A computer-controlled Travelling Flux Detector system for CANDU reactors, 9:28373 (J;US)
Nuclear Trade
Exporting apocalypse: CANDU reactors and nuclear proliferation, 9:28294 (R;CA)
Reactor Licensing
CANDU-PHW reactor in relation to a Second Nuclear Era, 9:28450 (R;US)
Risk Assessment
CANDU-PHW reactor in relation to a Second Nuclear Era, 9:28450 (R;US)
Specifications
CANDU-PHW reactor in relation to a Second Nuclear Era, 9:28450 (R;US)
CARBAMATES
Toxicity
DNA repair studies in mammalian germ cells, 9:29487 (RA;US)
CARBINOL
See METHANOL
CARBON
See also ACTIVATED CARBON
CARBON BLACK
GRAPHITE
PYROLYTIC CARBON
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Aerosols
Biogenic and anthropogenic carbonaceous aerosols and their precursors within a forest canopy, 9:29195 (R;US)
Ecological Concentration
Worldwide organic soil carbon and nitrogen data, 9:29260 (R;US)
Electron Collisions
Measurement of the linear polarization of the photons in the elementary processes of bremsstrahlung production, 9:29562 (R;DE;In German)
CARBON 11
Hot Atom Chemistry
Reaction selectivity of translationally and electronically excited carbon-11 atoms with ethylene, 9:28969 (J;US)
CARBON 12 REACTIONS
Compound-Nucleus Reactions
Angular-momentum-dependent fission barriers in the rare-earth region, 9:29787 (J;US)
Elastic Scattering
Complex WKB solutions for $^{12}C+^{12}C$ scattering, 9:29736 (RA;US)
Fission
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
Heavy Ion Reactions
Production of light fragments with high P/sub T/ at cm 90 degrees in 800 MeV/nucleon $^{12}C + ^{12}C$ collisions, 9:29735 (RA;US)
Search for unstable superdense nuclei at the Dubna synchrophasotron, 9:29795 (RA;US)
Multiple Production
Collective effects in subthreshold pion production, 9:29771 (RA;US)
Particle Production
Coincidence experiments between pions (π/sup +-/) and forward charged particles from intermediate energy heavy ion collisions, 9:29734 (RA;US)
Spallation
Anomalous mean free path for Z=2 relativistic projectile fragments in emulsion, 9:29726 (RA;US)
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
Particle-gamma coincidence measurements in $^{12}C + ^{12}C$ and ^{12}C + Pb collisions at 2.1 GeV/A incident energy, first results - γ-ray spectrum, 9:29732 (RA;US)

Search for anomalon decay by radiochemical methods, 9:29762 (RA;US)

CARBON 12 TARGET

Carbon 12 Reactions

Coincidence experiments between pions (π/sup +-/) and forward charged particles from intermediate energy heavy ion collisions, 9:29734 (RA;US)

Complex WKB solutions for $^{12}C+^{12}C$ scattering, 9:29736 (RA;US)

Particle-gamma coincidence measurements in $^{12}C + ^{12}C$ and ^{12}C + Pb collisions at 2.1 GeV/A incident energy, first results - γ-ray spectrum, 9:29732 (RA;US)

Production of light fragments with high P/sub T/ at cm 90 degrees in 800 MeV/nucleon $^{12}C + ^{12}C$ collisions, 9:29735 (RA;US)

Lithium 6 Reactions

Phenomenological parametrization of a reduced width function in alpha-transfer reactions, 9:29719 (RA;SU;In Russian)

CARBON 13

Nuclear Magnetic Resonance

Aspects of reaction of N-oxide radical with ethers in ^{13}C NMR spectrum, 9:28929 (RA;PL;In Polish)

Influence of substitution on chemical shifts C-13 in alkyl derivatives, 9:28944 (RA;PL;In Polish)

Study of regioselectivity of reaction of donor centres of enamines R_1-C_1O-C_2 = C_3-NHR_2 using NMR, 9:28932 (RA;PL;In Polish)

Temperature dependence of screening of ^{13}C nuclei in simple aliphatic alcohols, 9:28935 (RA;PL;In Polish)

Use of T_1 relaxation times and Overhauser effect of ^{13}C and ^{31}P nuclei to study molecules reorientation and intramolecular motions of phosphororganic compounds, 9:28941 (RA;PL;In Polish)

Spin-Lattice Relaxation

Use of T_1 relaxation times and Overhauser effect of ^{13}C and ^{31}P nuclei to study molecules reorientation and intramolecular motions of phosphororganic compounds, 9:28941 (RA;PL;In Polish)

CARBON 16

Beta-Minus Decay

O^+ reversible O^- transitions in A=16, 9:29715 (R;US)

CARBON BLACK

Liquid Column Chromatography

Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials, 9:27791 (R;US)

Mutagen Screening

Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials, 9:27791 (R;US)

Solvent Extraction

Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials, 9:27791 (R;US)

Toxicity

Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials, 9:27791 (R;US)

CARBON CYCLE

Global Aspects

Atmospheric retention of anthropogenic CO_2: scenario dependence of the airborne fraction. Final report, 9:29207 (R;US)

Research Programs

Department of Energy Global Carbon Cycle Program, 9:29212 (RA;US)

CARBON DIOXIDE

Biodegradation

Effects of fly ash on microbial CO_2 evolution from an agricultural soil, 9:29266 (J;NL)

Chemical Reaction Kinetics

Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)

Decomposition

Thermochemical energy transport systems study, 9:28190 (R;US)

Ecological Concentration

Atmospheric retention of anthropogenic CO_2: scenario dependence of the airborne fraction. Final report, 9:29207 (R;US)

Electric Conductivity

On-line analysis of ultra low-level CO_2 concentrations in gas streams, 9:28884 (J;US)

Environmental Impacts

Response to W.W. Kellogg "Carbon Dioxide and Climatic Change: Implications for Mankind's Future". Rev.1, 9:29225 (R;US)

Flux Density

Sulfur dioxide, carbon dioxide, and water vapor flux measurements utilizing a microprocessor controlled data acquisition system in a pine plantation. Rev. 2, 9:29206 (R;US)

Gas Chromatography

On-line analysis of ultra low-level CO_2 concentrations in gas streams, 9:28884 (J;US)

Infrared Spectra

On-line analysis of ultra low-level CO_2 concentrations in gas streams, 9:28884 (J;US)

Methanation

On-line analysis of ultra low-level CO_2 concentrations in gas streams, 9:28884 (J;US)

Monitoring

Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)

Solvent Extraction

Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)

Temperature Effects

Terrestrial ecology, 9:29188 (RA;US)

CARBON DIOXIDE INJECTION

Planning

Geologic investigations in support of a proposed carbon dioxide miscible flood in the MCA unit Maljamar-Grayburg/San Andres Pool, Lea County, New Mexico. Final report, 9:27845 (R;US)

CARBON DIOXIDE LASERS

Waveguides

Design and operation of a CO_2 waveguide laser, 9:29002 (RA;IL)

CARBON FLUORIDES

Electron Attachment

Pressure-dependent electron attachment and breakdown strengths of unitary gases, and synergism of binary gas mixtures: a relationship, 9:29552 (R;US)

CARBON MONOXIDE

Atmospheric Chemistry

Atmosphere as stockroom and pre-reactor for gas-liquid reactions, 9:29186 (R;US)

Chemical Reactions

Use of pulse radiolysis to measure high temperature kinetics, 9:28962 (R;US)

Desorption

Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)

Emission Spectroscopy

Vibrational spectra of CO on Ni (100) studied by infrared emission spectroscopy, 9:29570 (R;US)

Hydrogenation

Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)

Crystallite size and support effects on CO hydrogenation reactions. Final progress report, January 1, 1982-August 30, 1984, 9:28027 (R;US)

Methanation

Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:28040 (J;US)

Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)

Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic

feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)
Monitoring
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
Reduction
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)
Synthesis
Flash pyrolysis of biomass with reactive and non-reactive gases, 9:28012 (R;US)
Vibrational States
Vibrational spectra of CO on Ni (100) studied by infrared emission spectroscopy, 9:29570 (R;US)

CARBON MONOXIDE LASERS
Electrical Pumping
Microwave discharge in a supersonic flow for the excitation of a gasdynamic CO-laser, 9:29000 (R;DE;In German)

CARBON NITRIDES
Electronic Structure
Molecular properties from MCSCF-SCEP wave functions. II. Calculation of electronic transition moments, 9:29575 (J;US)
Energy-Level Transitions
Molecular properties from MCSCF-SCEP wave functions. II. Calculation of electronic transition moments, 9:29575 (J;US)

CARBON STEELS
Corrosion
Corrosion behavior of low-carbon steels in Grande Ronde basalt groundwater in the presence of basalt-bentonite packing, 9:28792 (R;US)
Evaluation of iron-base materials for waste package containers in a salt repository, 9:27950 (R;US)
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Catalytic Effects
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)

CARBOXYLIC ACID ESTERS
Chemical Shift
Influence of substitution on chemical shifts C-13 in alkyl derivatives, 9:28944 (RA;PL;In Polish)

CARBOXYLIC ACIDS
See also AMINO ACIDS
Chemical Shift
Influence of substitution on chemical shifts C-13 in alkyl derivatives, 9:28944 (RA;PL;In Polish)
Separation Processes
Separation of certain carboxylic acids utilizing cation exchange membranes, 9:28890 (P;US)

CARBOXY-LYASES
Code number 4.1.1.
Amino Acid Sequence
Protein chemistry and enzyme mechanisms, 9:29340 (RA;US)
Biochemical Reaction Kinetics
Protein chemistry and enzyme mechanisms, 9:29340 (RA;US)
Molecular Structure
Protein chemistry and enzyme mechanisms, 9:29340 (RA;US)

CARCINOEMBRYONIC ANTIGEN
Amino Acid Sequence
Tumor cell surface proteins, 9:29409 (RA;US)
Radioimmunoassay
Tumor cell surface proteins, 9:29409 (RA;US)

CARCINOGEN SCREENING
Correlations
Comparative mutagenesis, 9:29341 (RA;US)

CARCINOMAS
Radioinduction
Recent cases of radium-induced malignancy, 9:29419 (RA;US)

CASCADE MOUNTAINS
Gravity Surveys
Preparation of residual gravity maps for the southern Cascade Mountains, Washington using Fourier analysis, 9:28200 (R;US)
Principal facts and a discussion of terrain correction methods for the complete Bouguer gravity anomaly map of the Cascade Mountains, Washington, 9:28201 (R;US)

CASCADE REACTORS
Breeding Blankets
Shock propagation through the Cascade ICF reactor Li_2O-pebble blanket, 9:30037 (J;US)

CASCADE SOLAR CELLS
Absorption Spectra
Quantum well multijunction photovoltaic cell, 9:28087 (P;US)
Design
Quantum well multijunction photovoltaic cell, 9:28087 (P;US)
Superlattices
Superlattice structures grown by molecular beam epitaxy, 9:28079 (R;US)

CASINGS (WELL)
See WELL CASINGS

CAT SCANNING
CAT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28298 (R;US)

CATALYSIS
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)

CATALYSTS
Chemical poisoning in model heterogeneous reactions. Final report, May 1, 1977-April 30, 1983, 9:28901 (R;US)
Catalyst Supports
Zeolite supported Ru in the F-T synthesis: effect of zeolite type, 9:28014 (RA;US)
Chemical Preparation
Catalyst and reactor development for a slurry phase Fischer-Tropsch process, 9:28023 (RA;US)
Fischer-Tropsch slurry catalyst development, 9:28017 (RA;US)
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:28018 (RA;US)
Liquid hydrocarbon fuels from syngas, 9:28016 (RA;US)
Particle synthesis and properties of zeolite catalysts for synthesis gas - gasoline conversion, 9:28015 (RA;US)
Zeolite supported Ru in the F-T synthesis: effect of zeolite type, 9:28014 (RA;US)
Coal Gasification Plants
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Comparative Evaluations
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)

Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)
Cooling
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:28043 (RA;US)
Crystal Structure
Particle synthesis and properties of zeolite catalysts for synthesis gas - gasoline conversion, 9:28015 (RA;US)
Particle Size
Particle synthesis and properties of zeolite catalysts for synthesis gas - gasoline conversion, 9:28015 (RA;US)
Performance Testing
Fischer-Tropsch slurry catalyst development, 9:28017 (RA;US)
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:28018 (RA;US)
Liquid hydrocarbon fuels from syngas, 9:28016 (RA;US)
Recovery
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:28043 (RA;US)
Reduction
Fischer-Tropsch slurry catalyst development, 9:28017 (RA;US)
Specificity
Fischer-Tropsch slurry catalyst development, 9:28017 (RA;US)
Impact of developing technology on indirect liquefaction, 9:28020 (RA;US)
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:28018 (RA;US)
Liquid hydrocarbon fuels from syngas, 9:28016 (RA;US)
Zeolite supported Ru in the F-T synthesis: effect of zeolite type, 9:28014 (RA;US)
Testing
Utilization of the hydrogen-microautoclave in support of the coal liquefaction process, topical report No. 9. Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama, 9:27761 (R;US)

CATALYTIC COMBUSTORS
Chemical Reactions
Mechanistic and kinetic studies of the elementary processes in catalytic combustion of methane. Annual report, 1 Sep 82-31 Aug 83, 9:27831 (R;US)

CATALYTIC CRACKING
Catalysts
Nuclear magnetic resonance investigation of fluorinated oxide catalysts, 9:28963 (J;US)

CATARACTS
Radioinduction
Accelerated heavy particles and the lens. 1. Cataracogenic potential, 9:29457 (J;US)

CATECHOL
See PYROCATECHOL

CATHODES
Filaments
Rigid indented cylindrical cathode for x-ray tube, 9:29050 (P;US)

CAVITY RECEIVERS
Convection
Estimating convective energy losses from solar central receivers, 9:28130 (R;US)
Energy Losses
Estimating convective energy losses from solar central receivers, 9:28130 (R;US)

CEA (ANTIGEN)
See CARCINOEMBRYONIC ANTIGEN

CEILINGS
Thermal Efficiency
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)
Thermal Testing
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)

CELL DIFFERENTIATION
Biochemistry
Regulation of gene expression, 9:29405 (RA;US)
Genetic Control
Regulation of gene expression, 9:29405 (RA;US)

CELL FLOW SYSTEMS
Cytological Techniques
Flow cytometric analysis of bromodeoxyuridine-substituted cells stained with 33258 Hoechst, 9:29363 (J;US)
Design
Three-color fluorescence measurements on single cells excited at three laser wavelengths, 9:29358 (J;US)
Particle Discrimination
Three-color fluorescence measurements on single cells excited at three laser wavelengths, 9:29358 (J;US)
Uses
Cytometrics, 9:29357 (RA;US)

CELL GROWTH (ANIMAL)
See ANIMAL CELLS GROWTH

CELL GROWTH (PLANT)
See GROWTH PLANT CELLS

CELL MEMBRANES
Biochemistry
Plasma membrane reorganization induced by chemical transformation in cultura, 9:29327 (R;US)
Biological Repair
Responses of red blood cell-membrane systems: temperature and calcium effects on volume, deformability, and osmotic fragility as studied by resistive pulse spectroscopy, 9:29354 (R;US)
Biophysics
Plasma membrane reorganization induced by chemical transformation in cultura, 9:29327 (R;US)
Responses of red blood cell-membrane systems: temperature and calcium effects on volume, deformability, and osmotic fragility as studied by resistive pulse spectroscopy, 9:29354 (R;US)
Charge Transport
Born energy problem in bacteriorhodopsin, 9:29349 (J;US)
Ion Channeling
Born energy problem in bacteriorhodopsin, 9:29349 (J;US)
Proteolysis
Identification by peptide analysis of the spectrin-binding protein in human erythrocytes, 9:29352 (J;US)

CELL PROLIFERATION
Age Dependence
Effect of age on the spermatogonial stem cell population of the mouse, 9:29450 (RA;US)

CELLS (ANIMAL)
See ANIMAL CELLS

CELLS (BACTERIAL)
See BACTERIA

CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS

CELLS (PLANT)
See PLANT CELLS

CELLULASE
Code number 3.2.1.4.
Biosynthesis
Chemical Process Research and Development Program. FY 1983 annual report, 9:28855 (R;US)

CELLULASES
See CELLULASE

CELLULOSE
Acid Hydrolysis
Cellulose-ethanol commercialization. Final report, 9:28047 (R;US)
Enzymatic Hydrolysis
Cellulose-ethanol commercialization. Final report, 9:28047 (R;US)
Method of saccharifying cellulose, 9:28049 (P;US)

CEMENTS
See also GYPSUM CEMENTS
Comparative Evaluations
Waste form development program. Annual report, October 1982-September 1983, 9:27934 (R;US)

CENTRAL RECEIVER TEST FACILITY
DOE's test facility at Sandia Laboratories.

Computerized Simulation
Dynamic simulation model of the Solar Thermal Test Facility (STTF): preliminary description, 9:28098 (R;US)

CENTRAL RECEIVERS
Heat Storage
Direct absorption receiver, 9:28131 (R;US)
Molten Salts
Alternate central receiver power system, Phase II. Volume II. Molten salt receiver. Final report, 9:28128 (R;US)
Solar Absorbers
Direct absorption receiver, 9:28131 (R;US)
Testing
Alternate central receiver power system, Phase II. Volume II. Molten salt receiver. Final report, 9:28128 (R;US)

CENTRIFUGAL PUMPS
Performance Testing
Application of the single discharge slurry pump to the waste removal program, 9:27937 (R;US)
Seals
Mechanical seal program, 9:27939 (R;US)

CERAMICS
Microstructure
Microstructural characterization of nuclear waste ceramics, 9:27965 (BA;US)
Processing
Acid-base properties of ceramic powders, 9:28812 (BA;US)
Uses
Ceramics for fusion devices, 9:30010 (R;US)

CERIUM
X-Ray Spectroscopy
Rare earth aerosol analysis by XRF, 9:29233 (RA;US)

CERIUM FLUORIDES
Precipitation
Two-stage precipitation of cerium trifluoride, 9:27911 (R;US)
Solubility
Two-stage precipitation of cerium trifluoride, 9:27911 (R;US)

CESIUM
Sorption
Prediction parameters of radionuclide retention at low-level radioactive waste sites, 9:27973 (R;US)

CESIUM 137
Biological Accumulation
Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil, 9:29432 (R;BR;In Portuguese)
Biological Indicators
Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil, 9:29432 (R;BR;In Portuguese)
Ion Exchange
Reduction of radiostrontium mobility in acid soils by carbonate treatment, 9:29280 (J;US)

CESIUM 144
Radionuclide Migration
Radionuclide fate and effects, 9:29275 (RA;US)

CESIUM COMPOUNDS
Nuclear Magnetic Resonance
About study of fibrous hydrates of isopolytrimolybdates by proton NMR method of broad lines, 9:28905 (RA;PL;In Polish)

CHALKS
See LIMESTONE

CHANNELS (REACTOR)
See REACTOR CHANNELS

CHARGED PARTICLE DETECTION
See also ALPHA DETECTION
MUON DETECTION
Semiconductor Detectors
Proposal for a semiconductor high resolution tracking detector, 9:29145 (J;NL)

CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.
See also ALPHA PARTICLES
DEUTERONS
IONS
TRITONS
Coherent Radiation
Electromagnetic radiation during the flight of relativistic particles through a small section of the force field, 9:29670 (R;XJ;In Russian)
Equations of Motion
Equations of motion for a radiating charged particle in electromagnetic fields on curved spacetime, 9:29891 (R;IT)
Meetings
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
Research Programs
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)

CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS
CHARGED PARTICLES

CHARM PARTICLES
See also CHARMED MESON RESONANCES
Particle Decay
Neutrino physics at Fermilab, 9:29623 (BA;US)

CHARMED MESON RESONANCES
Particle Production
Recent results on prompt electron production at PEP, 9:29610 (R;US)
Semileptonic Decay
Recent results on prompt electron production at PEP, 9:29610 (R;US)

CHARS
Activation Energy
Effect of time/temperature history on char reactivity, 9:27717 (R;US)
Chemical Reaction Kinetics
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Gasification
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Effect of time/temperature history on char reactivity, 9:27717 (R;US)

CHELATING AGENTS
See also EDTA
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)

CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
MULTI-ELEMENT ANALYSIS
Interlaboratory Comparisons
Elemental analysis round robin (In coal liquids; includes different methods), 9:27736 (RA;US)
Manuals
Manual of analytical methods used at Mintek. Special pub, 9:29529 (R;US)

CHEMICAL EFFLUENTS
Biological Accumulation
Mobilization, fate and effects of chemical wastes, 9:29264 (RA;US)
Biological Pathways
Mobilization, fate and effects of chemical wastes, 9:29264 (RA;US)
Monitoring
Environmental monitoring report: Morgantown Energy Technology Center, calendar year 1983, 9:29204 (R;US)

CHEMICAL EXPLOSIONS
Research Programs
Analysis plan for 1985 large-scale tests. Technical report, 9:29158 (R;US)

CHEMICAL EXPLOSIVES
See also PETN
TATB
TNT
Detonations
Shock sensitivity of 2-(5-cyanotetrazolato) pentaamine cobalt(III) perchlorate. Final report, 9:29160 (R;US)
Spectra of visible emission from detonating PETN and PBX 9407, 9:29162 (R;US)

Impact Tests
Shock characterization of explosive materials. Volume 2. 5-cyanotetrazolatopentaamine-cobalt(III) perchlorate (CP). Final report, 9:29159 (R;US)
Shock sensitivity of 2-(5-cyanotetrazolato) pentaamine cobalt(III) perchlorate. Final report, 9:29160 (R;US)
Neutron Radiography
Application of neutron radiation inspection at the Pantex Plant, 9:29166 (BA;NL)
Visible Spectra
Spectra of visible emission from detonating PETN and PBX 9407, 9:29162 (R;US)

CHEMICAL HEAT PUMPS
Technology Assessment
Survey and assessment of heat of reaction type chemical heat pumps, 9:28674 (R;US)

CHEMICAL LASERS
Scrubbers
Development of a solid fueled scrubber ejector for an hf/df chemical laser. Final report Apr-Oct 73, 9:28994 (R;US)

CHEMICAL MUTAGENS
See MUTAGENS

CHEMICAL PLANTS
See also GASOLINE PLANTS
Cooling Towers
Cooling towers: the overlooked energy conservation machine, 9:28671 (RA;US)

CHEMICAL PROPERTIES
Correlations
Rate of coal hydroliquefaction correlation to coal structure. Quarterly progress report, October-December 1983, 9:27767 (R;US)

CHEMICAL REACTION KINETICS
Computerized Simulation
Reaction of excited iodine atoms with methyl iodide: rate constant determinations, 9:28960 (J;US)
Temperature Dependence
Reaction of excited iodine atoms with methyl iodide: rate constant determinations, 9:28960 (J;US)

CHEMICAL REACTIONS

CHINA
Bilateral Agreements
Science and technology: cooperation between and United States and China. Hearings before the Special Subcommittee on US Trade with China, Ninety-Eighth Congress, first session, October 31, November 3, 1983, 9:28520 (B;US)
Harbors
Western US steam coal exports to the Pacific Basin: port and marine task group, 9:27823 (R;US)
Trade
Science and technology: cooperation between and United States and China. Hearings before the Special Subcommittee on US Trade with China, Ninety-Eighth Congress, first session, October 31, November 3, 1983, 9:28520 (B;US)

CHIRAL SYMMETRY
Symmetry Breaking
Spontaneously broken symmetries in nuclear physics, 9:29827 (RA;US)

CHLOR-ALKALI INDUSTRY
See CHLORINE

CHLORATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
NMR Spectra
Screening of ^{23}Na nuclei in $NaNO_3$ and $NaClO_3$ crystals, 9:28904 (RA;PL;In Polish)

CHLORIDES
See also AMMONIUM CHLORIDES
CALCIUM CHLORIDES
SODIUM CHLORIDES
THORIUM CHLORIDES
URANIUM CHLORIDES
Decomposition
Reaction of various metal oxides with hydrogen chloride and the reverse reactions, 9:28926 (TJ;US)
Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
Oxidation
Reaction of various metal oxides with hydrogen chloride and the reverse reactions, 9:28926 (TJ;US)

CHLORINATED ALIPHATIC HYDROCARBONS
Spin-Lattice Relaxation
Study of anisotropy of α,ω-dichloroderivatives n-paraffins, 9:28936 (RA;PL;In Polish)

CHLORINE
Argon 40 Reactions
Evidence on the equation of state of nuclear matter at high densities, 9:29834 (RA;US)
Pion spectra in the reaction Ar + KCl at 1.8 GeV/nucleon, 9:29742 (RA;US)
Two-pion correlations for 1.2 GeV/nucleon Ar on KCl, 9:29741 (RA;US)
Availability
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
Biological Effects
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

CHLORINE 35 TARGET
Proton Reactions
Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis, 9:29739 (R;DE;In German)
CHLORINE 37 TARGET
Proton Reactions
Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis, 9:29739 (R;DE;In German)
CHLORINE CHLORIDES

CLAYS
Thermal Conductivity
Determination of the thermal properties of clays in large-size samples, 9:27967 (TG;US)
Thermal Diffusivity
Determination of the thermal properties of clays in large-size samples, 9:27967 (TG;US)
CLIMATES
Forecasting
Response to W.W. Kellogg "Carbon Dioxide and Climatic Change: Implications for Mankind's Future". Rev.1, 9:29225 (R;US)
Isotope Ratio
Comparison between isotopic records in deep-sea cores and in ice cores. Illustration of some problems with a simple climate model, 9:29520 (R;FR;In French)
Research Programs
Humidity/cloud-radiation feedback on possible climatic perturbation due to fossil fuel utilization. Technical progress report, 9:29202 (R;US)
CLOSED-CYCLE SYSTEMS
Feasibility Studies
Zero-discharge study, 9:27740 (RA;US)
CLOSTRIDIUM ACETOBUTYLICUM
Culture Media
Microbial mutagenesis and cell division, 9:29401 (RA;US)
CLOSTRIDIUM BUTYRICUM
Culture Media
Microbial mutagenesis and cell division, 9:29401 (RA;US)
CLOSURES
Stress Analysis
Dynamic structural analysis of a head assembly for a large loop-type LMFBR, 9:28403 (R;US)
CLOTHES WASHERS
Energy Consumption
Washer with electrolytic water dissociation. Final report, 9:28591 (R;US)
CLUSTERS (FUEL ELEMENTS)
See FUEL ELEMENT CLUSTERS
CLUSTERS (SOLID)
See SOLID CLUSTERS
CO2 FLOODING
See CARBON DIOXIDE INJECTION
COAL
See also BROWN COAL
SUBBITUMINOUS COAL
Activation Analysis
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Calorific Value
Analyses of tipple and delivered samples of coal collected during fiscal years 1982 and 1983 (Approximately 1700 coal samples), 9:27788 (R;US)
Chemical Analysis
Chemical analysis of coal by energy dispersive x-ray fluorescence utilizing artificial standards, 9:27792 (J;US)
Organic oxygen characterization of coal and coal liquids. Quarterly progress report, February-April 1984, 9:27786 (R;US)
Chemical Composition
Analyses of tipple and delivered samples of coal collected during fiscal years 1982 and 1983 (Approximately 1700 coal samples), 9:27788 (R;US)
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Chemical Properties
Rate of coal hydroliquefaction correlation to coal structure. Quarterly progress report, October-December 1983, 9:27767 (R;US)
Chemical Reaction Kinetics
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Chemistry
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
Combustion
Analysis of vapor formation from silica under coal combustion conditions, 9:27833 (R;US)
Chemical and toxicological characterization of organic constituents in fluidized-bed and pulverized coal combustion: a topical report, 9:27832 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Combustion Products
Formation and transformation of particulate polycyclic organic matter emitted from coal fired power plants and oil shale retorting. Final report, 9:27802 (R;US)
Comparative Evaluations
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Contract Management
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Conversion
High sulfur coal research at the SIUC Coal Technology Laboratory. Quarterly progress report, January 1-March 30, 1984, 9:27725 (R;US)
Deashing
Organic oxygen characterization of coal and coal liquids. Quarterly progress report, February-April 1984, 9:27786 (R;US)
Desulfurization
Oxydesulfurization of coal: further studies of oxy-alkalinolysis, 9:27772 (R;US)
TVA's SO_2 control options - today and tomorrow, 9:27801 (R;US)
Dielectric Properties
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Dissolution
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
Drying
Transient, moving-front phenomena in a multi-phase medium, 9:27780 (R;US)
Energy Consumption
Connecticut energy data, 9:28557 (R;US)
Energy Demand
Nonutility demand for coal. Volume 1. Industrial coal demand. Final report, 9:28542 (R;US)
Exports
Coal port analysis, 9:27820 (R;US)
Fluidized-Bed Combustion
Chemical and toxicological characterization of organic constituents in fluidized-bed and pulverized coal combustion: a topical report, 9:27832 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Fuel Feeding Systems
Pulverized coal metering, 9:27738 (RA;US)
Heating
Effect of thermal pretreatment of coal on the process of coking, 9:27773 (R;DE;In German)
Market
Nonutility demand for coal. Volume 2. Metallurgical and export coal demand, 9:27836 (R;US)
Metering
Pulverized coal metering, 9:27738 (RA;US)
Moisture
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Oxidation
Oxydesulfurization of coal: further studies of oxy-alkalinolysis, 9:27772 (R;US)

Particle Size
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Petrography
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Physical Properties
Rate of coal hydroliquefaction correlation to coal structure. Quarterly progress report, October-December 1983, 9:27767 (R;US)
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Prices
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Pyrolysis
Coal pyrolysis in flat, opposed jet combustion configurations. Interim technical progress report, September 1, 1982-August 31, 1983, 9:27763 (R;US)
Enhanced coal liquefaction by hydropyrolysis in supercritical fluids. Quarterly report, January-March 1984, 9:27764 (R;US)
Transient, moving-front phenomena in a multi-phase medium, 9:27780 (R;US)
Rail Transport
Freight network modeling system. Volume 1. Freight network equilibrium model - theory and validation, 9:28540 (R;US)
Reflectivity
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Research Programs
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Risk Assessment
Comparing the risk: nuclear energy, coal, natural radioactivity, 9:28524 (R;DE;In German)
Structural Chemical Analysis
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Sulfur Content
High sulfur coal research at the SIUC Coal Technology Laboratory. Quarterly progress report, January 1-March 30, 1984, 9:27725 (R;US)
Supercritical Gas Extraction
Enhanced coal liquefaction by hydropyrolysis in supercritical fluids. Quarterly report, January-March 1984, 9:27764 (R;US)
Supply and Demand
Nonutility demand for coal. Volume 2. Metallurgical and export coal demand, 9:27836 (R;US)
State energy data report. Consumption estimates, 1960-1982, 9:27855 (R;US)
Swelling
Analyses of tipple and delivered samples of coal collected during fiscal years 1982 and 1983 (Approximately 1700 coal samples), 9:27788 (R;US)
Trade
International coal trade model: executive summary, 9:27841 (R;US)
Western US steam coal exports to the Pacific Basin: port and marine task group (Data on 26 possible Western USA ports and terminal facilities), 9:27823 (R;US)

COAL DEPOSITS

Activation Analysis
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Ashes
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Coal Gasification Plants
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Petrography
Petrographic characterization of Kentucky coals. Final report. Part V. Pyrite size/form/microlithotype distribution in western Kentucky prepared coals and in channel samples from western Kentucky and western Pennsylvania, 9:27783 (R;US)
Resource Assessment
Coal bed methane potential of the Raton Mesa coal region, Raton Basin, Colorado, 9:27809 (R;US)
Stratigraphy
Coal bed methane potential of the Raton Mesa coal region, Raton Basin, Colorado, 9:27809 (R;US)

COAL FINES
Cleaning
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Combustion Control
Evaluation of an advanced dual-register coal burner for utility boiler NO/sub x/ control. Final report, 9:28255 (R;US)
Flotation
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)
Oxidation
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)
Recovery
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)
Separation Processes
Flow and design characteristics of the hydrocyclone for the recovery of coal fines. Final report, 9:27822 (R;US)

COAL GASIFICATION
See also FISCHER-TROPSCH/MOBIL PROCESS
GKT PROCESS
KOPPERS-TOTZEK PROCESS
TEXACO GASIFICATION PROCESS
Ashes
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Catalysts
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Chemical Reaction Kinetics
Gasification of black coal with air-steam mixtures in fixed bed under pressure with a view to underground gasification, 9:27774 (R;DE;In German)
Chemical Reaction Yield
Fluidized-bed gasification of peat, lignite, subbituminous, and pretreated bituminous coal. Final report Aug 76-Aug 83, 9:27777 (R;US)
Chemical Reactions
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Coal Gasification Plants
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Comparative Evaluations
Fluidized-bed gasification of peat, lignite, subbituminous, and pretreated bituminous coal. Final report Aug 76-Aug 83, 9:27777 (R;US)
Economics
Impact of developing technology on indirect liquefaction, 9:28020 (RA;US)
Fluidized Bed
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Numerical Analysis
Transient, moving-front phenomena in a multi-phase medium (Spherical coal block), 9:27780 (R;US)
Optimization
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Pilot Plants
Report on the construction of the pilot plant for hydrogasification of coal as part of the PNP-project, 9:27714 (R;DE;In German)

Process Solutions
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Tar
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Waste Water
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)
Water Treatment
Chemical Process Research and Development Program. FY 1983 annual report, 9:28855 (R;US)

COAL GASIFICATION PLANTS
Chemical Reactors
Great Plains ASPEN model development. Technical progress report, March 1-31, 1984 , 9:27727 (R;US)
Computerized Simulation
Great Plains ASPEN model development. Technical progress report, March 1-31, 1984 , 9:27727 (R;US)
Construction
Great Plains Coal Gasification Project. Technical quarterly report, 1st quarter, 1984 (Great Plains, Mercer County, North Dakota), 9:27723 (R;US)
Report on the construction of the pilot plant for hydrogasification of coal as part of the PNP-project, 9:27714 (R;DE;In German)
Corrosion
Corrosion in coal gasification systems, 9:27716 (R;US)
Cost
Status of the Great Plains coal gasification project, 9:27837 (R;US)
Data Acquisition Systems
Great Plains ASPEN model development. Technical progress report, March 1-31, 1984 , 9:27727 (R;US)
Design
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)
Engineering
Great Plains Coal Gasification Project. Technical quarterly report, 1st quarter, 1984 (Great Plains, Mercer County, North Dakota), 9:27723 (R;US)
Financial Incentives
Status of the Great Plains coal gasification project, 9:27837 (R;US)
Hot Gas Cleanup
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Slags
Viscosity of coal slags as a function of composition, temperature, and oxygen partial pressure, 9:27712 (R;US)
Start-Up
Great Plains Coal Gasification Project. Technical quarterly report, 1st quarter, 1984 (Great Plains, Mercer County, North Dakota), 9:27723 (R;US)
Waste Water
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)

SUPERCRITICAL GAS EXTRACTION
TSL PROCESS
Catalysts
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Chemistry
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
Coal Gasification Plants
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Coal Preparation
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
Correlations
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
Rate of coal hydroliquefaction correlation to coal structure. Quarterly progress report, October-December 1983, 9:27767 (R;US)
Environmental Impacts
Fossil Energy Program, 9:27803 (RA;US)
Experimental Data
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
International Cooperation
Coal liquefaction. Exxon donor solvent process + flexicoking program, 9:27715 (R;DE;In German)
Organic Solvents
Cooperative investigation by Auburn University and Cities Service Research and Development Company of combined coal and heavy resid processing. Quarterly report, October 15, 1983-January 15, 1984 (Use of petroleum residual fuels as organic solvents), 9:27762 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Process Solutions
Instrumental methods of analysis of sulfur compounds in synfuel process streams. Quarterly technical progress report, January-March 1984, 9:27785 (R;US)
Regression Analysis
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
Waste Water
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)
Yields
Cooperative investigation by Auburn University and Cities Service Research and Development Company of combined coal and heavy resid processing. Quarterly report, October 15, 1983-January 15, 1984 (Use of petroleum residual fuels as organic solvents), 9:27762 (R;US)
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)

COAL LIQUEFACTION PLANTS
Design
Impact of pilot plant operations and concurrent development efforts on the projected performance and economics of a commercial EDS facility, 9:27721 (R;US)
Economics
Impact of pilot plant operations and concurrent development efforts on the projected performance and economics of a commercial EDS facility, 9:27721 (R;US)
Residues
Kerr-McGee MAR case vs. Filter Cake MAR (BASE) case, 9:27748 (RA;US)
Makeup hydrogen production from filter cake or Kerr-McGee ash concentrate using an alternative coal feedstock, 9:27750 (RA;US)
Revised feed case vs base case using Texaco gasification, 9:27749 (RA;US)
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)

COAL LIQUIDS
Aging
Hydrogen bonding in asphaltenes and coal. Final report, 9:27784 (R;US)

Biological Effects
Barley growth in coal liquid and diesel liquid fuels from coal and oil: a comparison of potential toxic effects on barley, 9:29501 (J;NL)
Teratogenicity following inhalation exposure of rats to a high-boiling coal liquid, 9:27840 (J;GB)
Carcinogen Screening
Comparative mutagenesis, 9:29341 (RA;US)
Chemical Bonds
Hydrogen bonding in asphaltenes and coal. Final report, 9:27784 (R;US)
Chemical Composition
Chemical analysis and biological testing of materials from the EDS coal liquefaction process: a status report, 9:27778 (R;US)
Distillation
Round-robin study of distillation procedures, 9:27735 (RA;US)
Filtration
Filtration ash drying study, 9:27746 (RA;US)
Fractionation
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Hydrogenation
Hydrogen bonding in asphaltenes and coal. Final report, 9:27784 (R;US)
Quantitative assessment of the merits of internal lining for the expanded-bed hydrocracker. Final report, 9:27744 (RA;US)
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Utilization of the hydrogen-microautoclave in support of the coal liquefaction process, topical report No. 9. Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama, 9:27761 (R;US)
Infrared Spectra
Heteroatom speciation in coal liquefaction via FTIR coupled with liquid chromatography. Quarterly progress report, January 1-March 31, 1984, 9:27760 (R;US)
Inhalation
Teratogenicity following inhalation exposure of rats to a high-boiling coal liquid, 9:27840 (J;GB)
LC-Fining
Quantitative assessment of the merits of internal lining for the expanded-bed hydrocracker. Final report, 9:27744 (RA;US)
Liquid Column Chromatography
Heteroatom speciation in coal liquefaction via FTIR coupled with liquid chromatography. Quarterly progress report, January 1-March 31, 1984, 9:27760 (R;US)
Mutagen Screening
Chemical analysis and biological testing of materials from the EDS coal liquefaction process: a status report, 9:27778 (R;US)
Comparative mutagenesis, 9:29341 (RA;US)
Oxidation
Hydrogen bonding in asphaltenes and coal. Final report, 9:27784 (R;US)
Measurement of the physical structure of coal liquids via low-angle x-ray scattering. Final technical report, June 2, 1982-June 1, 1983, 9:27765 (R;US)
Physical Properties
Evaluation of the DECHEMA proposal for an SRC-I thermophysical properties data base software system, 9:27731 (RA;US)
Small Angle Scattering
Measurement of the physical structure of coal liquids via low-angle x-ray scattering. Final technical report, June 2, 1982-June 1, 1983, 9:27765 (R;US)
Thermodynamic Properties
Evaluation of the DECHEMA proposal for an SRC-I thermophysical properties data base software system, 9:27731 (RA;US)
Preliminary phase equilibrium model for the SRC-I process, 9:27732 (RA;US)
Toxicity
Systemic toxicology, 9:29490 (RA;US)
Viscosity
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Measurement of the physical structure of coal liquids via low-angle x-ray scattering. Final technical report, June 2, 1982-June 1, 1983, 9:27765 (R;US)

COAL MINERS
Accidents
Consequences of an expanded use of coal in the Federal Republic of Germany. Materials Vol. 3, 9:27838 (R;DE;In German)
Occupational Diseases
Consequences of an expanded use of coal in the Federal Republic of Germany. Materials Vol. 3, 9:27838 (R;DE;In German)

COAL MINES
Land Pollution
Coal mine related stream sediment geochemistry in southern Illinois. Technical report 1975-81, 9:29262 (R;US)
Water Pollution
Coal mine related stream sediment geochemistry in southern Illinois. Technical report 1975-81, 9:29262 (R;US)

COAL MINING
Abandoned Sites
Evaluation of a surface application of limestone for controlling acid mine discharges from abandoned strip mines, Sewellsville, Ohio. Final report, 9:27816 (R;US)
Land Reclamation
Environmental assessment of surface mining methods: head-of-hollow fill and mountaintop removal. Volume 1. Final report, Nov 75-Apr 80, 9:27804 (R;US)
Environmental assessment of surface mining methods head-of-hollow fill and mountaintop removal. Volume 2. Final report, Nov 75-Oct 81, 9:27805 (R;US)
Occupational Safety
Coal mine dust respiratory protective devices, 9:27839 (R;US)

COAL PREPARATION
High sulfur coal research at the SIUC Coal Technology Laboratory. Quarterly progress report, January 1-March 30, 1984, 9:27725 (R;US)
Research Programs
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)

COAL PREPARATION PLANTS
Waste Water
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)

COAL SEAMS
Deformation
Geologic disturbances in Illinois coal seams, 9:27810 (R;US)
Degassing
Coalbed methane recovery and utilization in the United States, 9:27814 (R;US)
Economic evaluation of directional drilling for methane drainage from coalbeds. Report of investigations/1984, 9:27818 (R;US)
Task 6 - field monitoring and evaluation of MRCP resource application. Technical progress report No. 47, 9:27813 (R;US)
Directional Drilling
Cornering water jet drill for creating horizontal holes in coal seams, 9:28988 (R;US)
Geology
Geologic disturbances in Illinois coal seams, 9:27810 (R;US)
Thickness
Coal bed methane potential of the Raton Mesa coal region, Raton Basin, Colorado, 9:27809 (R;US)

COAL TAR
Catalytic Cracking
Coal gasification and tar conversion reactions over calcium oxide. Annual progress report, November 1, 1982-October 31, 1983, 9:27726 (R;US)
Nuclear Magnetic Resonance
Coal gasification and tar conversion reactions over calcium oxide. Annual progress report, November 1, 1982-October 31, 1983, 9:27726 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Fuel Substitution
A modern alternative to oil-fired ships, 9:28709 (J;US)
Mathematical Models
Technical support for coal-fired gas turbine development effort, 9:29055 (R;US)
Turbine Blades
Present research advances in coal-burning gas turbines, 9:28692 (J;US)
COAL-FIRED MHD GENERATORS
Technology Assessment
Major remaining technical issues in coal-fired MHD technology, 9:28561 (R;US)
COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES
COALTEK PROCESS
See FUEL FEEDING SYSTEMS
COARSE MESH METHOD
See FINITE DIFFERENCE METHOD
COASTAL WATERS
Water Quality
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1982-November 1983. Volume I, 9:27867 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry site, May 1982-November 1983. Volume II, Appendices, 9:27868 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1983-November 1983. Volume III, Executive Summary, 9:27869 (R;US)
COATINGS
See also ANTIREFLECTION COATINGS
PAINTS
AR coating with high damage threshold on SiO_2 glass. Final report, 9:30026 (R;US)
Structural Chemical Analysis
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
COBALT
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
COBALT 59 TARGET
Deuteron Reactions
Modification of boundary conditions in an optical scattering model, 9:29752 (RA;SU;In Russian)
COBALT 60
Biological Accumulation
Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil, 9:29432 (R;BR;In Portuguese)
Biological Indicators
Uptake by benthic algae of critical radionuclides to be released in the liquid effluent of the Angra dos Reis Nuclear Power Plant, R.J., Brazil, 9:29432 (R;BR;In Portuguese)
Radionuclide Migration
Radionuclide fate and effects, 9:29275 (RA;US)
COBALT ALLOYS
See also ALLOY-MP35N
HASTELLOY X
INCONEL 617
RENE-100
Catalytic Effects
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Decomposition
Small-angle neutron scattering study of the decomposition of Fe-28Cr-10.5Co, 9:28743 (R;US)
Magnetization
Irreversible magnetization in Co-W thin films, 9:28784 (RA;IL)
Microstructure
Atom probe: a direct technique for kinetic measurements (Fe-24Cr; Fe-32Cr; Fe-28.5Cr-10.6Co), 9:28744 (R;US)
Phase Transformations
Atom probe: a direct technique for kinetic measurements (Fe-24Cr; Fe-32Cr; Fe-28.5Cr-10.6Co), 9:28744 (R;US)
COBALT COMPLEXES
Chemical Reactions
Elemental sulfur and selenium induced intramolecular carbyne-carbyne coupling in trinuclear bis(carbyne) cobalt clusters. A novel entry into metalladithiolenes and metalladiselenolenes, 9:28925 (J;US)
COBALT COMPOUNDS
See also COBALT FLUORIDES
COBALT SULFIDES
Chemical Reactions
Studies of the reactions of group 8 transition-metal ions Fe^+, Co^+, and Ni^+ with linear alkanes. Determination of reaction mechanisms and MC/sub n/H/sub 2n/$^+$ ion structures using Fourier transform mass spectrometry collision-induced dissociation, 9:28924 (J;US)
Crystal Structure
Sulfiding of cobalt molybdate catalysts: characterization by Raman spectroscopy, 9:27852 (J;US)
Infrared Spectra
Sulfiding of cobalt molybdate catalysts: characterization by Raman spectroscopy, 9:27852 (J;US)
NMR Spectra
Investigations of the second moment of NMR spectra line in solid solutions of fluoroperovskites $NH_4Cosub(x)Mgsub(1-x)F_3$, 9:28912 (RA;PL;In Polish)
Raman Spectra
Sulfiding of cobalt molybdate catalysts: characterization by Raman spectroscopy, 9:27852 (J;US)
Sulfidation
Sulfiding of cobalt molybdate catalysts: characterization by Raman spectroscopy, 9:27852 (J;US)
COBALT FLUORIDES
Relaxation
Spin dynamics near the magnetic percolation threshold, 9:28798 (J;US)
COBALT IONS
Reduction
Metallic cobalt and iron particles in large and medium pore zeolites. Methods of generation and ferromagnetic resonance characterization, 9:28899 (R;US)
COBALT SULFIDES
Catalytic Effects
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Economic Analysis
Simple economics of industrial cogeneration, 9:28687 (J;US)
Economics
Energy, capacity and economic effects of cogeneration interfaced with electric utility systems, 9:28690 (J;US)
Energy Efficiency
Energy, capacity and economic effects of cogeneration interfaced with electric utility systems, 9:28690 (J;US)
Environmental Impacts
Environmental aspects of district heating/cogeneration in the twin cities, 9:28695 (R;US)
Gas Turbines
Cogeneration for existing alfalfa processing, 9:28673 (R;US)
Steam Generators
The impact of New Source Performance Standards on advanced industrial energy technology, 9:29053 (J;US)
Technology Assessment
Simple economics of industrial cogeneration, 9:28687 (J;US)
COHERENT ACCELERATORS
Computerized Simulation
Computer simulation of the Lasertron, 9:29076 (R;US)

COILS (MAGNETIC)
See MAGNET COILS
COKE
Calcination
Comparison of coke calcining systems: rotary kiln (petrocarb) vs. rotary hearth (Marathon-Wise-Salem) (Green coke from delayed coking), 9:27747 (RA;US)
Compression Strength
Effect of thermal pretreatment of coal on the process of coking, 9:27773 (R;DE;In German)
Materials Handling Equipment
Comparison of hydrobin and gantry green-coke handling systems for the SRC-I demonstration plant, 9:27741 (RA;US)
COLD CATHODE TUBES
Vacuum Systems
Cold cathode gaseous ion source for pure vacuum systems, 9:30000 (RA;UA;In Russian)
COLD PLASMA
Magnetohydrodynamics
Kinetic theory of gases, magneto-fluid dynamics and their application. Interim 1 Dec 81-30 Nov 82, 9:29579 (R;US)
COLD-WATER PROCESSES
Waste Water
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
COLLECTIVE MODEL
Dyson Representation
Boson model with SU(3) symmetry as a simplified variant of symplectic collective model, 9:29810 (RA;SU;In Russian)
SP Groups
Boson model with SU(3) symmetry as a simplified variant of symplectic collective model, 9:29810 (RA;SU;In Russian)
COLLECTOR MODULE TEST FACILITY
See MSSTF
COLLECTRONS

COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Coal Gasification
Cost and performance for commercial applications of Texaco-based gasification/combined-cycle plants. Volume 1. Summary and discussion of results. Final report, 9:27770 (R;US)
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Coal-Fired Gas Turbines
Technical support for coal-fired gas turbine development effort, 9:29055 (R;US)
Cost
Cost and performance for commercial applications of Texaco-based gasification/combined-cycle plants. Volume 1. Summary and discussion of results. Final report, 9:27770 (R;US)
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Design
Cost and performance for commercial applications of Texaco-based gasification/combined-cycle plants. Volume 1. Summary and discussion of results. Final report, 9:27770 (R;US)
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Mathematical Models
Technical support for coal-fired gas turbine development effort, 9:29055 (R;US)
Operation
Development of an EPRI reliability assessment system (ERAS) for combined-cycle power plants, 9:28549 (R;US)
Performance
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Reliability
Development of an EPRI reliability assessment system (ERAS) for combined-cycle power plants, 9:28549 (R;US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION
Fly Ash
Chemical and toxicological characterization of organic constituents in fluidized-bed and pulverized coal combustion: a topical report, 9:27832 (R;US)
COMBUSTION PRODUCTS
Chemical Analysis
Analysis and assessment of incinerated municipal sludge ashes and leachates. Final report, Oct 79-Sep 81, 9:29497 (R;US)

Mutagen Screening
Analysis and assessment of incinerated municipal sludge ashes and leachates. Final report, Oct 79-Sep 81, 9:29497 (R;US)

COMBUSTION WAVES
Mathematical Models
Thin flame model for reactive flow in porous materials, 9:29016 (R;US)

COMMERCE (NUCLEAR)
See NUCLEAR TRADE

COMMERCIAL BUILDINGS
Air Infiltration
The air infiltration and ventilation rates in two large commercial buildings, 9:28657 (BA;US)
Cooling Load
The computerized commercial building energy and load management simulation analysis/audit system, 9:28656 (BA;US)
Energy Audits
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
The computerized commercial building energy and load management simulation analysis/audit system, 9:28656 (BA;US)
Energy Conservation
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
Heating Load
The computerized commercial building energy and load management simulation analysis/audit system, 9:28656 (BA;US)
Simulation
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
Solar Cooling Systems
Performance criteria for solar heating and cooling systems in commercial buildings, 9:28164 (R;US)
Solar Heating Systems
Performance criteria for solar heating and cooling systems in commercial buildings, 9:28164 (R;US)
Ventilation
The air infiltration and ventilation rates in two large commercial buildings, 9:28657 (BA;US)

COMMERCIAL SECTOR
Energy Conservation
Trends in the conservation of energy in the United States, 1965-1980, 9:28662 (J;US)

COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Cost
d-d Compact reversed field pinch reactor technology assessment, 9:30017 (RA;US)
Maintenance
Compact fusion reactors availability analysis, 9:30018 (RA;US)
Safety
d-d Compact reversed field pinch reactor technology assessment, 9:30017 (RA;US)
Safety comparison of d-d and d-t fueled fusion reactors, 9:30016 (RA;US)
Technology Assessment
d-d Compact reversed field pinch reactor technology assessment, 9:30017 (RA;US)

COMPOSITE MATERIALS
Acoustic Emission Testing
Comprehensive guide to the literature on acoustic emission from composites, 9:29031 (R;US)
Cryogenics
Standardizing nonmetallic composite materials for cryogenic applications, 9:28817 (BA;US)
Fracture Mechanics
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)
Porosity
On the estimation of porosity in composites by oblique angle illumination, 9:29035 (BA;US)
Quality Assurance
Quality-assurance tests of five Y-12 Kevlar-49 spools used to fabricate strands and reliability specimens for stress-rupture tests, 9:28814 (R;US)
Standardization
Standardizing nonmetallic composite materials for cryogenic applications, 9:28817 (BA;US)
Strains
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)
Ultrasonic Testing
On the estimation of porosity in composites by oblique angle illumination, 9:29035 (BA;US)

COMPOSITE MODELS
Complex Rishon-type unification, 9:29666 (RA;IL)

COMPOUND-NUCLEUS REACTIONS
Nuclear Models
Dissipative phenomena: fusion, fast fission and quasifission, 9:29804 (R;FR)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSED GASES
Corrosive Effects
Present research advances in coal-burning gas turbines, 9:28692 (J;US)

COMPRESSED WORK WEEK
See ALTERNATIVE WORK SCHEDULES

COMPRESSIBLE FLOW
Finite Element Method
Some applications of mixed finite elements to an ultra compressible or a two phase flow computations, 9:29010 (R;FR)
Many-Dimensional Calculations
Many-dimensional calculation of heat transfer and viscous fluid flow with the numerical Control Variables Method, 9:29011 (R;FR;In French)
Numerical Solution
Many-dimensional calculation of heat transfer and viscous fluid flow with the numerical Control Variables Method, 9:29011 (R;FR;In French)

COMPRESSORS
Energy Efficiency
Research and development of energy-efficient high back-pressure compressor, 9:28677 (R;US)

COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY

COMPUTER AXIAL TOMOGRAPHY SCANNING
See CAT SCANNING

COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
A Codes
ORNL ALPHAMA MIS programmer's manual, 9:30066 (R;US)
B Codes
Behaviour of beryllium in a tokamak fusion reactor, 9:30005 (R;DE)
Beta: a program for calculating and archiving backscattering profiles taken with the NOAA (National Oceanic and Atmospheric Administration) coherent lidar system. Technical memo, 9:29530 (R;US)
C Codes
CASMO: a computer program to calculate spent fuel and high-level waste transportation mileage and costs, 9:27918 (R;US)
CIRA economic optimization methodology, 9:28649 (BA;US)
E Codes
Historical method of seismic hazard analysis. Interim report, May 1984, 9:28381 (R;US)
L Codes
Linear Systems Analysis Program user's manual, Version 2.2 (VAX/VMS), 9:30086 (R;US)
M Codes
Development and experimental verification of a complex chemical equilibrium model for waters using the river Rhine water as an example, 9:29299 (R;DE;In German)

MAPEDIT user's manual, 9:30081 (R;US)
The Kieper and MOISTWALL moisture analysis methods for walls, 9:28603 (BA;US)
P Codes
PARDISEKO IV - a computer program for the calculation of the aerosol behaviour in closed vessels, 9:29210 (R;DE;In German)
S Codes
User's guide to Sphere and Plate Interactive Display Routine (SPIDR), 9:29032 (R;US)
User's manual and guide to SALT3 and SALT4: two-dimensional computer codes for analysis of test-scale underground excavations for the disposal of radioactive waste in bedded salt deposits, 9:27925 (R;US)
T Codes
Pellet to cladding interaction modeling with the finite element code TITUS, 9:28274 (R;FR;In French)
TRAC-BD1/MOD1: an advanced best estimate computer program for boiling water reactor transient analysis. Volume 3. Code structure structure and programming information, 9:28444 (R;US)
Z Codes
Calculation of the wall pressure field generated on a group of building by an external explosion (ZEPHIR code), 9:28346 (R;FR)

COMPUTER GRAPHICS
Computer Codes
MAPEDIT user's manual, 9:30081 (R;US)
Equipment Interfaces
Applicon/IBM interface for drawing management and plotting, 9:28985 (R;US)
Installation
Getting into CAD at the Savannah River Plant, 9:30074 (R;US)

COMPUTER NETWORKS
Computer Graphics
Applicon/IBM interface for drawing management and plotting, 9:28985 (R;US)
Security
Fundamentals of computer security, 9:30077 (R;US)

COMPUTER PROGRAMMING
See PROGRAMMING

COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Getting into CAD at the Savannah River Plant, 9:30074 (R;US)
Spline Functions
Recommended practices for spline usage in CAD/CAM systems: CADCAM-007, 9:30083 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Microprocessors
EPICS personal computer evaluation, 9:30076 (R;US)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
See also CAT SCANNING
MENT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28297 (R;US)
Quality Control
Dosimetry and quality control in radiodiagnosis, 9:29382 (R;FR;In French)

COMPUTERS

DEC COMPUTERS
DIGITAL COMPUTERS
HP COMPUTERS
MICROPROCESSORS
Meetings
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:30089 (R;US)

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Comparative Evaluations
Comparison of concentrating collectors to tracking flat panels, 9:28080 (R;US)
Fresnel Lens
Photovoltaic concentrator array reliability, 9:28078 (R;US)
Lenses
Unique material challenges in photovoltaic concentrator modules, 9:28077 (R;US)
Materials
Unique material challenges in photovoltaic concentrator modules, 9:28077 (R;US)
Reliability
Photovoltaic concentrator array reliability, 9:28078 (R;US)

CONCRETES
See also REINFORCED CONCRETE
Compression
Biaxial compression testing of refractory concretes, 9:28853 (BA;US)
Impact Shock
Perforation of a concrete slab by a missile: finite element approach, 9:28826 (R;FR)

CONDENSED AROMATICS
See also ANTHRACENE
BENZOPYRENE
DIMETHYLBENZANTHRACANE
FLUORENE
PYRENE
Chemical Shift
Study of regioselectivity of reaction of donor centres of enamines R_1-C_1O-C_2 = C_3-NHR_3 using NMR, 9:28932 (RA;PL;In Polish)
NMR Spectra
Preliminary studies of the phenomenon of checked rotation in 4-X-substituted-1-/N-alkylo-N-acylo-amino/naphtalenes molecules, 9:28942 (RA;PL;In Polish)
Rotational States
Preliminary studies of the phenomenon of checked rotation in 4-X-substituted-1-/N-alkylo-N-acylo-amino/naphtalenes molecules, 9:28942 (RA;PL;In Polish)

CONDUCTIVITY (THERMAL)
See THERMAL CONDUCTIVITY

CONDUCTORS (ELECTRIC)

CONSOLIDATED FUEL REPROCESSING PROGRAM
Advanced remotely maintainable force-reflecting servomanipulator concept, 9:27907 (R;US)
Advanced teleoperation in nuclear applications: consolidated fuel reprocessing program, 9:27910 (R;US)
Advancement of remote systems technology: past perspectives and future plans, 9:27902 (R;US)
Analysis of the options - rationale for servomanipulator maintenance in future reprocessing plants, 9:27909 (R;US)
Automatic camera tracking for remote manipulators, 9:27903 (R;US)
Control and electronic subsystems for the advanced servomanipulator, 9:27904 (R;US)
Dual arm master controller concept: consolidated fuel reprocessing program, 9:27908 (R;US)

CONSUMER PRODUCTS
Articles of commerce available to the general public. When possible, use descriptors for the specific products.
Consumer Protection
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)

Energy Efficiency Standards
Certification/enforcement: preliminary analysis and recommendations (Consumer products efficiency standards), 9:28574 (R;US)
Certification/enforcement issues: analysis and recommendations (Consumer products efficiency standards), 9:28576 (R;US)
Certification/enforcement: docket analysis. Final report, 9:28577 (R;US)
Certification/enforcement implementation procedures, 9:28575 (R;US)
Summary of certification/enforcement procedures and supporting analysis, 9:28578 (R;US)
Radiation Hazards
Radiation hazards from ear studies and neckwear, 9:29462 (J;CH)

CONTACT RADIOTHERAPY
See RADIOTHERAPY

CONTACTORS
See SWITCHES

CONTAINED EXPLOSIONS
Walls
Barrier breaching device, 9:29165 (P;US)

CONTAINMENT BUILDINGS
Aerosols
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Fires
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Pressure Gradients
Calculation of the wall pressure field generated on a group of building by an external explosion, 9:28346 (R;FR)
Seismic Effects
Design spectra development considering short time histories, 9:28419 (R;US)
Seismic analysis of a PWR 900 reactor: study of reactor building with soil-structure interaction and evaluation of floor spectra, 9:28357 (R;FR)
Stress Analysis
Calculation of the wall pressure field generated on a group of building by an external explosion, 9:28346 (R;FR)

CONTAINMENT SHELLS
Deformation
Calculations methodology of the instabilities for thin shell structures, 9:28349 (R;FR)
Missile Protection
Perforation of a concrete slab by a missile: finite element approach, 9:28826 (R;FR)
Seismic Effects
Calculations methodology of the instabilities for thin shell structures, 9:28349 (R;FR)
Stress Analysis
Calculations methodology of the instabilities for thin shell structures, 9:28349 (R;FR)

CONTAINMENT SYSTEMS
Performance
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)

CONTAMINATION (INTERNAL)

CONTENT ANALYSIS
See CHEMICAL ANALYSIS

CONTINENTAL SHELF
Natural Gas Deposits
Alaska index, December 1981-April 1983, 9:27862 (R;US)
Arctic summary report update, September 1983, 9:27859 (R;US)
Gulf of Mexico index, September 1982-July 1983, 9:27860 (R;US)
Mid-Atlantic summary report, 9:27861 (R;US)
Petroleum Deposits
Alaska index, December 1981-April 1983, 9:27862 (R;US)
Arctic summary report update, September 1983, 9:27859 (R;US)
Gulf of Mexico index, September 1982-July 1983, 9:27860 (R;US)
Mid-Atlantic summary report, 9:27861 (R;US)

CONTRACT ADMINISTRATION
See CONTRACT MANAGEMENT

CONTRACT MANAGEMENT
Prior to March 1983 this concept was indexed to PROGRAM MANAGEMENT.
Administrative Procedures
US Synthetic Fuels Corporation's contracting with individual consultants, 9:28491 (R;US)

CONTRAST MEDIA
Comparative Evaluations
Results of 1,886 choledochal surgeries under particular consideration of intraoperative routine cholangiography with contrast media providing different degrees of density, 9:29385 (R;DE;In German)

CONTROL (INSPECTION)
See INSPECTION

CONTROL ROD EFFECTIVENESS
See CONTROL ROD WORTHS

CONTROL ROD WORTHS
Reactor Safety Experiments
Efficiency of control rods, 9:28363 (RA;DE;In German)

CONTROL ROOMS
Human Factors Engineering
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)

CONTROL SYSTEMS
For automated processes including feedback.
See also COMPUTERIZED CONTROL SYSTEMS
REACTOR CONTROL SYSTEMS
Nova laser alignment control system, 9:30027 (R;US)
Computer Codes
Linear Systems Analysis Program user's manual, Version 2.2 (VAX/VMS), 9:30086 (R;US)
Human Factors Engineering
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)

CONVECTIVE LOOP HOUSES

COPPER
Argon 40 Reactions
Search for anomalon decay by radiochemical methods, 9:29762 (RA;US)
Carbon 12 Reactions
Search for anomalon decay by radiochemical methods, 9:29762 (RA;US)
Charged-Particle Transport
Temperature rise calculations for the beam pipe in the SLC arcs, 9:29102 (R;US)
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Electric Conductivity
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)

Electron Collisions
Measurement of the linear polarization of the photons in the elementary processes of bremsstrahlung production, 9:29562 (R;DE;In German)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Fabrication
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Iron 56 Reactions
Search for short-lived anomalons in projectile fragmentation, 9:29761 (RA;US)
Pion Plus Reactions
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Proton Reactions
Search for anomalon decay by radiochemical methods, 9:29762 (RA;US)
Radioactivation
Users guide to the Li/Cu activation diagnostic, 9:29074 (R;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Trace Amounts
Marine sciences, 9:29290 (RA;US)
Vickers Hardness
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Physical Radiation Effects
Irradiated behavior of high-strength copper alloys, 9:28761 (RA;US)

COPPER BASE ALLOYS
See also BRASS
Influence of sea water pretreatment and flow velocity on the corrosion behaviour of some modified aluminium alloys in North Sea water, 9:28769 (R;DE)
Electric Conductivity
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)
Vickers Hardness
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)
14-MeV neutron radiation-induced microhardness changes in copper alloys, 9:28749 (RA;US)

COPPER COMPOUNDS
Catalytic Effects
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)

COPPER SULFIDE SOLAR CELLS
Heterojunctions
Formation and degradation of Cu/sub 2-x/S/CdS single-crystal heterojunctions: a high-resolution transmission electron microscope study, 9:28074 (R;US)
Performance Testing
Technical use of solar energy. Pt. 1, 9:28066 (R;DE;In German)
Transmission Electron Microscopy
Formation and degradation of Cu/sub 2-x/S/CdS single-crystal heterojunctions: a high-resolution transmission electron microscope study, 9:28074 (R;US)

COPPER VAPOR LASERS
See GAS LASERS

CORDOVA QUAD CITIES-1 REACTOR
See QUAD CITIES-1 REACTOR

CORDOVA QUAD CITIES-2 REACTOR
See QUAD CITIES-2 REACTOR

CORES (REACTOR)
See REACTOR CORES

CORN (MAIZE)
See MAIZE

CORN OIL
Toxicity
Early embryonic lethality induced by seed oils in female mice treated prior to insemination, 9:29482 (RA;US)

CORN STOVER
See AGRICULTURAL WASTES
MAIZE

CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
Fatigue
Temperature dependence of fatigue crack growth rates of A 351 CF8A cast stainless steel in LWR environment, 9:28789 (R;US)

COSMETICS
See CONSUMER PRODUCTS

COSMIC RAY DETECTION
Liquid Ionization Chambers
Liquid ionization chamber using tetramethylsilane, 9:29132 (R;DE;In German)

COSMIC SHOWERS
See also EXTENSIVE AIR SHOWERS
Multiple Production
Normalons, anomalons and anomalies in high energy cosmic rays, 9:29608 (RA;US)

COSMIC X-RAY SOURCES
Oscillations
Coherent oscillations in x-ray burst sources, 9:29539 (RA;IL)
Quasars
X-ray emission and cosmological evolution of quasars, 9:29538 (RA;IL)

COSMOGONY
See COSMOLOGY

COSMOLOGICAL MODELS
Density perturbations in anisotropic universes, 9:29540 (RA;IL)
Metastable vacuum burning phenomenon, 9:29533 (R;XJ)
New exact solutions for inhomogeneous universes, 9:29536 (RA;IL)
Feynman Path Integral
Feynman propagators in singular cosmological models, 9:29537 (RA;IL)
Gauge Invariance
Gravitational gauge fields and the cosmological constant, 9:29675 (J;US)
Grand Unified Theory
Antiproton interaction with ^{4}He as a test of GUT cosmology, 9:29541 (R;XJ)
Gravitational Fields
Gravitational gauge fields and the cosmological constant, 9:29675 (J;US)
Propagator
Feynman propagators in singular cosmological models, 9:29537 (RA;IL)

COSMOLOGY
Scale Dimension
Dimensional reduction in the early universe: Where have the massive particles gone, 9:29544 (J;NL)
Symmetry Breaking
Spontaneously broken global symmetries and cosmology, 9:29542 (J;US)

COSMOS
See UNIVERSE

COST BENEFIT ANALYSIS
Severe accident risk benchmarking and cost-benefit analysis (PWR; BWR), 9:28455 (R;US)

COTTONWOODS
Cloning
Evaluation and genetic improvement of black cottonwood for short-rotation coppice culture. Annual technical report, 9:28071 (R;US)
Hybridization
Evaluation and genetic improvement of black cottonwood for short-rotation coppice culture. Annual technical report, 9:28071 (R;US)

COULOMB SCATTERING
Algorithms
Calculation of two-center Coulomb scattering phases with the use of asymptotic expansions for irregular Coulomb spheroidal c-type functions, 9:29687 (R;XJ;In Russian)
Phase Shift
Calculation of two-center Coulomb scattering phases with the use of asymptotic expansions for irregular Coulomb spheroidal c-type functions, 9:29687 (R;XJ;In Russian)
COUNTERFLOW COOLING TOWERS
See COOLING TOWERS
COUNTERS (RADIATION)

Metabolism
Biokinetics of inhaled ^{244}Cm oxide in the rat: effect of heat treatment at 1150°C, 9:29455 (J;GB)
Tissue Distribution
Biokinetics of inhaled ^{244}Cm oxide in the rat: effect of heat treatment at 1150°C, 9:29455 (J;GB)
CURRENT-DRIVE HEATING
Lower hybrid experiments at the 1 MW level on Alcator C: heating and current drive, 9:29924 (R;US)
Computerized Simulation
Realistic modelling of lower hybrid current drive with multiple codes, 9:29923 (R;US)
Two-Dimensional Calculations
Analytic solution of the 2-D Fokker-Planck equation for LH current drive, 9:29922 (R;US)
CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
See also HYDROCYANIC ACID
Chemical Reactions
Absence of I(^{2}P$_1$/sub //$_2$) as a product of the reactions of F atoms with HI, I_2, and ICN, 9:28920 (J;US)
Quantitative Chemical Analysis
Indirect determination of cyanide by single-column ion chromatography, 9:28896 (J;US)
CYANOBACTERIA
Biological Adaptation
Adaptation of the cyanobacterium Microcystis aeruginosa to light intensity, 9:29402 (J;US)
CYANOGEN
Chemical Reaction Kinetics
Shock tube study of the thermal decomposition of cyanogen, 9:28921 (J;US)
Decomposition
Shock tube study of the thermal decomposition of cyanogen, 9:28921 (J;US)

Desorption
Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)
CYCLIC ACCELERATORS
See also SYNCHROTRONS
Electromagnets
Dual aperture dipole magnet with second harmonic component, 9:29111 (P;US)
CYCLOHEXANE
Photoionization
Solute-induced photo-ionization of nonpolar liquids, 9:28954 (R;US)
CYCLONE SEPARATORS
Design
Flow and design characteristics of the hydrocyclone for the recovery of coal fines. Final report, 9:27822 (R;US)
Performance Testing
Flow and design characteristics of the hydrocyclone for the recovery of coal fines. Final report, 9:27822 (R;US)
CYCLOPHOSPHAMIDE
See ENDOXAN
CYTOCHROMES
DNA-Cloning
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
Genetic Mapping
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
Molecular Structure
X-ray absorption studies of metalloprotein structure: cytochrome P-450, horseradish peroxidase, plastocyanin and laccase, 9:29347 (R;US)
X-Ray Spectroscopy
X-ray absorption studies of metalloprotein structure: cytochrome P-450, horseradish peroxidase, plastocyanin and laccase, 9:29347 (R;US)

D

DAMS
Safety
Safety of existing dams: evaluation and improvement. Final report, 9:28057 (R;US)
DAPHNIA
Nutritional Deficiency
Usefulness of the lipid index for biouptake studies with Daphnia magna, 9:29499 (R;US)
DARK REPAIR
See BIOLOGICAL REPAIR
DARRIEUS ROTORS
Design
Jet spoiler arrangement for wind turbine, 9:28244 (P;US)
Diffusers
Jet spoiler arrangement for wind turbine, 9:28244 (P;US)
DATA ACQUISITION
Microprocessors
User-oriented laboratory data entry computer system designed to reduce errors, 9:30082 (R;US)
DATA ACQUISITION SYSTEMS
Calibration
Instrumentation selection, installation, verification and calibration at the passive cooling experimental facility for a hot/arid climate, 9:28159 (R;US)
Design
The design of the data acquisition system for a very large bismuth germanate calorimeter, 9:29141 (J;US)
Meetings
Review of the 3rd biennial conference on real-time computer applications in nuclear and particle physics, 9:30089 (R;US)
Specifications
Instrumentation selection, installation, verification and calibration at the passive cooling experimental facility for a hot/arid climate, 9:28159 (R;US)
DATA BASE MANAGEMENT
Documentation
System information database: an automated maintenance aid, 9:30078 (R;US)
DATA PROCESSORS
See DIGITAL COMPUTERS
DATA TRANSMISSION
Optical Fibers
Direct transmission of images through optical fibers, 9:29046 (RA;IL)
DAUGHTER PRODUCTS

DEUTERIUM
Desorption
Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)
Fuel Cycle
Tritium catalyzed deuterium (TCD) tokamaks, 9:30041 (J;US)

DEUTERIUM COMPOUNDS
NMR Spectra
Influence of H_0 field on NMR spectra of tunnelling ND_4^+ ion, 9:28909 (RA;PL;In Polish)

DEUTERIUM TARGET
Alpha Reactions
Upper limit on the isovector parity-violating decay width of the 0^+ T = 1 state of ^{8}Li, 9:29712 (J;US)
Deuteron Reactions
Limits on anomalon production in deuterium-deuterium collisions at 7.9 GeV/c, 9:29710 (RA;US)
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Electron Reactions
Electron scattering and few nucleon systems, 9:29699 (R;FR)
Exclusive electrodisintegration of ^{3}H far away off the quasielastic region, 9:29697 (R;FR)
Study on the nucleon-nucleon potential characteristics on the base of a d(e,esup(')pn reaction, 9:29702 (RA;SU;In Russian)
Four-Body Problem
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Lepton Reactions
Nuclear effects in deep inelastic scattering, 9:29807 (RA;DE)
Neutrino Reactions
Total cross section of neutrino (antineutrino) radiative scattering on deuteron with account for neutrino spectra, 9:29704 (RA;SU;In Russian)
Proton Reactions
Coulomb interaction effect on the exchange amplitude singularities and the $d \rightarrow p + n$ nuclear vertex constant from the analysis of the p + d elastic backscattering, 9:29707 (RA;SU;In Russian)

DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES

DEUTERON REACTIONS
Coupled Channel Theory
One-center Coulomb adiabatic basis for the coupled channel method, 9:29770 (RA;SU;In Russian)
Direct Reactions
Limits on anomalon production in deuterium-deuterium collisions at 7.9 GeV/c, 9:29710 (RA;US)
Elastic Scattering
Contribution of virtual excitations in diffraction scattering of protons and deuterons on ^{6}Li nucleus, 9:29720 (RA;SU;In Russian)
Modification of boundary conditions in an optical scattering model, 9:29752 (RA;SU;In Russian)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Decay
Coulomb interaction effect on the exchange amplitude singularities and the $d \rightarrow p + n$ nuclear vertex constant from the analysis of the p + d elastic backscattering, 9:29707 (RA;SU;In Russian)
Quark Model
"Six-quark" component in the deuteron from a comparison of electron and neutrino/antineutrino structure functions, 9:29634 (J;US)
Scattering Amplitudes
Coulomb interaction effect on the exchange amplitude singularities and the $d \rightarrow p + n$ nuclear vertex constant from the analysis of the p + d elastic backscattering, 9:29707 (RA;SU;In Russian)

DIESEL ENGINES
Electric Generators
100 area diesel performance data, 9:28701 (R;US)
Ethanol Fuels
Results from ethanol fumigation of an I.D.I. and a D.I. diesel engine, 9:28722 (BA;NZ)
Exhaust Gases
Problem definition study on emission by-product hazards from diesel engines for confined space army workplaces. Final report, 9:29469 (R;US)
Fuel Injection Systems
Results from ethanol fumigation of an I.D.I. and a D.I. diesel engine, 9:28722 (BA;NZ)
Fuel Substitution
A modern alternative to oil-fired ships, 9:28709 (J;US)
Evaluation of stabilized alcohol/petroleum fuels in a direct injection diesel engine, 9:28723 (BA;NZ)
DIESEL FUELS
Biological Effects
Barley growth in coal liquid and diesel liquid fuels from coal and oil: a comparison of potential toxic effects on barley, 9:29501 (J;NL)
Combustion Properties
Evaluation of stabilized alcohol/petroleum fuels in a direct injection diesel engine, 9:28723 (BA;NZ)
Fuel Additives
Evaluation of stabilized alcohol/petroleum fuels in a direct injection diesel engine, 9:28723 (BA;NZ)
Inhalation
Inhalation toxicology, 9:29492 (RA;US)
Microemulsions
Microemulsions as diesel fuels, 9:28699 (R;US)
Toxicity
Inhalation toxicology, 9:29492 (RA;US)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIGITAL COMPUTERS
Meetings
CERN school of computing 1982. Proceedings, 9:30072 (R;CH)
Parallel Processing
Thinking big, 9:30090 (R;US)
Performance
Thinking big, 9:30090 (R;US)
Vector Processing
Thinking big, 9:30090 (R;US)
1,2-DIHYDROXYBENZENE
See PYROCATECHOL
DIHYDROXYBENZENE-ORTHO
See PYROCATECHOL
DIMETHYL KETONE
See ACETONE
DIMETHYL SULFOXIDE
See DMSO
DIMETHYLBENZANTHRACENE
Biological Effects
Effects of androgens and antiandrogens on the induction of mouse skin papillomas by phorbol ester tumor promoters, 9:29494 (RA;US)
Toxicity
Induction and progression of neoplasia in tracheal epithelium, 9:29491 (RA;US)
DIODES (SEMICONDUCTOR)
See SEMICONDUCTOR DIODES
DIOLS
See GLYCOLS
DIPHENYLPHOSPHINE OXIDE
See ORGANIC PHOSPHORUS COMPOUNDS
DIRAC EQUATION
Eikonal Approximation
Approximate Dirac scattering amplitudes: Eikonal expansion, 9:29858 (J;US)
DIRAC MONOPOLES
See MAGNETIC MONOPOLES
DIRECT REACTIONS
Thermal Equilibrium
Approach to chemical equilibrium in thermal models, 9:29859 (J;US)
DISASTERS
See also FLOODS
Simulation
Nuclear weapon accident exercise 1983 (NUWAX-83) after action report. Volume 1, 9:29170 (R;US)
DISCHARGES (ELECTRIC)
See ELECTRIC DISCHARGES
DISCHARGES (WASTES)
See WASTE DISPOSAL
DISINTEGRATION (FISSION)
See FISSION
DISMANTLING (REACTOR)
See REACTOR DISMANTLING
DISPERSANTS (CHEMICAL)
See SURFACTANTS
DISPERSED STORAGE AND GENERATION
Small power production interconnection issues and costs. Final report, 9:28546 (R;US)
Cost Benefit Analysis
Protection and safety of electric distribution systems with dispersed storage and generation devices, 9:28258 (R;US)
Equipment Protection Devices
Protection and safety of electric distribution systems with dispersed storage and generation devices, 9:28258 (R;US)
DISPOSAL (WASTES)
See WASTE DISPOSAL
DISPOSAL WELLS
Environmental Effects
Geopressured brine disposal. Final report, Nov 81-Sep 83, 9:27864 (R;US)
DISSOLVED OXYGEN
See OXYGEN
DISTILLATE FUEL
See HEATING OILS
DISTILLATE FUEL OIL
See HEATING OILS
DISTILLATES
See also PETROLEUM DISTILLATES
Sampling
Development of sampling frame of distillate and residual fuel oil dealers and sample selection. Final project status briefing , 9:27857 (R;US)
DISTILLATION
Computers
Process energy conservation manual, 9:28688 (B;US)
Experimental Data
Round-robin study of distillation procedures, 9:27735 (RA;US)
Interlaboratory Comparisons
Round-robin study of distillation procedures, 9:27735 (RA;US)
DISTRIBUTED COLLECTOR POWER PLANTS
Maintenance
Plant operation report and daily operation summary. Monthly data, 9:28106 (R;US)
Plant operation report and daily operation summary. Monthly data, 9:28105 (R;US)
Operation
Plant operation report and daily operation summary. Monthly data, 9:28106 (R;US)
Plant operation report and daily operation summary. Monthly data, 9:28105 (R;US)
Optimization
1984 Program of work: test and evaluation of CRS and DCS plants, 9:28104 (R;US)

DISTRICT HEATING
Environmental Impacts
Environmental aspects of district heating/cogeneration in the twin cities, 9:28695 (R;US)
Feasibility Studies
Moorhead District Heating Project, City of Moorhead, Minnesota. Report on reference design, 9:28694 (R;US)
Heat Distribution Systems
Investigations specific to qualifications for the further development of district-heating pipes, 9:28533 (R;DE;In German)
DMBA
See DIMETHYLBENZANTHRACENE
DMSO
Biological Effects
Problem definition study of dimethyl sulfoxide (DMSO) and interactive health effects with other chemicals. Final report, 9:29495 (R;US)
Chemical Radiation Effects
Novel radical anions and hydrogen atom tunneling in the solid state, 9:28965 (J;US)
Solvent Properties
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
DNA
Binding Energy
Chromomycin A_3 as a fluorescent probe for flow cytometry of human gynecologic samples, 9:29368 (J;US)
Biochemical Reaction Kinetics
Effect of alkali on the size dispersity of mammalian DNA measured by filter elution, 9:29459 (J;US)
Biological Repair
DNA repair in human cells, 9:29343 (RA;US)
Genetic analysis of DNA repair in man with cell hybrids, 9:29344 (RA;US)
Genetic dissection of DNA repair in xeroderma pigmentosum cells, 9:29369 (RA;US)
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
Biosynthesis
Flow cytometric analysis of bromodeoxyuridine-substituted cells stained with 33258 Hoechst, 9:29363 (J;US)
Chemical Analysis
Similarity of satellite DNA properties in the order Rodentia, 9:29361 (J;GB)
Dyes
Strategies for choosing a deoxyribonucleic acid stain for flow cytometry of metaphase chromosomes, 9:29365 (J;US)
Fluorescence
Flow cytometric analysis of bromodeoxyuridine-substituted cells stained with 33258 Hoechst, 9:29363 (J;US)
Helical Configuration
Circular DNA unwound by photoproducts other than pyrimidine dimers, 9:29460 (J;US)
Mobility
Circular DNA unwound by photoproducts other than pyrimidine dimers, 9:29460 (J;US)
Molecular Structure
Effect of alkali on the size dispersity of mammalian DNA measured by filter elution, 9:29459 (J;US)
Structural aspects of DNA in its replication and repair, 9:29330 (RA;US)
Strand Breaks
Site specific cleavage of θX-174 replicative form DNA after modification by N-acetoxy-N-2-acetylaminofluorene, 9:29509 (J;US)
Ultracentrifugation
Chromosomes of antelope squirrels (genus Ammospermophilus): a systematic banding analysis of four species with unusual constitutive heterochromatin, 9:29366 (J;DE)
Similarity of satellite DNA properties in the order Rodentia, 9:29361 (J;GB)
Stable, near-haploid mammalian cell line (Dipodomys ordii), 9:29364 (J;US)
DNA ADDUCTS
Absorption Spectroscopy
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Biological Repair
Mechanisms of mutagenesis and DNA repair, 9:29442 (RA;US)
Use of MNU-ENU double exposure in the spot test to explore the in vivo action of an O^6 alkyl tranaferase, 9:29474 (RA;US)
DNA Repair
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Fluorescence Spectroscopy
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Liquid Column Chromatography
DNA dosimetry applied to problems in genetic toxicology, 9:29338 (RA;US)
Molecular Structure
DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice, 9:29481 (RA;US)
Nuclear Magnetic Resonance
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Quantitative Chemical Analysis
Chemical dosimetry studies in mammalian germ cells, 9:29486 (RA;US)
DNA POLYMERASES
Biochemical Reaction Kinetics
Modification of structures and functions of proteins involved in phage T5 DNA replication, 9:29332 (RA;US)
Biosynthesis
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
Inhibition
DNA repair in human cells, 9:29343 (RA;US)
Liquid Column Chromatography
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
Molecular Structure
Modification of structures and functions of proteins involved in phage T5 DNA replication, 9:29332 (RA;US)
DNA REPAIR
Biochemistry
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Mathematical Models
Response of sensitive human ataxia and resistant T-1 cell lines to accelerated heavy ions, 9:29435 (R;US)
DOMESTIC ANIMALS
Contamination
Animal investigation program for the Nevada Test Site: 1957-1981, 9:29271 (R;US)
DOPAMINE
Oxidation
Mechanism of the oxidation of dopamine by the hydroxyl radical in aqueous solution, 9:28964 (J;US)
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSE-RESPONSE RELATIONSHIPS
Risk evaluation - conventional and low level effects of radiation, 9:29430 (R;US)
DOSIMETRY
See also NEUTRON DOSIMETRY
PERSONNEL DOSIMETRY
Ionization Chambers
Spectrum-averaged kerma factors for reactor dosimetry with paired ion chambers. Technical report, 9:29116 (R;US)
DOUBLE ENVELOPE BUILDINGS
Computer-Aided Design
Thermal modeling and design of a dual-envelope office building, 9:28652 (BA;US)

Computerized Simulation
Thermal modeling and design of a dual-envelope office building, 9:28652 (BA;US)
Energy Consumption
Effect of relative placement of thermal mass and insulation on building energy use, 9:28625 (BA;US)
Energy Management
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
Humidity Control
Evaluation of current guidelines of good practice for condensation control in insulated building envelopes, 9:28602 (BA;US)
Space HVAC Systems
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
Temperature Control
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
Thermal Efficiency
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
Effect of relative placement of thermal mass and insulation on building energy use, 9:28625 (BA;US)
Thermal and moisture behavior of an envelope test building, 9:28634 (BA;US)
Thermal Testing
Thermal and moisture behavior of an envelope test building, 9:28634 (BA;US)

DOUBLE SHELL HOUSES
See DOUBLE ENVELOPE BUILDINGS

DOUBLE WALL HOUSES
See DOUBLE ENVELOPE BUILDINGS

DOUBLET 3 DEVICES
See DOUBLET REACTORS

DOUBLET REACTORS
ECR Heating
Electron cyclotron heating experiments on Doublet III, 9:29929 (R;US)

DOW PUSHER 700
See POLYAMIDES

DPO
See ORGANIC PHOSPHORUS COMPOUNDS

DRIFT CHAMBERS
Data Processing
Silicon drift chambers: first results and optimum processing of signals, 9:29118 (R;US)
Design
Diogene pictorial drift chamber, 9:29119 (R;FR)
Performance
Diogene pictorial drift chamber, 9:29119 (R;FR)
Performance Testing
Silicon drift chambers: first results and optimum processing of signals, 9:29118 (R;US)

DRIFT INSTABILITY
Boltzmann-Vlasov Equation
Pedersen density drift instabilities, 9:29550 (J;US)

DRIFT TUBES
Electron Beams
Intense relativistic electron beam propagation in evacuated drift tubes, 9:29572 (J;US)

DRILL PIPES
Corrosion Fatigue
Fatigue studies of drill pipe immersed in drilling mud with H_2S and CO_2. Final report, October 1, 1980-July 31, 1983, 9:27847 (R;US)
Hydrogen Embrittlement
Fatigue studies of drill pipe immersed in drilling mud with H_2S and CO_2. Final report, October 1, 1980-July 31, 1983, 9:27847 (R;US)

DRILL SHIPS
See OFFSHORE PLATFORMS
SHIPS

DRILLING FLUIDS
Limited to materials used in well drilling.
Chemical Composition
Fatigue studies of drill pipe immersed in drilling mud with H_2S and CO_2. Final report, October 1, 1980-July 31, 1983, 9:27847 (R;US)
PH Value
Fatigue studies of drill pipe immersed in drilling mud with H_2S and CO_2. Final report, October 1, 1980-July 31, 1983, 9:27847 (R;US)

DRILLING MUD
See DRILLING FLUIDS

DRILLING PLATFORMS
See OFFSHORE PLATFORMS

DRINKING WATER
Enhanced recovery of coliforms by anaerobic incubation, 9:28696 (R;US)

DROSOPHILA
Genetics
Mechanism of genetic suppression, 9:29377 (RA;US)

DRY STORAGE
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)

DRYOUT
Heat Transfer
Investigations of post-dryout heat transfer in case of vertical and horizontal pipe flow, 9:29014 (R;DE;In German)
Two-Phase Flow
Investigations of post-dryout heat transfer in case of vertical and horizontal pipe flow, 9:29014 (R;DE;In German)

DRY-TYPE COOLING TOWERS
See COOLING TOWERS

DTO
See DEUTERIUM COMPOUNDS
TRITIUM COMPOUNDS

DUALITY
Generalized vector products, duality, and octonionic identities in D = 8 geometry, 9:29918 (J;US)

DUCTS
Leaks
Parameters affecting air infiltration and air tightness in thirty-one east Tennessee homes, 9:28571 (R;US)

DUMAND PROJECT
Deep Underwater Muon and Neutrino Detection Project.
Research Programs
Annual progress report of the High Energy Physics Group, 9:29591 (R;US)
High Energy Physics Group. Annual progress report, fiscal year 1983, 9:29590 (R;US)

DUSTS
Control
Longwall mining dust control. Technical progress report No. 26, September 1-30, 1983, 9:27812 (R;US)

DYE LASERS
Feedback
Distributed feedback dye laser in conjunction with a Haensch type dye laser, 9:29003 (RA;IL)
Optimization
Solvent effects in oscillator/amplifier configured dye lasers, 9:29008 (J;US)
Quenching
Light-induced quenching of the spontaneous and stimulated emission of dye solutions, 9:29009 (TJ;US)

DYES
Biological Effects
Interaction of Hoechst 33258 and BrdU substituted DNA in the formation of sister chromatid exchanges, 9:29367 (J;DE)
Comparative Evaluations
Strategies for choosing a deoxyribonucleic acid stain for flow cytometry of metaphase chromosomes, 9:29365 (J;US)
Fluorescence Spectroscopy
Strategies for choosing a deoxyribonucleic acid stain for flow cytometry of metaphase chromosomes, 9:29365 (J;US)
Synergism
Interaction of Hoechst 33258 and BrdU substituted DNA in the formation of sister chromatid exchanges, 9:29367 (J;DE)

DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM

DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMICS (BEAM)
See BEAM DYNAMICS
DYSPROSIUM 150
Alpha Decay
Studies on the electron capture decay of ^{148}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies, 9:29764 (R;DE;In German)
Electron Capture Decay
Studies on the electron capture decay of ^{148}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies, 9:29764 (R;DE;In German)
DYSPROSIUM 158
Rotational States
Study on the rotational bands in the model of phase random approximation plus self-consistent cranking model, 9:29816 (RA;SU;In Russian)

E

EARTH ATMOSPHERE
See also IONOSPHERE
MAGNETOSPHERE
TROPOSPHERE
Turbulence
Parametrization of turbulent diffusion in the atmosphere using turbulent energy equation(s), 9:29209 (R;DE;In German)
Wave Propagation
Dynamic characteristic of intense short microwave propagation in an atmosphere, 9:29549 (R;US)
EARTH PLANET
Wind
Worldwide energy resource distribution estimates, 9:28237 (R;US)
EARTH-COVERED BUILDINGS
Cost Benefit Analysis
Thermal envelope field measurements in an energy-efficient office/dormitory, 9:28647 (BA;US)
Thermal Efficiency
Thermal envelope field measurements in an energy-efficient office/dormitory, 9:28647 (BA;US)
EARTHQUAKES
See also MICROEARTHQUAKES
Hazards
Historical method of seismic hazard analysis. Interim report, May 1984, 9:28381 (R;US)
EARTHWORMS
See ANNELIDS
ECOLOGY
Pacific Northwest Laboratory annual report for 1983 to the DOE Office of Energy Research. Part 2. Ecological sciences, 9:29274 (R;US)
ECONOMIC POLICY
Forecasting
Scoreboard on energy predictions, 9:28537 (J;US)
Information Validation
Scoreboard on energy predictions, 9:28537 (J;US)
ECR HEATING
Energy Transfer
Calculation of the energy deposition of electron cyclotron waves in a stellarator plasma, 9:29945 (R;DE)
Microwave Equipment
Proposed 60 GHz transmission line system for ECRH on W VII-AS, 9:30001 (R;DE)
Performance
Electron cyclotron heating experiments on Doublet III, 9:29929 (R;US)
EDS LIQUEFACTION
See EXXON LIQUEFACTION PROCESS
EDTA
Teratogenesis
Analysis of teratogens and potential teratogens using FETAX (frog embryo teratogenesis assay: Xenopus), 9:29471 (RA;US)
EDUCATION
Bibliography: jobs, employment and training in energy, 9:28559 (R;US)

ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
See also LEAD-ACID BATTERIES
THERMAL BATTERIES
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
Battery Separators
Membranes and separators for flowing electrolyte batteries-a review, 9:28487 (J;US)
Comparative Evaluations
Electric vehicle battery system testing at TVA, 9:28714 (R;US)
Electrolytes
Membranes and separators for flowing electrolyte batteries-a review, 9:28487 (J;US)
Membranes
Membranes and separators for flowing electrolyte batteries-a review, 9:28487 (J;US)
Performance Testing
Enhanced low-temperature performance of a multicell Li/$SOCl_2$ battery, 9:28483 (R;US)
Reviews
Secondary alkaline batteries, 9:28479 (R;US)
Technology Assessment
Emerging battery technologies, 9:28484 (R;US)
Testing
Electric vehicle battery system testing at TVA, 9:28714 (R;US)
ELECTRIC CABLES
See also SUPERCONDUCTING CABLES
Chemical Radiation Effects
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
Physical Radiation Effects
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
ELECTRIC CHARGES
Measuring Instruments
Real-time measurements and control of particle charge as applied to electrostatically enhanced fabric filters. Technical progress report, 9:29156 (R;US)

ELECTRIC CONDUCTORS
Charged-Particle Transport
Effects of static disorder on the transport properties of a metallic system, 9:28778 (RA;IL)
ELECTRIC CONTACTORS
See SWITCHES
ELECTRIC DISCHARGE PUMPING
See ELECTRICAL PUMPING
ELECTRIC DISCHARGES
Plasma Diagnostics
Diagnostics of a high current capillary discharge, 9:29954 (R;US)
ELECTRIC GENERATORS
Rotating generators only; excludes DIRECT ENERGY CONVERTERS.
Mathematical Models
Mathematical model for the doubly-fed wound rotor generator. Part II, 9:28240 (R;US)
ELECTRIC LOGGING
Mathematical Models
Evaluation of geophysical surface methods for measuring hydrological variables in fractured rock units. Open file report, 9 Jul 81-23 Aug 83, 9:27811 (R;US)
ELECTRIC MONOPOLES
See ELECTRIC CHARGES
ELECTRIC MOTORS
Energy Efficiency
Power factor controller laboratory performance test report, 9:28686 (R;US)
Performance Testing
Power factor controller laboratory performance test report, 9:28686 (R;US)
ELECTRIC POWER
See also HYDROELECTRIC POWER
Energy Consumption
Connecticut energy data, 9:28557 (R;US)
Fluidized-Bed Combustion
Hot gas cleanup using ceramic cross flow membrane filters. Final report, 9:28254 (R;US)
Hot Gas Cleanup
Hot gas cleanup using ceramic cross flow membrane filters. Final report, 9:28254 (R;US)
Planning
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
Rate Structure
Interdisciplinary approach to cost/benefit analysis of innovative electric rates, 9:28505 (J;NL)
Resource Assessment
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
Supply and Demand
Modeling of commercial buildings for optimal regional energy conservation, 9:28655 (BA;US)
State energy data report. Consumption estimates, 1960-1982, 9:27855 (R;US)
Taxes
Compensatory charge as guarantee of power supply (Federal Republic of Germany), 9:28555 (R;DE;In German)
ELECTRIC POWER SYSTEMS
See POWER SYSTEMS
ELECTRIC SWITCHES
See SWITCHES
ELECTRIC UTILITIES
Cogeneration
Energy, capacity and economic effects of cogeneration interfaced with electric utility systems, 9:28690 (J;US)
Cost Benefit Analysis
Electric Power Quarterly, October-December 1983, 9:28545 (R;US)
Load Management
The computerized commercial building energy and load management simulation analysis/audit system, 9:28656 (BA;US)
Planning
Electric Generation Expansion Analysis System. Volume 6. Installation manual. Final report, 9:28550 (R;US)
Pricing Regulations
Interdisciplinary approach to cost/benefit analysis of innovative electric rates, 9:28505 (J;NL)
ELECTRICAL INSULATION
Gases
Particle contamination in gas-insulated systems: new control methods and optimum SF_6/N_2 mixtures, 9:28828 (R;US)
ELECTRICAL PUMPING
High-Frequency Discharges
Microwave discharge in a supersonic flow for the excitation of a gasdynamic CO-laser, 9:29000 (R;DE;In German)
ELECTRIC-POWERED VEHICLES
See also HYBRID ELECTRIC-POWERED VEHICLES
Battery Chargers
Test and evaluation of the Philips Model PE 1701 and Lester Model 9865 electric vehicle battery chargers, 9:28716 (R;US)
Electric Batteries
Electric vehicle battery system testing at TVA, 9:28714 (R;US)
Feasibility Studies
Electric and hybrid vehicle demonstration project. Final report, 9:28713 (R;US)
Operation
Electric vehicle operations in a cold climate, 9:28711 (R;US)
Operation of electric vehicles in the US Department of Energy Test Program, 9:28712 (R;US)
Performance Testing
Test and evaluation report for the USPS Comuta Van, 9:28715 (R;US)
ELECTROCHEMISTRY
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
ELECTROLYSIS
Research Programs
Quality engineering and control. Annual progress report, January-December 1981, 9:28882 (R;US)
ELECTROLYTIC CELLS
Cost
Water vapor electrolysis: systems considerations and cost/performance benefits, 9:28009 (R;US)
Performance
Water vapor electrolysis: systems considerations and cost/performance benefits, 9:28009 (R;US)
Photovoltaic Power Supplies
Activities at the Brookhaven National Laboratory integrated test bed for advanced hydrogen technology, 9:28010 (R;US)
ELECTROMAGNETIC SURVEYS
Controlled source electromagnetic methods in geothermal exploration, 9:28208 (R;US)
ELECTROMAGNETS
See also BEAM FOCUSING MAGNETS
SUPERCONDUCTING MAGNETS
Design
Dual aperture dipole magnet with second harmonic component, 9:29111 (P;US)
Magnetic Dipoles
Dual aperture dipole magnet with second harmonic component, 9:29111 (P;US)
ELECTRON ACCEPTOR
See ELECTRONS
ELECTRON BEAMS
Beam Optics
Intense relativistic electron beam propagation in evacuated drift tubes, 9:29572 (J;US)
Beam Transport
APC-II: an electron beam propagation code, 9:30023 (R;US)
Electron motion in solenoidal magnetic fields using a first order symplectic integration algorithm, 9:29072 (R;US)
Electron Drift
Drift velocity measurements in relativistic electron beams, 9:29565 (RA;IL)
Energy Losses
Temperature rise calculations for the beam pipe in the SLC arcs, 9:29102 (R;US)
ELECTRON COLLISIONS
See also ELECTRON-ION COLLISIONS

Bremsstrahlung
Measurement of the linear polarization of the photons in the elementary processes of bremsstrahlung production, 9:29562 (R;DE;In German)
ELECTRON CYCLOTRON MASERS
See MICROWAVE AMPLIFIERS

ELECTRON PAIRS
Bremsstrahlung
Integral characteristics of polarized bremsstrahlung with account for recoil effects and nuclear structure, 9:29818 (RA;SU;In Russian)
Kondo Effect
Re-entrant superconductivity, 9:29886 (BA;US)
Magnetoresistance
Re-entrant superconductivity, 9:29886 (BA;US)
Photoproduction
Integral characteristics of polarized bremsstrahlung with account for recoil effects and nuclear structure, 9:29818 (RA;SU;In Russian)
Space-odd spin effects in e^+e^- pair photoproduction with account for nucleus excitation, 9:29602 (RA;SU;In Russian)
Superconductivity
Re-entrant superconductivity, 9:29886 (BA;US)
ELECTRON REACTIONS
Breakup Reactions
Electron scattering and few nucleon systems, 9:29699 (R;FR)
Exclusive electrodisintegration of ^{3}H far away off the quasielastic region, 9:29697 (R;FR)
Study on the nucleon-nucleon potential characteristics on the base of a d(e,esup(')))pn reaction, 9:29702 (RA;SU;In Russian)
Deep Inelastic Scattering
Lepton scattering from nuclear targets, 9:29778 (RA;US)
Inelastic Scattering
Low multipolarity magnetic transitions in ^{32}S excited by electron scattering, 9:29744 (J;US)
Nuclear Structure
Electron scattering and nuclear structure, 9:29805 (R;FR)
Scattering
Electron scattering and few nucleon systems, 9:29699 (R;FR)
ELECTRON SOURCES
Specifications
Making electron beams for the SLC linac, 9:29108 (R;US)
ELECTRON TEMPERATURE
Fluctuations
Experimentally observed effects of transient fluctuational electron transitions and phase and polymorphic transformations in small volumes of solids, 9:29880 (RA;IL)
ELECTRON-DEUTERON INTERACTIONS
Deep Inelastic Scattering
"Six-quark" component in the deuteron from a comparison of electron and neutrino/antineutrino structure functions, 9:29634 (J;US)
ELECTRONIC CIRCUITS
See also PRINTED CIRCUITS
SWITCHING CIRCUITS
Thin Films
Thin film technology of high-critical-temperature superconducting electronics. Annual report 1 Aug 82-30 Oct 83, 9:28977 (R;US)
ELECTRONIC EQUIPMENT
See also POWER SUPPLIES
Shielding
Multi-element x-ray shields for spacecraft. Final report 1981-1983, 9:29867 (R;US)
ELECTRON-ION COLLISIONS
Meetings
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
Research Programs
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
ELECTRON-POSITRON INTERACTIONS
Annihilation
Electroweak radiative corrections to the $^+e^-e \rightarrow {}^+\mu^-\mu$ asymmetry, 9:29625 (R;DE)
Hadronic remnants in W and Z production, 9:29639 (J;US)
Investigation of tau pair production at PETRA, 9:29605 (R;DE)
Prompt electron production in e^+e^- annihilation at 29 GeV p, 9:29644 (J;US)
Recent results on prompt electron production at PEP, 9:29610 (R;US)
Test of quantum electrodynamics using the reaction $e^+e \rightarrow \gamma\gamma$ at $\sqrt{s}$ = 29 GeV, 9:29588 (R;US)
Composite Models
Composite models and finite-width effects on $e^+e^- \rightarrow \mu^+\mu^-$ asymmetry, 9:29635 (J;US)
Final-State Interactions
Task A. Study of large P/sub T/ direct photon production at the ISR. Task B. Direct photon production at the tevatron (E-706). Task C. Search for fractional charge particles in semiconductors. Progress report, June 1, 1983-May 31, 1984, 9:29589 (R;US)
Pair Production
Electroweak radiative corrections to the $^+e^-e \rightarrow {}^+\mu^-\mu$ asymmetry, 9:29625 (R;DE)
Investigation of tau pair production at PETRA, 9:29605 (R;DE)
Particle Production
Hadronic remnants in W and Z production, 9:29639 (J;US)
Production of nonstandard Higgs bosons in e^+e^- collisions p, 9:29638 (J;US)
Prompt electron production in e^+e^- annihilation at 29 GeV p, 9:29644 (J;US)
Recent results on prompt electron production at PEP, 9:29610 (R;US)
Search for highly ionizing particles in e^+e^- collisions at $\sqrt{s}$ = 29 GeV, 9:29614 (J;US)
Prompt Electrons
Recent results on prompt electron production at PEP, 9:29610 (R;US)
ELECTRON-PROTON INTERACTIONS
Colliding Beams
Lepton-nucleon collisions, 9:29626 (RA;DE)
Virtues of HERA, 9:29586 (RA;DE)
Deep Inelastic Scattering
"Six-quark" component in the deuteron from a comparison of electron and neutrino/antineutrino structure functions, 9:29634 (J;US)
Meetings
Experimentation at HERA, 9:29585 (R;DE)
ELECTRONS
See also PROMPT ELECTRONS
Bremsstrahlung
Bremsstrahlung of relativistic electrons in a quantum system de-excitation, 9:29871 (RA;SU;In Russian)
Energy Spectra
Application of track calculations to radiobiology. 2. Calculations of microdosimetric quantities, 9:29878 (J;US)
Microdosimetry
Application of track calculations to radiobiology. 2. Calculations of microdosimetric quantities, 9:29878 (J;US)
Transmission
Electron transmission in one dimensional multilayer material, 9:29869 (R;FR)
Tunneling
Electromagnetic squeezer for compressing squeezable electron tunneling junctions. Technical report, 9:29040 (R;US)
ELECTROSTATIC PRECIPITATORS
Sensitivity
Electrostatic precipitator for the study of airborne radioactivity, 9:29138 (J;GB)
ELECTROSTATIC WAVES
See PLASMA WAVES
ELEMENTARY PARTICLES
See also HADRONS
LEPTONS
POSTULATED PARTICLES

Research Programs
1982. Annual progress report, 9:29582 (R;FR;In French)
Van der Waals Forces
Van der Waals-like forces in spontaneously broken supersymmetries, 9:29660 (R;IT)
EMANOMETERS
Calibration
Passive, integrated measurement of indoor radon using activated carbon, 9:29139 (J;GB)
EMBRYOS
Cryobiology
Establishment of an embryo-freezing program for the preservation of genetic stocks, 9:29404 (RA;US)
Viability
Analysis of spontaneous early embryonic lethality in mice, 9:29403 (RA;US)
EMISSION
Regulations
Economics of industrial steam options for the 1980's, 9:28250 (R;US)
EMISSION SPECTROSCOPY
Equipment
Inductively coupled argon plasma torch for trace element analysis of heavy metals in suspended particles and sediments, 9:28861 (R;DE;In German)
EMPLOYEES
See PERSONNEL
EMPLOYMENT
Bibliography: jobs, employment and training in energy, 9:28559 (R;US)
END USE SECTOR

ENDOXAN
Biological Effects
Variability in DNA distributions of human neuroblastomas after cyclophosphamide, 9:29360 (J;US)
Teratogenesis
Analysis of teratogens and potential teratogens using FETAX (frog embryo teratogenesis assay: Xenopus), 9:29471 (RA;US)
Toxicity
Variability in DNA distributions of human neuroblastomas after cyclophosphamide, 9:29360 (J;US)
ENERGY
See also NUCLEAR ENERGY
SOLAR ENERGY
Information Dissemination
EIA publications. New releases, 9:28488 (R;US)
Research Programs
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Long-term plan is needed to guide DOE and multiprogram laboratory research and development activities, 9:28516 (R;US)
Socio-Economic Factors
Bibliography: jobs, employment and training in energy, 9:28559 (R;US)
ENERGY ABSORPTION
Monte Carlo Method
Application of track calculations to radiobiology. 2. Calculations of microdosimetric quantities, 9:29878 (J;US)
ENERGY AUDITS
Calculation Methods
A simplified method for calculating heating and cooling energy in residential buildings, 9:28599 (BA;IE)
ENERGY CONSERVATION
Economics
The cost of conserved energy as an investment statistic, 9:28596 (J;CH)
Energy Policy
Consumer energy conservation policies in Sweden, 9:28535 (R;DE)
Financing
Analysis of shared savings vs. direct financing of energy retrofits in federal buildings. Final report, 9:28572 (R;US)
Government Policies
Consumer energy conservation policies in Australia, 9:28534 (R;DE)
Grants
Engineering, analytical, and program management assistance to the US Department of Energy Boston Support Office. Final report, 9:28581 (R;US)
Information Needs
Review of studies of research opportunities in energy conservation, 9:28684 (R;US)
Materials
Materials aspects of solar energy use in buildings, 9:28163 (R;US)
Recommendations
Impact of building envelopes on energy consumption and energy design guidelines, 9:28615 (BA;US)
Training
Shandiin Institute inter-tribal solar training program, 9:28063 (R;US)
ENERGY CONSUMPTION
Consumption Rates
State energy data report supplement: consumption estimates, 1960-1982, 9:28556 (R;US)
Global Aspects
Monthly energy review, February 1984, 9:27853 (R;US)
Sectoral Analysis
Connecticut energy data, 9:28557 (R;US)
Simulation
Users guide to simulation with 9DGEM on the EIA/EDS computer. Volume IV. Final report, 9:28496 (R;US)
ENERGY DEMAND
Energy Models
Nonutility demand for coal. Volume 1. Industrial coal demand. Final report, 9:28542 (R;US)
Forecasting
Nonutility demand for coal. Volume 1. Industrial coal demand. Final report, 9:28542 (R;US)
Input-Output Analysis
Energy disaggregated input-output model. Model applications guide, 9:28492 (R;US)
ENERGY DEPOSITION
See ENERGY ABSORPTION
ENERGY EFFICIENCY
Information Needs
Review of studies of research opportunities in energy conservation, 9:28684 (R;US)
ENERGY EXPENSES
Economic Impact
Disconnection of natural gas service to residential customers, 9:27878 (R;US)
ENERGY FACILITIES
Management
DOE's defederalization of the Laramie and Grand Forks Energy Technology Centers, 9:28489 (R;US)
Ownership
DOE's defederalization of the Laramie and Grand Forks Energy Technology Centers, 9:28489 (R;US)
Security
Development of deterrence strategies, 9:27986 (R;US)
Handbook for development of deterrence strategies, 9:27987 (R;US)
Site Selection
Siting energy projects: the need to consider cumulative impacts, 9:28508 (R;US)
ENERGY INFORMATION ADMINISTRATION
Program Management
EIA publications. New releases, 9:28488 (R;US)
Energy Information Administration needs to strenghten its computer systems development procedures, 9:28490 (R;US)

ENERGY MODELS
Econometrics and data of the 9 sector Dynamic General Equilibrium Model. Volume III. Final report , 9:28495 (R;US)
Nine sector Dynamic General Equilibrium Model: specification and structure. Volume II. Final report , 9:28494 (R;US)
Overview of the 9 sector Dynamic General Equilibrium Model. Volume I. Final report , 9:28493 (R;US)
Computerized Simulation
Multiobjective power plant siting models: optimization, heuristic approaches and generating alternative configurations. Part I. Chapter I-V. Draft final report, 9:28497 (R;US)
D Codes
Users guide to simulation with 9DGEM on the EIA/EDS computer. Volume IV. Final report, 9:28496 (R;US)
Programming
Multiobjective power plant siting models: optimization, heuristic approaches and generating alternative configurations. Part I. Chapter I-V. Draft final report, 9:28497 (R;US)
ENERGY POLICY
Impact of international cooperation in DOE's magnetic confinement fusion program, 9:28523 (R;US)
Contract Management
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Forecasting
Scoreboard on energy predictions, 9:28537 (J;US)
Planning
Long-term plan is needed to guide DOE and multiprogram laboratory research and development activities, 9:28516 (R;US)
ENERGY SECURITY CORPORATION

ETHANE
Chemical Reaction Yield
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
1,2-ETHANEDIOL
See GLYCOLS
ETHANOL
Biosynthesis
Bacterial cellulose fermentation. Final technical report, 9:28046 (R;US)

Decomposition
Decomposition of methanol, formaldehyde, and formic acid on nonpolar (1010), stepped (5051), and (0001) surfaces of ZnO by temperature-programmed decomposition, 9:28950 (J;US)
NMR Spectra
Temperature dependence of screening of ^{13}C nuclei in simple aliphatic alcohols, 9:28935 (RA;PL;In Polish)
Production
Biomass fermentation technology, Project No. 1. Final performance report. Cooperative research and training in biomass conversion and utilization, 9:28044 (R;US)
Cellulose-ethanol commercialization. Final report, 9:28047 (R;US)
Solvent Extraction
Biomass processing and product recovery, Project No. 2. Interim progress report. Cooperative research and training in biomass conversion and utilization, 9:28045 (R;US)
Synthesis
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
Toxicity
Restudy of the effectiveness of ingested ethyl alcohol to cause nondisjunction in mouse oocytes, 9:29483 (RA;US)

ETHANOL FUELS
Use for pure ethanol, ethanol-water mixtures, or ethanol with additives; for ethanol-gasoline mixtures, use GASOHOL.
Biosynthesis
Chemical Process Research and Development Program. FY 1983 annual report, 9:28855 (R;US)
Combustion Properties
Performance evaluation of 10% ethanol-gasoline blends in 1980 model year U.S. cars, 9:28708 (J;US)
Fuel Substitution
Performance evaluation of 10% ethanol-gasoline blends in 1980 model year U.S. cars, 9:28708 (J;US)
Production
Multiple uses of solar air in ethanol production. Summary report, 9:28182 (R;US)

Coal liquefaction. Exxon donor solvent process + flexicoking program, 9:27715 (R;DE;In German)
EDS coal liquefaction process development: Phase V. Quarterly technical progress report, October 1-December 31, 1983, 9:27720 (R;US)
Impact of pilot plant operations and concurrent development efforts on the projected performance and economics of a commercial EDS facility, 9:27721 (R;US)
Slurry drying of coal in the EDS process, 9:27718 (R;US)
Residues
EDS coal liquefaction process development: Phase V. Quarterly technical progress report, October 1-December 31, 1983, 9:27720 (R;US)
Pilot plant evaluation of Exxon Donor Solvent residue for the Texaco Coal Gasification Process. Final report, 9:27769 (R;US)
Reviews
Impact of pilot plant operations and concurrent development efforts on the projected performance and economics of a commercial EDS facility, 9:27721 (R;US)
EYE CATARACTS
See CATARACTS
EYES
See also CRYSTALLINE LENS
Edema
Ocular toxicity of 2,2,2-trifluoroethanol in rabbits, 9:29510 (J;US)
Necrosis
Ocular toxicity of 2,2,2-trifluoroethanol in rabbits, 9:29510 (J;US)
Protective Clothing
Standards for protective goggles for use in the cold. Final report, 9:28979 (R;US)

F

FABRIC FILTERS
Bench-Scale Experiments
Investigations of the feasibility of fabric filters at high temperatures and pressures for an energy saving method of gas purification, 9:27713 (R;DE;In German)
Electric Charges
Real-time measurements and control of particle charge as applied to electrostatically enhanced fabric filters. Technical progress report, 9:29156 (R;US)
Materials
Investigations of the feasibility of fabric filters at high temperatures and pressures for an energy saving method of gas purification, 9:27713 (R;DE;In German)
FABRICATION
Limited to the concepts of shaping and manufacturing, use of a more specific term is recommended; for large scale building see CONSTRUCTION.
Targets
Target fabrication and development in the Centre d'Etudes de Limeil, 9:29986 (R;FR)
FACILITIES (ACCELERATOR)

Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:28018 (RA;US)
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Liquid hydrocarbon fuels from syngas, 9:28016 (RA;US)
Metal speciation in Fe/ZSM-5 and Co/ZSM-5 relating to synthesis gas and ethylene conversion (Slides; little text), 9:28019 (RA;US)
Particle synthesis and properties of zeolite catalysts for synthesis gas - gasoline conversion, 9:28015 (RA;US)
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:28013 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)
Zeolite supported Ru in the F-T synthesis: effect of zeolite type, 9:28014 (RA;US)
Chemical Reaction Kinetics
Kinetic study using an iron Fischer-Tropsch catalyst (No text), 9:28024 (RA;US)
Chemical Reactors
Catalyst and reactor development for a slurry phase Fischer-Tropsch process, 9:28023 (RA;US)
Fischer-Tropsch synthesis in slurry reactor systems, 9:28022 (RA;US)
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:28013 (R;US)
Economics
Impact of developing technology on indirect liquefaction, 9:28020 (RA;US)
Meetings
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:28013 (R;US)
Parametric Analysis
Catalyst parametric studies (No text), 9:28025 (RA;US)
Performance Testing
Metal speciation in Fe/ZSM-5 and Co/ZSM-5 relating to synthesis gas and ethylene conversion (Slides; little text), 9:28019 (RA;US)
FISCHER-TROPSCH
MOBIL PROCESS/Catalysts
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:28043 (RA;US)
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:28021 (RA;US)
MOBIL PROCESS/Demonstration Plants
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:28043 (RA;US)
MOBIL PROCESS/Fluid Mechanics
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:28043 (RA;US)
MOBIL PROCESS/Mathematical Models
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:28021 (RA;US)
MOBIL PROCESS/Pilot Plants
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:28021 (RA;US)
FISHES
Aquaculture
Evaluation of liquid oxygen to increase channel catfish production in heated water raceways, 9:29417 (R;US)

Behavior
Avoidance responses of estuarine fish to sulfur dioxide. Final report, 9:29498 (R;US)
Reproduction
Pollutant body burdens and reproduction in Platichthys stellatus from San Francisco Bay. Annual progress report, year I, 9:29500 (R;US)
FISSION
Q-Value
Fission energy of uranium isotopes and transuranium elements, 9:29809 (RA;SU;In Russian)
FISSION CHAMBERS
Computerized Control Systems
A computer-controlled Travelling Flux Detector system for CANDU reactors, 9:28373 (J;US)
Design
A computer-controlled Travelling Flux Detector system for CANDU reactors, 9:28373 (J;US)
Performance
A computer-controlled Travelling Flux Detector system for CANDU reactors, 9:28373 (J;US)
FISSION FRAGMENTS
Angular Distribution
Transition-state theory for fission angular distributions: A flexible-rotor model, 9:29855 (J;US)
Internal Conversion
Muon conversion in fragments of prompt fission of thorium mesic atom, 9:29568 (RA;SU;In Russian)
FISSION NEUTRONS
RBE
Mammalian cytogenetics, 9:29444 (RA;US)
FISSION PRODUCTS
Neutron Reactions
Model for fission-product calculations, 9:29763 (R;US)
FISSIONABLE MATERIALS MANAGEMENT

FOREIGN POLICY
Economic Impact
Administration knowledge of economic costs of foreign policy export controls, 9:28503 (R;US)
FOREST LITTER
Natural organic debris on the forest floor.
Decomposition
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
Mineral Cycling
Litterfall sulfur and nitrogen inputs as influenced by power plant proximity, 9:29227 (J;NL)
FORESTS
Acid Rain
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29268 (J;US)
Microcosms
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
Soil Chemistry
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29268 (J;US)
Soils
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29230 (J;US)
FORMALDEHYDE
Decomposition
Decomposition of methanol, formaldehyde, and formic acid on nonpolar (1010), stepped (5051), and (0001) surfaces of ZnO by temperature-programmed decomposition, 9:28950 (J;US)
Emission
Formaldehyde emissions from combustion sources and solid formaldehyde resin containing products: potential impact on indoor formaldehyde concentrations, 9:29200 (R;US)
Health Hazards
Formaldehyde release from simulated wall panels insulated with urea-formaldehyde foam insulation, 9:29232 (J;US)
Inhalation
Induction and progression of neoplasia in tracheal epithelium, 9:29491 (RA;US)
Liquid Column Chromatography
Rapid determination of ppB levels of aldehydes in ambient air by high-performance liquid chromatography, 9:29197 (R;US)
Monitoring
Current status of measurement techniques and levels of formaldehyde in residences, 9:29199 (R;US)
Quantitative Chemical Analysis
Rapid determination of ppB levels of aldehydes in ambient air by high-performance liquid chromatography, 9:29197 (R;US)
Toxicity
Induction and progression of neoplasia in tracheal epithelium, 9:29491 (RA;US)
Vibrational States
Variational calculation of lower vibrational energy levels of formaldehyde X $^1A_1$, 9:29573 (J;US)
FORMALIN
See FORMALDEHYDE
FORMALITH
See FORMALDEHYDE
FORMIC ACID
Decomposition
Decomposition of methanol, formaldehyde, and formic acid on nonpolar (1010), stepped (5051), and (0001) surfaces of ZnO by temperature-programmed decomposition, 9:28950 (J;US)
FORMIC ALDEHYDE

FOSSIL-FUEL POWER PLANTS
Air Pollution
Aerosol signatures for receptor modeling. Project report, August 1, 1983-January 31, 1984, 9:29205 (R;US)
Burners
Evaluation of an advanced dual-register coal burner for utility boiler NO/sub x/ control. Final report, 9:28255 (R;US)
Cogeneration
Environmental aspects of district heating/cogeneration in the twin cities, 9:28695 (R;US)
Decommissioning
Coal-fired plants project retirement plan, 9:28253 (R;US)
Environmental Effects
Litterfall sulfur and nitrogen inputs as influenced by power plant proximity, 9:29227 (J;NL)
Fly Ash
Formation and transformation of particulate polycyclic organic matter emitted from coal fired power plants and oil shale retorting. Final report, 9:27802 (R;US)
Land Reclamation
Stabilization of power plant by-product storage sites for building development. Final report, 9:27799 (R;US)
Pollution Control Equipment
Utility FGD survey, July 1982-March 1983. Volume 1. Categorical summaries of FGD systems, 9:27797 (R;US)
Utility FGD survey, July 1982-March 1983. Volume 2. Design and performance data for operational FGD systems, 9:27798 (R;US)
Service Life
Coal-fired plants project retirement plan, 9:28253 (R;US)
Size
Coal-fired plants project retirement plan, 9:28253 (R;US)
Waste Disposal
Stabilization of power plant by-product storage sites for building development. Final report, 9:27799 (R;US)
FOUNDATIONS
Design
Geotechnical engineering study, 9:27754 (RA;US)
Recommendations
Geotechnical engineering study, 9:27754 (RA;US)
Site liquefaction analyses (Newman, KY; risk assessment), 9:27755 (RA;US)
Retrofitting
The experimentally determined effectiveness of insulation added to the exterior of residential foundations, 9:28638 (BA;US)
Thermal Insulation
The experimentally determined effectiveness of insulation added to the exterior of residential foundations, 9:28638 (BA;US)
FOUR-BODY PROBLEM
Resonating-Group Method
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
FRACTURED FORMATIONS
See FRACTURED RESERVOIRS
FRACTURED RESERVOIRS
Mapping
Determination of propped fracture length by detection of injected magnetic material with surface superconducting magnetometers. Annual report, Feb 82-Jan 83, 9:27849 (R;US)
FRAGMENTS (FALLOUT)
See FALLOUT
FRAGMENTS (FISSION)
See FISSION FRAGMENTS
FRANCE
Reactor Safety
French approach to nuclear power safety, 9:28466 (J;US)

FREE ELECTRON LASERS
Nonlinear Problems
Nonlinear effects in wiggler free-electron-lasers, 9:29001 (RA;IL)
FREE RADICALS
See RADICALS
FREONS
Electron Attachment
Electron attachment fo halocarbons of interest in gaseous dielectrics, 9:29553 (R;US)
Electron-Molecule Collisions
Electron attachment fo halocarbons of interest in gaseous dielectrics, 9:29553 (R;US)
FRESH WATER ECOSYSTEMS

FUCOSE
See HEXOSES
FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
CAT Scanning
CAT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28298 (R;US)
Computerized Tomography
MENT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28297 (R;US)
Destructive Testing
CAT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28298 (R;US)
MENT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28297 (R;US)
Performance
QUAD+ BWR Fuel Assembly demonstration program at Browns Ferry plant, 9:28272 (R;US)
Performance Testing
CAT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28298 (R;US)
Security Seals
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)
Specifications
QUAD+ BWR Fuel Assembly demonstration program at Browns Ferry plant, 9:28272 (R;US)
FUEL BUNDLES
See FUEL ELEMENT CLUSTERS
FUEL CANS
Corrosion
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Defects
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
Fuel-Cladding Interactions
Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
Performance
Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
Performance Testing
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Physical Radiation Effects
Development of materials for higher burn-up rates, 9:28314 (RA;DE;In German)
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Thermal Stresses
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
FUEL CELLS
See also ACID ELECTROLYTE FUEL CELLS
HYDROGEN FUEL CELLS
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
FUEL CHANNELS
Heat Transfer
Transient two phase flows. Refilling and rewetting of a hot horizontal tube, 9:29012 (R;CA)
Rewetting
Transient two phase flows. Refilling and rewetting of a hot horizontal tube, 9:29012 (R;CA)
FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE
FUEL CYCLE
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
Risk Assessment
Nuclear fuel cycle risk assessment: program summary through Fiscal Year 1983, 9:27982 (R;US)
Nuclear fuel cycle risk assessment: review and evaluation of existing records, 9:27981 (R;US)
FUEL ECONOMY
Equipment
Emissions and fuel economy of the Dresser Economizer, a retrofit device. Technical report, 9:28706 (R;US)
EPA (Environmental Protection Agency) evaluation of the V←70 Vapor Injector Device under Section 511 of the Motor Vehicle Information and Cost Savings Act, 9:28707 (R;US)
Evaluation of the IDALERT device of the Motor Vehicle Information and Cost Savings Act. Technical report, 9:28704 (R;US)
Evaluation of the Fuel Maximiser tm: a retrofit fuel economy device. Technical report, 9:28705 (R;US)
FUEL ELEMENT CLUSTERS
Dosimetry
Irradiation of four pencils fuel element clusters in the periphery of OSIRIS. Qualification of the calculation method by dosimetry, 9:28273 (R;FR;In French)
Performance Testing
Irradiation of four pencils fuel element clusters in the periphery of OSIRIS. Qualification of the calculation method by dosimetry, 9:28273 (R;FR;In French)
FUEL ELEMENTS
See also FUEL PINS
FUEL RODS
SPENT FUEL ELEMENTS
Burnup
Establishing a PWR burn-up library, 9:28334 (R;DE;In German)
Meetings
Fast breeder fuel element development, 9:28304 (R;DE;In German)
Thermal Stresses
Use of a heat transfer coefficient for describing the radiactive exchange between water vapour and the bounding walls. Final report, 9:28454 (R;US)
FUEL FEEDING SYSTEMS
Flowsheets
Pulverized coal metering, 9:27738 (RA;US)
Modifications
Slurry drying of coal in the EDS process, 9:27718 (R;US)
FUEL GAS
See also INTERMEDIATE BTU GAS
LOW BTU GAS
NATURAL GAS
Desulfurization
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Desulphurization of hot reducing gas by means of metal oxides in a fixed bed reactor, 9:28856 (R;DE;In German)

FUEL INJECTION SYSTEMS
Design
Centrifuge pellet injector for JET, 9:30003 (R;DE)
Pneumatic pellet injector for JET, 9:30004 (R;DE)
FUEL MOTION DETECTION
Computerized Simulation
Simulated fuel melt movement and relocation in two seven-pin-bundle geometries (SIMBATH out-of-pile experiments Vsub(Th) 74; Vsub(Th) 79), 9:28426 (R;DE)
FUEL OILS
See also HEATING OILS
Flame Propagation
Flame propagation in heterogeneous mixtures of fuel drops and air, 9:28700 (R;US)
Prices
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
FUEL PELLETS
Fabrication
Characteristics of mixed oxide fuel pellets and the respective source products, 9:28308 (RA;DE;In German)
Injection
Centrifuge pellet injector for JET, 9:30003 (R;DE)
Pneumatic pellet injector for JET, 9:30004 (R;DE)
Performance Testing
Fuel and fuel rod irradiation from an international angle, 9:28316 (RA;DE;In German)
Physical Radiation Effects
Fuel and fuel rod irradiation from an international angle, 9:28316 (RA;DE;In German)
FUEL PENCILS
See FUEL PINS
FUEL PINS
Construction
Work on the development of the structure of fuel elements, 9:28306 (RA;DE;In German)
Destructive Testing
Heat-transfer calculations for a potted (solid matrix embedded) subassembly, 9:28296 (R;US)
Fission Product Release
FRAS3 analysis of transient fission-gas behavior in PNL-10 fuel (LMFBR), 9:28397 (R;US)
Fuel-Cladding Interactions
Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
Irradiation Procedures
Steady-state irradiation experiments, 9:28315 (RA;DE;In German)
Performance
Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
Marginal conditions and goals in the development of fuel elements concerning core design, 9:28305 (RA;DE;In German)
Performance Testing
Extended overpower transient testing of oxide pins in EBR-II, 9:28396 (R;US)
Heat-transfer calculations for a potted (solid matrix embedded) subassembly, 9:28296 (R;US)
Steady-state irradiation experiments, 9:28315 (RA;DE;In German)
Specifications
Marginal conditions and goals in the development of fuel elements concerning core design, 9:28305 (RA;DE;In German)
Work on the development of the structure of fuel elements, 9:28306 (RA;DE;In German)
FUEL REPROCESSING PLANTS
See also IDAHO CHEMICAL PROCESSING PLANT
Control Systems
Control software architecture and operating modes of the Model M-2 maintenance system, 9:27905 (R;US)
Extraction Columns
Operating range, hold-up, droplet size and axial mixing of pulsed plate columns in highly disperse and low-continuity volume flows, 9:27914 (TJ;US)
Maintenance
Advanced teleoperation in nuclear applications: consolidated fuel reprocessing program, 9:27910 (R;US)
Analysis of the options - rationale for servomanipulator maintenance in future reprocessing plants, 9:27909 (R;US)
Control software architecture and operating modes of the Model M-2 maintenance system, 9:27905 (R;US)
Process Control
Analysis of process signals from a reprocessing plant, 9:27915 (TJ;US)
Remote Control
Advanced remotely maintainable force-reflecting servomanipulator concept, 9:27907 (R;US)
Advanced teleoperation in nuclear applications: consolidated fuel reprocessing program, 9:27910 (R;US)
Analysis of the options - rationale for servomanipulator maintenance in future reprocessing plants, 9:27909 (R;US)
Remote Handling Equipment
Advancement of remote systems technology: past perspectives and future plans, 9:27902 (R;US)
Dual arm master controller concept: consolidated fuel reprocessing program, 9:27908 (R;US)
Servomechanisms
Advanced remotely maintainable force-reflecting servomanipulator concept, 9:27907 (R;US)
Advanced teleoperation in nuclear applications: consolidated fuel reprocessing program, 9:27910 (R;US)
Analysis of the options - rationale for servomanipulator maintenance in future reprocessing plants, 9:27909 (R;US)
Control software architecture and operating modes of the Model M-2 maintenance system, 9:27905 (R;US)
Dual arm master controller concept: consolidated fuel reprocessing program, 9:27908 (R;US)
FUEL RODS
Burnup
Evaluation of power reactor fuel rod analysis capabilities. Phase 2 topical report. Volume 1. Data evaluation, 9:28269 (R;US)
High Burnup PWR Ramp Test Program. Fifth semi-annual progress report, October 1, 1982-March 31, 1983, 9:28405 (R;US)
Gamma Fuel Scanning
High Burnup PWR Ramp Test Program. Fifth semi-annual progress report, October 1, 1982-March 31, 1983, 9:28405 (R;US)
Inspection
Examination of fuel assembly for water cooled power reactors, 9:28264 (R;AT)
Meetings
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Thermal Stresses
High Burnup PWR Ramp Test Program. Fifth semi-annual progress report, October 1, 1982-March 31, 1983, 9:28405 (R;US)
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
FUEL SHEATHS

FUEL SLURRIES
Atomization
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Chemical Preparation
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)

Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Combustion
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Commercialization
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Devolatilization
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Drying
Slurry drying of coal in the EDS process, 9:27718 (R;US)
Economic Analysis
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization, 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Environmental Effects
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Flow Rate
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
International Energy Agency
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization, 9:27828 (R;US)
Market
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization, 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
PH Value
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Research Programs
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Rheology
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Technology Assessment
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization, 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary, 9:27827 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs, 9:27829 (R;US)
Viscosity
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)

G

GADOLINIUM 146
Electron Capture Decay
Studies on the electron capture decay of ^{146}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies, 9:29764 (R;DE;In German)
High Spin States
Collective and one-body degrees of freedom in high spin states, 9:29790 (R;DE;In German)
Magic Nuclei
Calculation of nucleus properties in a new magic region near Z = 64, 9:29767 (RA;SU;In Russian)
GADOLINIUM 147
Electron Capture Decay
Studies on the electron capture decay of ^{146}Gd, ^{147}Gd, ^{147}Eu and ^{150}Dy, as well as precision measurements of Qsub(EC) energies, 9:29764 (R;DE;In German)
GAGES (STRAIN)
See STRAIN GAGES
GALACTOSIDASE
Code numbers 3.2.1.22 and 3.2.1.23.
Protein Denaturation
Study of thermal denaturation of β-galactosidase by nuclear magnetic relaxation, 9:29324 (RA;PL;In Polish)
GALLBLADDER
See BILIARY TRACT
GALLIUM
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
GALLIUM ARSENIDES
Fermi Level
Independence of Fermi-level position and valence-band edge discontinuity at GaAs-Ge(100) interfaces, 9:28845 (J;US)
Hall Effect
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
Ion Implantation
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
Production
Production oriented III-V epitaxy, 9:29041 (R;DE;In German)
Superlattices
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
Valence
Independence of Fermi-level position and valence-band edge discontinuity at GaAs-Ge(100) interfaces, 9:28845 (J;US)
GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHIDES
Stimulated Emission
Room-temperature cw operation of InGaAsP/InGaP lasers at 727 nm grown on GaAs substrates by liquid phase epitaxy, 9:29006 (J;US)
GALLIUM PHOSPHIDES
Hall Effect
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
Ion Implantation
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
Production
Production oriented III-V epitaxy, 9:29041 (R;DE;In German)
Superlattices
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
GALLSTONES
See BILIARY TRACT
GAMMA CAMERAS
Image Processing
System for imaging plutonium through heavy shielding, 9:27994 (R;US)
GAMMA RADIATION
Attenuation
Gamma ray benchmark on the spent fuel shipping cask TN 12, 9:28982 (R;FR)
RBE
Radiation carcinogenesis, 9:29452 (RA;US)
GAMMA RADIOGRAPHY
Comparative Evaluations
Radiographic and radioscopic testing of coatings with a high absorption coefficient, 9:29026 (R;FR;In French)
Performance
Application of gamma absorptiometry to nondestructive testing, 9:29024 (R;FR;In French)
GAMMA SPECTROMETERS
Anticoincidence
Large-volume ultralow background germanium-germanium coincidence/anticoincidence gamma-ray spectrometer, 9:29135 (R;US)
Background Radiation
Installation for measurement of photon energy spectra at the presence of strong electron background, 9:29128 (RA;SU;In Russian)
Coincidence Circuits
Large-volume ultralow background germanium-germanium coincidence/anticoincidence gamma-ray spectrometer, 9:29135 (R;US)
Coincidence Methods
On-line system for gamma-spectroscopic investigations of nuclei and gypernuclei in a bremsstrahlung beam by the (meson-γ) coincidence method, 9:29129 (RA;SU;In Russian)
Flight Testing
Shuttle flight test of an advanced gamma-ray detection system. Final scientific report 1 Oct 82-31 Mar 83, 9:29115 (R;US)
On-Line Measurement Systems
On-line system for gamma-spectroscopic investigations of nuclei and gypernuclei in a bremsstrahlung beam by the (meson-γ) coincidence method, 9:29129 (RA;SU;In Russian)
GAS CHROMATOGRAPHY
Equipment Interfaces
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)
Research Programs
Quality engineering and control. Annual progress report, January-December 1981, 9:28882 (R;US)
GAS COOLANTS
See GASES
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS HEAT PUMPS
Gas-fired heat pump research and development: review and assessment. Final report, Sep 81-Feb 83, 9:28588 (R;US)
GAS LASERS

SYNTHESIS GAS
VAPORS
VOLCANIC GASES
Diffusion
Transport of gases and particles through poorly mixed interfacial sublayers, 9:29184 (RA;US)
Kinetic Equations
Analytical solutions of model equations for two phase gas mixtures: transverse velocity perturbations, 9:29580 (J;US)
Radiant Heat Transfer
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Thermal Conductivity
Review of gas-filled window technology summary report, 9:28611 (BA;US)

GASIFICATION
Any technique for converting coal or other products into gaseous fuel.
See also COAL GASIFICATION
IN-SITU GASIFICATION
Solid Wastes
Ash pond cost study, 9:27739 (RA;US)

GASKETS
Frequency Analysis
Frequency spectrum of an elastic Sierpinski gasket, 9:28984 (R;US)

GASOHOL
Previous to August, 1979 this concept was indexed as gasoline AND mixtures AND ethanol or methanol.
Performance Testing
Performance evaluation of ethanol-gasoline blend in late model U.S. vehicles, 9:28721 (BA;NZ)

GASOLINE
Combustion Properties
Performance evaluation of 10% ethanol-gasoline blends in 1980 model year U.S. cars, 9:28708 (J;US)
Fuel Substitution
Performance evaluation of 10% ethanol-gasoline blends in 1980 model year U.S. cars, 9:28708 (J;US)
Production
Two-stage slurry Fischer-Tropsch/ZSM-5 process of converting syngas to high octane gasoline, 9:28021 (RA;US)
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
Volatility
Impact assessment of reducing gasoline volatility. Final report, 9:27873 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASOLINE PLANTS
Design
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)

GASTROINTESTINAL TRACT
Biological Radiation Effects
^{211}At radiocolloid therapy: further observations and comparison with radiocollocis of ^{32}P, ^{165}Dy, and ^{90}Y, 9:29458 (J;US)

GAUGE INVARIANCE
Field Theories
Numerical studies of gauge field theories, 9:29684 (BA;US)
Symmetry Breaking
Spontaneously broken symmetries in nuclear physics, 9:29827 (RA;US)
Strong magnetic field in spontaneously broken gauge theories, 9:29678 (J;US)

GAUGE TRANSFORMATIONS
See GAUGE INVARIANCE

GENE LOCI
See GENES

GENERAL RELATIVITY THEORY
See also RELATIVITY THEORY
Coupling Constants
Finite temperature spinor pregeometry, 9:29897 (R;IT)
Electrodynamics
Equations of motion for a radiating charged particle in electromagnetic fields on curved spacetime, 9:29891 (R;IT)
Spinor Fields
Finite temperature spinor pregeometry, 9:29897 (R;IT)

See STEAM GENERATORS

GENES
Biological Radiation Effects
Mechanisms of mutagenesis and DNA repair, 9:29442 (RA;US)

GENETIC EFFECTS
Risk Assessment
Evaluation of existing mutagenicity bioassay for purposes of genetic risk assessment, 9:29485 (RA;US)

GENETIC ENGINEERING
Solid Wastes
Genetic engineering and the development of new pollution control technologies. Final report, 9:29261 (R;US)

GENITALS (FEMALE)
See FEMALE GENITALS

GEOCHEMISTRY
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
Computerized Simulation
EQ3/6 geochemical modeling task plan for Nevada Nuclear Waste Storage Investigations (NNWSI), 9:27958 (R;US)

GEOLOGIC DEPOSITS
See also COAL DEPOSITS
NATURAL GAS DEPOSITS
OIL SAND DEPOSITS
PETROLEUM DEPOSITS
SALT DEPOSITS
URANIUM DEPOSITS
Radiation Scattering Analysis
Multielement analysis of unweighed biological and geological samples using backscatter and fundamental parameters, 9:28897 (J;US)

GEOPRESSURED SYSTEMS
Geothermal Wells
Sweet lake geopressured-geothermal project Magma Gulf-Technadril/DOE Amoco Fee. Annual report, December 1, 1979-February 27, 1981. Volume I. Drilling and completion test well and disposal well, 9:28211 (R;US)

GEORGIA
Terrestrial Ecosystems
Nutrient budgets and internal cycling of N, P, K, Ca, and Mg in conventional tillage, no-tillage and old-field ecosystems on the Georgia piedmont, 9:29265 (J;US)

GEOTHERMAL FLUIDS
Thermal Expansion
Impact of fluid expansion and contraction on completion techniques for hot wells, 9:28229 (R;US)

GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS

HYDROTHERMAL SYSTEMS
MAGMA SYSTEMS
Geochemical Surveys
Hydrogeochemistry of the Qualibou Caldera Geothermal System, St. Lucia, West Indies, 9:28214 (R;US)
GEOTHERMAL WELLS
Heat Flow
Thermal data from well GD-1, Gibson dome, Paradox Valley, Utah, 9:28225 (R;US)
Temperature Logging
Investigation of mineral and thermomineral springs in the Eifel mountains regarding geothermal indications, 9:28191 (R;DE;In German)
Thermal data from well GD-1, Gibson dome, Paradox Valley, Utah, 9:28225 (R;US)
Well Completion
Impact of fluid expansion and contraction on completion techniques for hot wells, 9:28229 (R;US)
Well Drilling
Sweet lake geopressured-geothermal project Magma Gulf-Technadril/DOE Amoco Fee. Annual report, December 1, 1979-February 27, 1981. Volume I. Drilling and completion test well and disposal well, 9:28211 (R;US)
GEOTHERMOMETERS
Testing
Evaluation of the Na-K, Na-Li, K-Li, SiO_2 (Quartz), SiO_2 (Chalcedony), and Na-K-Ca geothermometers, 9:28232 (RA;US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMAN FR ORGANIZATIONS

VIK annual report 1982/83, 9:30064 (R;DE;In German)
GERMANIUM
Charged-Particle Transport
Projection factors of the ranges of low energy ions, 9:29870 (R;DE;In German)
Electron-Hole Droplets
Observation of chaotic behavior in an electron-hole plasma in Ge, 9:29884 (J;US)
Fermi Level
Independence of Fermi-level position and valence-band edge discontinuity at GaAs-Ge(100) interfaces, 9:28845 (J;US)
Films
Ultra-thin continuous Pb films by coevaporation with Ge, 9:28783 (RA;IL)
Neutron Diffraction
Structural study of the liquid germanium by means of thermal neutron scattering, 9:28728 (R;FR)
Physical Radiation Effects
Defects induced by annealing or irradiation in CZ silicon or germanium, 9:28731 (R;FR)
Spectra of primary displaced atoms in semiconductor caused by cosmic-ray protons, 9:28831 (RA;UA;In Russian)
Structure Factors
Structural study of the liquid germanium by means of thermal neutron scattering, 9:28728 (R;FR)
Valence
Independence of Fermi-level position and valence-band edge discontinuity at GaAs-Ge(100) interfaces, 9:28845 (J;US)
GERMANIUM ALLOYS
Microstructure
Rapid solidification and undercooling of Aluminum Germanium alloys: characterization and control of microstructure, 9:28762 (R;US)
Solidification
Rapid solidification and undercooling of Aluminum Germanium alloys: characterization and control of microstructure, 9:28762 (R;US)
GERMANY (FEDERAL REPUBLIC)

GKT PROCESS
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
GLASS
See also BOROSILICATE GLASS
Autoradiography
A study of water in glass by an autoradiographic method that utilizes tritiated water, 9:28850 (BA;US)
Corrosion Resistance
Quality control analysis of TA-23 glass seals for lithium ambient temperature batteries, 9:28482 (R;US)
Fracture Mechanics
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)
Ions
The characterization of individual redox ions in glasses, 9:28851 (BA;US)
Sealing Materials
Quality control analysis of TA-23 glass seals for lithium ambient temperature batteries, 9:28482 (R;US)
Strains
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)
Water
A study of water in glass by an autoradiographic method that utilizes tritiated water, 9:28850 (BA;US)
GLASSY METALS
See METALLIC GLASSES
GLAUBER'S SALT
See SODIUM SULFATES
GLUCOPROTEINS
Biosynthesis
Regulation of transport systems in cultured mammalian cells, 9:29339 (RA;US)
GLUCOSE
Fermentation
Bacterial cellulose fermentation. Final technical report, 9:28046 (R;US)
Metabolism
Quantitative autoradiography of ^{14}C-D-glucose metabolism of normal and traumatized rat brain using micro-absorption photometry, 9:29407 (R;DE;In German)
GLYCINE
Sulfates
Investigation of triproton groups mobility by measuring angular dependence of relaxation time T_1 in triglicine sulfate monocrystal, 9:28931 (RA;PL;In Polish)
GLYCINE HISPIDA
Biological Adaptation
Environmental stress mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 9:29320 (R;US)
Productivity
Impact of ozone on soybean yield, 9:29505 (J;US)
Thermal Stresses
Environmental stress mediated changes in transcriptional and translational regulation of protein synthesis in crop plants. Progress report, 9:29320 (R;US)
GLYCOCOLL
See GLYCINE
GLYCOLS
See also BUTANEDIOLS
POLYETHYLENE GLYCOLS

Indoor Air Pollution
Health hazard evaluation determination report number MHETA-82-006-9002, Sewell Coal Company, Number 1 Preparation Plant, Nettie, West Virginia, VA, 9:29217 (R;US)
GLYCOPROTEINS
See GLUCOPROTEINS
GLYCOSYL TRANSFERASES
Code number 2.4.
Biochemical Reaction Kinetics
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
Purification
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
GOBAR GAS
See INTERMEDIATE BTU GAS
METHANE
GOITER
Diagnosis
Results of scintigraphic goiter diagnostics of 1975 and 1976, 9:29386 (R;DE;In German)
GOLD
Charged-Particle Transport
Projection factors of the ranges of low energy ions, 9:29870 (R;DE;In German)
Electron Collisions
Measurement of the linear polarization of the photons in the elementary processes of bremsstrahlung production, 9:29562 (R;DE;In German)
Radiation Heating
Heavy ion beam heated cylinders: Planning for hot dense matter experiments at GSI, 9:29874 (R;DE)
GOLD 197 TARGET
Carbon 12 Reactions
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
Oxygen 16 Reactions
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
GOLD COMPOUNDS
Optical Properties
Optical properties of diffusion-produced AuSn, 9:28797 (J;US)
GOLD IONS
Energy Losses
Stopping of 200 GeV gold nuclei in nuclear emulsions, 9:29873 (RA;US)
GONADOTROPINS
Genetic Mapping
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
GRADED BAND GAP SOLAR CELLS
See CASCADE SOLAR CELLS
GRAFTS
Evaluation
Hydrogel modified materials surfaces for the ERDA artificial heart. Final report , 9:29412 (R;US)
GRAIN ALCOHOL
See ETHANOL
GRAIN SIZE
See also PARTICLE SIZE.
Measuring Methods
Ultrasonic determination of grain size in uranium, 9:28795 (R;US)
GRAND UNIFIED THEORY
Do 't Hooft anomaly equations know about Georgi-Glashow grand unification, 9:29667 (RA;IL)
Grand unified theories, 9:29656 (R;US)
Many-Dimensional Calculations
Modification of predictions of grand unified theories in the presence of spontaneous compactification, 9:29680 (J;US)
GRANITES
See also PEGMATITES
Mines
Geomechanics in hard rock mining-Lessons from two case histories, 9:27966 (J;US)
Rock Mechanics
Geomechanics in hard rock mining-Lessons from two case histories, 9:27966 (J;US)
GRAPHITE
Thermal Conductivity
The thermal transport properties of a POCO AXM-5Q1 graphite from 80 to 970 K, 9:28852 (BA;US)
GRAPHITE MODERATOR
See GRAPHITE
GRAVITATION
Grand Unified Theory
Modification of predictions of grand unified theories in the presence of spontaneous compactification, 9:29680 (J;US)
Quantization
Nelson's stochastic quantization of free linearized gravitational field and its Markovian structure, 9:29663 (R;IT)
GRAVITATIONAL INTERACTIONS
CPT Theorem
Constraints on the interactions of Majorana particles from CPT invariance, 9:29655 (J;US)
GRAVITY SURVEYS
Maps
Preparation of residual gravity maps for the southern Cascade Mountains, Washington using Fourier analysis, 9:28200 (R;US)
GREAT BRITAIN
See UNITED KINGDOM
GREENHOUSES
See also ATTACHED GREENHOUSES
Construction
Crete Public School, Crete, Nebraska. Final report, 9:28156 (R;US)
Solar Space Heating
Crete Public School, Crete, Nebraska. Final report, 9:28156 (R;US)
GREENLAND
Natural Gas Deposits
Geology and petroleum resources of basins in the Asian Arctic and offshore East Greenland, 9:27844 (R;US)
Offshore Sites
Geology and petroleum resources of basins in the Asian Arctic and offshore East Greenland, 9:27844 (R;US)
Petroleum Deposits
Geology and petroleum resources of basins in the Asian Arctic and offshore East Greenland, 9:27844 (R;US)
GROUND DISPOSAL
Environmental Impacts
Surface impoundment assessment national report, 9:29295 (R;US)
GROUND SOURCE HEAT PUMPS
Cost
High efficiency heat pump using ground heat source. Final report, 9:28582 (R;US)
Field Tests
Ground-coupled heat pump demonstration, 9:28975 (R;US)
Performance
High efficiency heat pump using ground heat source. Final report, 9:28582 (R;US)
GROUND WATER
Contamination
Methodology for modeling the migration of EOR chemicals in fresh water aquifers, 9:27865 (R;US)
Mitigative techniques and analysis of generic site conditions for ground-water contamination associated with severe accidents, 9:28446 (R;US)
Surface impoundment assessment national report, 9:29295 (R;US)
Geophysical Surveys
Geophysical methodology studies for military groundwater exploration. Final report, Aug 82-Aug 83, 9:29523 (R;US)
Radionuclide Migration
Comparison of analytical charge-form and equilibrium thermodynamic speciation of certain radionuclides, 9:29303 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)

Water Pollution Control
Evaluation of a surface application of limestone for controlling acid mine discharges from abandoned strip mines, Sewellsville, Ohio. Final report, 9:27816 (R;US)
Water Quality
Hydrogeologic investigation of the Ritchie Road site. Final report, 9:27806 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROWTH
Inhibition
Flooding and SO_2 stress interaction in Betula papyrifera and B. nigra seedlings, 9:29503 (J;US)
GROWTH INHIBITION
See GROWTH
GROWTH STIMULATION
See GROWTH
GUANIDINES
Nuclear Magnetic Resonance
Influence of anion on molecular dynamics of guanidine salts, 9:28930 (RA;PL;In Polish)
GUANINE
DNA Adducts
DNA dosimetry applied to problems in genetic toxicology, 9:29338 (RA;US)
GULF OF MEXICO
Continental Shelf
Gulf of Mexico index, September 1982-July 1983, 9:27860 (R;US)
GYPSUM CEMENTS
Mechanical Properties
Mechanical strength properties of gypsum/aggregate mixtures for applications in stemming design, 9:28837 (R;US)
GYROTRONS
See MICROWAVE AMPLIFIERS

H

HADRON-HADRON INTERACTIONS
Inclusive Interactions
Unusual initial and final state effects in quantum chromodynamics. Progress report, 9:29629 (R;US)
Quantum Chromodynamics
Hadron-hadron collisions at extreme energies: Light-cone QCD with an axial-vector anomaly current and an infrared fixed point, 9:29637 (J;US)
Scattering
Q.C.D. and the transition between "hard" and "soft" scattering at the SPS collider, 9:29584 (R;FR)
Total Cross Sections
Q.C.D. and the transition between "hard" and "soft" scattering at the SPS collider, 9:29584 (R;FR)
HADRONS
Bag Model
Magnetostriction of a quark bag and hadron polarizability, 9:29633 (R;XJ;In Russian)
Particle Production
Hadronic remnants in W and Z production, 9:29639 (J;US)
Polarizability
Magnetostriction of a quark bag and hadron polarizability, 9:29633 (R;XJ;In Russian)
Wave Functions
Hadronic wave functions and high momentum transfer interactions in quantum chromodynamics, 9:29686 (BA;US)
HAFNIUM
Separation Processes
Review of anhydrous zirconium-hafnium separation techniques. Information circular/1984, 9:28877 (R;US)
HAFNIUM OXIDES
Electric Conductivity
Phase equilibria and electrical conductivities in the HfO_2-Er_2O_3-Ta_2O_5 system, 9:28805 (R;US)
Phase Studies
Phase equilibria and electrical conductivities in the HfO_2-Er_2O_3-Ta_2O_5 system, 9:28805 (R;US)
HAIL
Isotope Ratio
Recent developments in the isotopic study of hail, 9:29518 (R;FR;In French and English)
HALL EFFECT
Quantization
Fractional quantization of the Hall effect, 9:29882 (R;US)
HALL GENERATORS

CHLORINATED ALIPHATIC HYDROCARBONS
FREONS
Chemical Radiation Effects
Novel radical anions and hydrogen atom tunneling in the solid state, 9:28965 (J;US)
Electron Attachment
Electron attachment fo halocarbons of interest in gaseous dielectrics, 9:29553 (R;US)
Electron-Molecule Collisions
Electron attachment fo halocarbons of interest in gaseous dielectrics, 9:29553 (R;US)
Teratogenesis
Specific locus studies with DBCP and HMPA, 9:29475 (RA;US)
Toxicity
Lack of effect of DBCP on the mouse testis, 9:29489 (RA;US)
Specific locus studies with DBCP and HMPA, 9:29475 (RA;US)
HANDS
Biomedical Radiography
Diagnosis of osteoarthropathia psoriatica: comparison of clinical, radiological and scintigraphic data, 9:29391 (RA;AT;In German)
Scintiscanning
Diagnosis of osteoarthropathia psoriatica: comparison of clinical, radiological and scintigraphic data, 9:29391 (RA;AT;In German)
HANFORD ENGINEERING DEVELOPMENT LABORATORY
Hot Cells
Nuclear fuel and cladding transient testing, 9:27901 (R;US)
HANFORD RESERVATION
Radiation Monitoring
Environmental surveillance at Hanford for CY 1983, 9:29244 (R;US)
HARBORS
Dredging
Coal port analysis, 9:27820 (R;US)
Economic Analysis
Western US steam coal exports to the Pacific Basin: port and marine task group (Data on 26 possible Western USA ports and terminal facilities), 9:27823 (R;US)
HASTELLOY X
Creep
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
Fatigue
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
Chemical Analysis
Design and development of a hazardous waste reactivity testing protocol. Final report, Jun 82-Aug 83, 9:29263 (R;US)
Classification
Calculating the chemical hazard of radioactive waste, 9:27941 (R;US)

Combustion
Evaluation of the feasibility of incinerating hazardous waste in high-temperature industrial processes. Final report, 9:28681 (R;US)
Environmental Impacts
Evaluation of the feasibility of incinerating hazardous waste in high-temperature industrial processes. Final report, 9:28681 (R;US)
Waste Disposal
Installation restoration program. Phase I. Records search, Selfridge Air National Guard Base, Mount Clemens, Michigan, 9:29281 (R;US)
Installation restoration program records search for 158 tactical fighter group, Vermont Air National Guard, Burlington international airport, 9:29282 (R;US)

HCDA
See REACTOR CORE DISRUPTION

H-COAL PROCESS
Ashes
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Process Solutions
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)
Tar
Instrumental neutron activation analysis in the measurement of trace element distribution at two coal conversion plants, 9:27782 (R;US)

HCP LATTICES
Dislocations
Relationship between the electronic structure and the glide in the hexagonal close packed metals, 9:28726 (R;FR)

HD 8077
See NICKEL BASE ALLOYS

HDO
See DEUTERIUM COMPOUNDS

HEALTH HAZARDS
Research Programs
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)

Anomalons: statistical fluctuation or physical fact, 9:29865 (J;GB)
Anomalous nuclei and a nonstatic metastable σ-tau phase, 9:29829 (RA;US)
Are "anomalons" a bag ful'o colorful nucleons, 9:29833 (RA;US)
Are anomalons still provocative: a summary of the present experimental situation, 9:29781 (RA;US)
Nuclear chromodynamics and "anomalons", 9:29831 (RA;US)
Pion condensates as anomalons, 9:29830 (RA;US)
Some anomalon phenomenology, 9:29832 (RA;US)
Studies of anomalous projectile fragments with lead-glass, plastic track detectors, and Cerenkov detectors, 9:29733 (RA;US)
Cascade Theory
Coalescence model apd the Pauli quenching in high-energy heavy-ion collisions, 9:29822 (R;XJ)
Direct Reactions
Description of heavy-ion scattering by direct multistep reaction in the region between quasielastic and deep-inelastic reactions, 9:29747 (RA;DE;In German)
Energy Density
Thermalization of central products in ultra-relativistic heavy ion collisions, 9:29851 (RA;US)
Excitation
Selective population of high-j states via heavy-ion induced transfer reactions, 9:29864 (J;GB)
Fission
Dissipative phenomena: fusion, fast fission and quasifission, 9:29804 (R;FR)
Quasi-molecular structures in nuclear systems, 9:29828 (RA;US)
Fragmentation
Multifragmentation and the partition of angular momentum: General statistical theory, 9:29857 (J;US)
Phase-space constraints on the momenta of projectile fragments, 9:29839 (RA;US)
Fusion Reactions
Dissipative phenomena: fusion, fast fission and quasifission, 9:29804 (R;FR)
Hydrodynamic Model
Critical phenomena at low temperature, 9:29837 (RA;US)
Scaling properties in the hydrodynamical description of nucleus nucleus collisions at intermediate energies, 9:29836 (RA;US)
Transverse expansion at central rapidities in ultra-relativistic heavy ion collisions, 9:29846 (RA;US)
Hydrodynamics
Hydrodynamical aspects of ultrarelativistic heavy ion collisions, 9:29845 (RA;US)
Meetings
Proceedings of the 6th high energy heavy ion study and 2nd workshop on anomalons, 9:29691 (R;US)
Multiple Production
Analysis of the high multiplicity events in ultra-relativistic heavy ion collisions, 9:29777 (RA;US)
Central collisions of heavy ions in the dual parton model, 9:29850 (RA;US)
Collective effects in subthreshold pion production, 9:29771 (RA;US)
Particle densities in ultrarelativistic heavy ion reactions extrapolated from proton-nucleus collisions, 9:29776 (RA;US)
Nuclear Fireball Model
Expansion of the fireball after a high energetic heavy ion reaction, 9:29808 (R;DE;In German)
Nuclear Models
Critical phenomena at low temperature, 9:29837 (RA;US)
Phase-space constraints on the momenta of projectile fragments, 9:29839 (RA;US)
Shock fronts without thermalization in ultrarelativistic heavy-ion reactions, 9:29847 (RA;US)
Nuclear Potential
Fission cross sections and potential of heavy ion interaction, 9:29821 (RA;SU;In Russian)
Nuclear Reaction Kinetics
Stopping process of GeV particles in target nuclei, 9:29844 (RA;US)
Particle Production
Composite particle production measured with the plastic ball, 9:29774 (RA;US)
Pion production from peripheral heavy-ion collisions through coherent isobar and isobaric analog giant resonance formation, 9:29841 (RA;US)
Subthreshold pion production in nucleus-nucleus collisions - a co-operative process, 9:29840 (RA;US)

Two particle correlations observed with the plastic ball detector, 9:29755 (RA;US)
Parton Model
Central collisions of heavy ions in the dual parton model, 9:29850 (RA;US)
Partons in nuclear collisions before recombination, 9:29849 (RA;US)
Quark Matter
Hydrodynamical aspects of ultrarelativistic heavy ion collisions, 9:29845 (RA;US)
Partons in nuclear collisions before recombination, 9:29849 (RA;US)
Possible candidates for quark-gluon plasma in the JACEE emulsion chamber, 9:29779 (RA;US)
Shock fronts without thermalization in ultrarelativistic heavy-ion reactions, 9:29847 (RA;US)
Stopping process of GeV particles in target nuclei, 9:29844 (RA;US)
Strangeness and phase changes in hot hadronic matter, 9:29852 (RA;US)
Thermalization of central products in ultra-relativistic heavy ion collisions, 9:29851 (RA;US)
Transverse expansion at central rapidities in ultra-relativistic heavy ion collisions, 9:29846 (RA;US)
Quasi-Fission
Dissipative phenomena: fusion, fast fission and quasifission, 9:29804 (R;FR)
Spallation
Active multitarget experiment for anomalons, 9:29133 (RA;US)
Detector for the measurement of projectile fragment interaction cross sections, 9:29693 (RA;US)
Statistical Models
Multifragmentation and the partition of angular momentum: General statistical theory, 9:29857 (J;US)
Thermodynamics
Entropy production by nonquasistatic phase transitions in high-energy heavy-ion reactions, 9:29848 (RA;US)

HEAVY ION SPECTROMETERS
Superconducting Junctions
High-energy heavy ion spectrometer, 9:29127 (RA;SU;In Russian)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Charge State
Ab initio calculations of the charge state of a fast heavy ion stopping in a finite temperature target, 9:30034 (J;FR)
Radioactivity
Electromagnetic dissociation of radioactive heavy-ion beams, 9:29066 (R;US)
Range
Projection factors of the ranges of low energy ions, 9:29870 (R;DE;In German)
Stopping Power
Ab initio calculations of the charge state of a fast heavy ion stopping in a finite temperature target, 9:30034 (J;FR)
Heavy ion beam heated cylinders: Planning for hot dense matter experiments at GSI, 9:29874 (R;DE)

HEAVY NUCLEI
For nuclei from mass 181 upwards.

VISCOSITY

HELA CELLS
X Radiation
Effects of combined X-radiation and UV-radiation on HeLa cells, 9:29434 (R;DE;In German)

HELIOSTATS
Beam Optics
Collector subsystem official performance test: Test Procedure 118. Revision A, 9:28124 (R;US)
Collector substystem heliostat targeting verification: Test Procedure 116, 9:28123 (R;US)
Computerized Control Systems
10 MWe collector subsystem software/firmware functional requirements specification, 9:28115 (R;US)
Control system theory of operation, 9:28120 (R;US)
Control Systems
Collector sybsystem Dual Heliostat array controller test procedure 106, 9:28122 (R;US)
System description document: collector subsystem for the 10 MWe solar thermal central receiver pilot plant. Phase II, 9:28116 (R;US)
Design
System description document: collector subsystem for the 10 MWe solar thermal central receiver pilot plant. Phase II, 9:28116 (R;US)
Equipment
Supplemental spares plan: heliostat field subsystem for 10 megawatt solar power systems/central receiver system, 9:28119 (R;US)
Maintenance
Maintenance instructions: heliostat field subsystem for 10 megawatt solar power system/central receiver system, 9:28118 (R;US)
Supplemental spares plan: heliostat field subsystem for 10 megawatt solar power systems/central receiver system, 9:28119 (R;US)
Manuals
Heliostat Stimulator operator's manual, 9:28117 (R;US)
Solar Tracking Systems
Collector subsystem official performance test: Test Procedure 118. Revision A, 9:28124 (R;US)
Testing
Collector sybsystem Dual Heliostat array controller test procedure 106, 9:28122 (R;US)
Collector subsystem heliostat readiness test: test procedure 101. Revision 0, 9:28121 (R;US)
Collector substystem heliostat targeting verification: Test Procedure 116, 9:28123 (R;US)

HELIUM
Desorption
Gasemission and surface modifications during helium implantation on nickel surfaces, 9:28774 (R;DE;In German)
Second Sound
Converging second sound shock waves in superfluid helium, 9:29581 (J;US)

HELIUM 3
Electromagnetic Form Factors
^{3}He electromagnetic form factors: A simple theoretical approach, 9:29695 (R;DE)

HELIUM 3 REACTIONS
Bremsstrahlung
Effect of nuclear structure on bremsstrahlung spectra of multiply charged particles, 9:29749 (RA;SU;In Russian)
Coulomb Scattering
Method of accounting for Coulomb effects in N/D equations and its application to p-^{3}He and ^{3}He-^{4}Ho scattering, 9:29708 (RA;SU;In Russian)
Differential Cross Sections
Effect of nuclear structure on bremsstrahlung spectra of multiply charged particles, 9:29749 (RA;SU;In Russian)
Spallation
Are there anomalons at charge two: a comparison of helium induced primary and secondary interactions in nuclear

research emulsion at about 2 GeV/nucleon, 9:29727 (RA;US)

HELIUM 3 TARGET
Electron Reactions
Electron scattering and few nucleon systems, 9:29699 (R;FR)
Four-Body Problem
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Neutron Reactions
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Photonuclear Reactions
Measurement of coherent pion-photoproduction on the ^{3}He/^{3}H isodublett, 9:29696 (R;DE)
Pion Minus Reactions
Differential cross section for elastic π^{+-} helium isotopes scattering, 9:29698 (R;FR)
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Pion Plus Reactions
Differential cross section for elastic π^{+-} helium isotopes scattering, 9:29698 (R;FR)
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Pion Reactions
Isospin dependence of pion absorption on nucleon pairs at T/sub π/ = 65 MeV, 9:29711 (J;US)
Proton Reactions
Method of accounting for Coulomb effects in N/D equations and its application to p-^{3}He and ^{3}He-^{4}Ho scattering, 9:29708 (RA;SU;In Russian)

HELIUM 4
Neutron Diffraction
Momentum density of hcp ^{4}He, 9:28848 (J;US)

HELIUM 4 BEAMS
Ion Implantation
Gasemission and surface modifications during helium implantation on nickel surfaces, 9:28774 (R;DE;In German)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Alpha Reactions
$\alpha\alpha$ and αp interactions at the CERN ISR, 9:29607 (RA;US)
Radial oscillation excitation of ^{8}Be in α-α scattering, 9:29701 (RA;SU;In Russian)
Helium 3 Reactions
Method of accounting for Coulomb effects in N/D equations and its application to p-^{3}He and ^{3}He-^{4}Ho scattering, 9:29708 (RA;SU;In Russian)
Pion Minus Reactions
Differential cross section for elastic π^{+-} helium isotopes scattering, 9:29698 (R;FR)
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Pion Plus Reactions
Differential cross section for elastic π^{+-} helium isotopes scattering, 9:29698 (R;FR)
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Proton Reactions
$\alpha\alpha$ and αp interactions at the CERN ISR, 9:29607 (RA;US)
Determination of P wave resonance parameters in pα scattering, 9:29709 (RA;SU;In Russian)

HEMOGLOBIN
Mutations
Mammalian biochemical genetics, 9:29470 (RA;US)

HETEROCHROMATIN
Biological Functions
Chromosomes of antelope squirrels (genus Ammospermophilus): a systematic banding analysis of four species with unusual constitutive heterochromatin, 9:29366 (J;DE)

HETEROCHROMOSOMES
See also X CHROMOSOME
Y CHROMOSOME
Chromosomal Aberrations
High-resolution banding of mouse prometaphase-prophase chromosomes, 9:29376 (RA;US)
Genetic Mapping
High-resolution banding of mouse prometaphase-prophase chromosomes, 9:29376 (RA;US)

HETEROCYCLIC COMPOUNDS
See also FURANS
THIONAPHTHENES
Chemical Shift
Study of regioselectivity of reaction of donor centres of enamines R_1-C_1O-C_2 = C_3-NHR_3 using NMR, 9:28932 (RA;PL;In Polish)
Reduction
Chemical Process Research and Development Program. FY 1983 annual report, 9:28855 (R;US)

HEWLETT-PACKARD COMPUTERS

HEXOSES
See also GLUCOSE
Fermentation
Biomass fermentation technology, Project No. 1. Final performance report. Cooperative research and training in biomass conversion and utilization, 9:28044 (R;US)

HFIR REACTOR
Reactor Operation
High flux isotope reactor. Quarterly report, July-September 1983, 9:28389 (R;US)

HIGGS BOSONS
Mass
Mass of the Higgs boson in the canonical realization of the Salam-Weinberg theory, 9:29645 (J;US)
Particle Production
Production of nonstandard Higgs bosons in e^+e^- collisions p, 9:29638 (J;US)
Some comments on heavy fermions and leptoquarks, 9:29643 (J;US)
Weinberg-Salam Gauge Model
Mass of the Higgs boson in the canonical realization of the Salam-Weinberg theory, 9:29645 (J;US)

HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Research Programs
Annual progress report of the High Energy Physics Group, 9:29591 (R;US)
High Energy Physics Group. Annual progress report, fiscal year 1983, 9:29590 (R;US)
Research program in elementary particle theory. Progress report, 1984, 9:29628 (R;US)
Task A. Study of large P/sub T/ direct photon production at the ISR. Task B. Direct photon production at the tevatron (E-706). Task C. Search for fractional charge particles in semiconductors. Progress report, June 1, 1983-May 31, 1984, 9:29589 (R;US)
Theoretical high energy physics. Progress report, May 1, 1983-April 30, 1984, 9:29627 (R;US)

HIGH SPIN STATES
Selective population of high-j states via heavy-ion induced transfer reactions, 9:29864 (J;GB)

HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS

HIGH VOLTAGE ALTERNATING CURRENT SYSTEMS
See HVAC SYSTEMS

HIGH-LEVEL RADIOACTIVE WASTES
Packaging
Evaluation of iron-base materials for waste package containers in a salt repository, 9:27950 (R;US)
Radiation Hazards
Determination of metabolic data appropriate for HLW dosimetry (ICRP-30), I, 9:29438 (R;US)
Radioactive Waste Disposal
Evaluation of crystalline rock as a medium for isolation of high-level waste, 9:27962 (J;US)
Evaluation of salt as a medium for isolation of high-level waste, 9:27963 (J;US)
Radioactive Waste Management
Economic analysis of waste management alternatives for reprocessing wastes, 9:27951 (R;US)
Transportation Systems
Advanced transportation system options for spent fuel and high-level waste, 9:27922 (R;US)
Waste Transportation
CASMO: a computer program to calculate spent fuel and high-level waste transportation mileage and costs, 9:27918 (R;US)
HIGH-PURITY GE DETECTORS
Energy Resolution
Application of superhigh-purity germanium detector for precise measurements of threshold energies of continuous positron spectra, 9:29130 (RA;SU;In Russian)
HIROSHIMA
Nuclear Weapons
Little Boy replication: justification and construction, 9:29172 (R;US)
HOG FUEL

HOLMIUM 165 TARGET
Deuteron Reactions
Modification of boundary conditions in an optical scattering model, 9:29752 (RA;SU;In Russian)
HORDEUM
See BARLEY
HOSPITALS
Geothermal Water Heating
Direct utilization of geothermal resources at Warm Springs State Hospital, Warm Springs, Montana. Final report, January 31, 1979-June 30, 1983, 9:28231 (R;US)
HOT GAS CLEANUP
Fabric Filters
Investigations of the feasibility of fabric filters at high temperatures and pressures for an energy saving method of gas purification, 9:27713 (R;DE;In German)
Filters
Hot gas cleanup using ceramic cross flow membrane filters. Final report, 9:28254 (R;US)
HOT WATER HEATERS
See WATER HEATERS
HOT-DRY-ROCK SYSTEMS
Fracturing
Improvement of tubulars used for fracturing in hot dry rock wells, 9:28228 (R;US)
Geothermal Wells
Insulating geothermal well casings from thermal stress with nitrogen gas or nitrogen foam, 9:28226 (R;US)
Hydraulic Fracturing
Reservoir modeling of the Phase II Hot Dry Rock System, 9:28198 (R;US)
Mathematical Models
Reservoir modeling of the Phase II Hot Dry Rock System, 9:28198 (R;US)
Reservoir Temperature
Using chemically reactive tracers to determine temperature characteristics of geothermal reservoirs, 9:28227 (R;US)
Tracer Techniques
Using chemically reactive tracers to determine temperature characteristics of geothermal reservoirs, 9:28227 (R;US)
Well Casings
Improvement of tubulars used for fracturing in hot dry rock wells, 9:28228 (R;US)
HOT-WATER PROCESSES
Waste Water
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
HOUSEHOLDS
Air Conditioners
Durable-good choice: a benefit-cost approach applied to air conditioning, 9:28595 (J;NL)
Decision Making
Durable-good choice: a benefit-cost approach applied to air conditioning, 9:28595 (J;NL)
Energy Conservation
Consumer energy conservation policies in Australia, 9:28534 (R;DE)
Energy Consumption
Energy and household expenditure patterns. Volume 1. Residential energy demand. Final report, 9:28584 (R;US)
HOUSES
Air Infiltration
A predictive air infiltration model - Field validation and sensitivity analysis, 9:28598 (BA;IE)
Calculating infiltration: Implications for a construction quality standard, 9:28644 (BA;US)
Measured effect of forced ventilation on house infiltration rate, 9:28646 (BA;US)
Attached Greenhouses
Solar greenhouse, 9:28155 (R;US)
Cooling Load
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
Design
Pan abode naturally passive solar homes, 9:28147 (R;US)
Solar home show 2, 9:28142 (R;US)
Energy Audits
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
Energy Conservation
Acoustical benefits resulting from insulation and air-leakage-control retrofits in family housing units, 9:28642 (BA;US)
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
Field experiences underscore the importance of moisture control in energy-efficient homes, 9:28629 (BA;US)
NAHB thermal performance guidelines: 1982 methodology update, 9:28643 (BA;US)
Energy Consumption
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
TVA home insulation program energy saving, 9:28593 (R;US)
Floors
Annual variation of temperature field and heat transfer under heated ground surfaces: Slab-on-grade floor heat loss calculations, 9:28651 (BA;US)
Dynamics of heat losses from uninsulated basement floors in houses, 9:28648 (BA;US)
Formaldehyde
Current status of measurement techniques and levels of formaldehyde in residences, 9:29199 (R;US)
Foundations
The experimentally determined effectiveness of insulation added to the exterior of residential foundations, 9:28638 (BA;US)
Heat Gain
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Heat Losses
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
Heating Load
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
Humidity Control
Field experiences underscore the importance of moisture control in energy-efficient homes, 9:28629 (BA;US)
Field observations of moisture and organism damage in insulated houses, 9:28627 (BA;US)

HVAC Systems
Measured effect of forced ventilation on house infiltration rate, 9:28646 (BA;US)
Mathematical Models
Calculating infiltration: Implications for a construction quality standard, 9:28644 (BA;US)
Moisture
Field experiences underscore the importance of moisture control in energy-efficient homes, 9:28629 (BA;US)
Field observations of moisture and organism damage in insulated houses, 9:28627 (BA;US)
Noise Pollution Abatement
Acoustical benefits resulting from insulation and air-leakage-control retrofits in family housing units, 9:28642 (BA;US)
Optimization
A method for optimization of south window areas in houses, 9:28630 (BA;US)
Passive Solar Heating Systems
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
Iowa Project-Passive. Final report, 9:28146 (R;US)
Pan abode naturally passive solar homes, 9:28147 (R;US)
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Solar home show 2, 9:28142 (R;US)
Passive Solar Water Heaters
Iowa Project-Passive. Final report, 9:28146 (R;US)
Retrofitting
Acoustical benefits resulting from insulation and air-leakage-control retrofits in family housing units, 9:28642 (BA;US)
Solar Architecture
A method for optimization of south window areas in houses, 9:28630 (BA;US)
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Solar Heating Systems
Solar energy effectiveness in Kirksville (SEEK). Final report, 9:28158 (R;US)
Space HVAC Systems
Parameters affecting air infiltration and air tightness in thirty-one east Tennessee homes, 9:28571 (R;US)
Temperature Monitoring
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
Thermal Efficiency
Development of a simplified and manual energy calculation procedure for residences, 9:28636 (BA;US)
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
NAHB thermal performance guidelines: 1982 methodology update, 9:28643 (BA;US)
Thermal performance of the Blouin superinsulated house, 9:28632 (BA;US)
Thermal Insulation
Effect of insulating crawlspace walls in residential structures, 9:28640 (BA;US)
Field observations of moisture and organism damage in insulated houses, 9:28627 (BA;US)
Thermal performance of the Blouin superinsulated house, 9:28632 (BA;US)
Ventilation
Measured effect of forced ventilation on house infiltration rate, 9:28646 (BA;US)
Ventilation Systems
Calculating infiltration: Implications for a construction quality standard, 9:28644 (BA;US)
Walls
Effect of insulating crawlspace walls in residential structures, 9:28640 (BA;US)
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Weatherization
TVA home insulation program energy saving, 9:28593 (R;US)
Windows
A method for optimization of south window areas in houses, 9:28630 (BA;US)
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)

HP COMPUTERS
Data Transmission
DEC LSI-11/HP9895A software, 9:30085 (R;US)

HPCI
Heat Transfer
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)
Hydraulics
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)
Thermal Shock
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)

HPRR REACTOR
Reactor Operation
Twenty years of health physics research reactor operation, 9:28390 (J;US)

HTGR TYPE REACTORS
Blowers
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Control Rod Drives
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Design
High Temperature Gas-Cooled Reactor Program. Modular HTGR systems design and cost summary (Methane reforming; steam cycle-cogeneration), 9:28292 (R;US)
Fuel Cycle
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Reactor Cores
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Reactor Materials
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Licensee event report (LER) compilation. Volume 3, Number 3, 9:28435 (R;US)
Reactor Vessels
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
Remote Handling Equipment
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)
RHR Systems
HTGR applications program advanced systems. Semiannual report, April-October 1983, 9:28291 (R;US)

BENZENE
BENZOPYRENE
FLUORENE
POLYCYCLIC AROMATIC HYDROCARBONS
PYRENE
STYRENE
TETRALIN
Atmospheric Chemistry
Atmosphere as stockroom and pre-reactor for gas-liquid reactions, 9:29186 (R;US)
Catalytic Cracking
Nuclear magnetic resonance investigation of fluorinated oxide catalysts, 9:28963 (J;US)
Synthesis
Liquid hydrocarbon fuels from syngas, 9:28016 (RA;US)

HYDROCYANIC ACID
Chemical Reactions
Indirect determination of cyanide by single-column ion chromatography, 9:28896 (J;US)
Desorption
Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)

HYDROCYCLONES
See CYCLONE SEPARATORS

HYDRODYNAMICS
See also MAGNETOHYDRODYNAMICS
Mathematical Models
Hydrodynamic mass, 9:28351 (R;US)

HYDROELECTRIC POWER
Resource Potential
Future of hydropower, 9:28053 (R;US)
Supply and Demand
State energy data report. Consumption estimates, 1960-1982, 9:27855 (R;US)

HYDROELECTRIC POWER PLANTS
See also PUMPED STORAGE POWER PLANTS
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Cost Benefit Analysis
Electric Power Quarterly, October-December 1983, 9:28545 (R;US)
Reliability
Hydropower reliability study. Final report, 9:28054 (R;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Solutions
Densities of dilute uranium hexafluoride solutions, 9:28915 (R;US)

HYDROGEN
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
Chemisorption
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:28040 (J;US)
Combustion
Hydrogen behavior in light-water reactors, 9:28464 (J;US)
Combustion Kinetics
Stretch effects in plane premixed hydrogen-air flames, 9:28974 (R;US)
Compression
Makeup hydrogen production from filter cake or Kerr-McGee ash concentrate using an alternative coal feedstock, 9:27750 (RA;US)
Revised feed case vs base case using Texaco gasification, 9:27749 (RA;US)
Desorption
Method of enhancing selective isotope desorption from metals, 9:30046 (P;US)
Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)
Diffusion
Environment and fracture ($Fe_{40}Ni_{40}P_{14}B_6$), 9:28763 (R;US)

HYDROGEN 1 MINUS BEAMS
Beam Extraction
Extraction of H^- beams from a magnetically filtered multicusp source, 9:29576 (J;US)
Beam Production
Extraction of H^- beams from a magnetically filtered multicusp source, 9:29576 (J;US)

HYDROGEN 1 TARGET
Antiproton Reactions
Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV, 9:29775 (RA;US)
Polarized Targets
Construction and test of a polarized proton target, 9:29099 (R;DE;In German)
Proton Reactions
Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV, 9:29775 (RA;US)
Triton Reactions
Study on the role of two-and multi-particle interactions in low-nucleon systems, 9:29703 (RA;SU;In Russian)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN 4
Hypernuclei
Weak-coupled hypernuclear systems, 9:29601 (RA;SU;In Russian)

HYDROGEN CYANIDES
See HYDROCYANIC ACID

HYDROGEN DONOR REACTIONS
See HYDROGEN TRANSFER

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN FUEL CELLS
Design
Steam reforming of fuel to hydrogen in fuel cell, 9:28569 (P;US)
Hydrogen Generators
Steam reforming of fuel to hydrogen in fuel cell, 9:28569 (P;US)

HYDROGEN HYDROXIDES
See WATER

HYDROGEN MINUS 1 BEAMS
See HYDROGEN 1 MINUS BEAMS

HYDROGEN NITRATES
See NITRIC ACID
HYDROGEN PEROXIDE
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
HYDROGEN PHOSPHATES
See PHOSPHORIC ACID
HYDROGEN PRODUCTION
Kerr-McGee MAR case vs. Filter Cake MAR (BASE) case, 9:27748 (RA;US)
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Makeup hydrogen production from filter cake or Kerr-McGee ash concentrate using an alternative coal feedstock, 9:27750 (RA;US)
Revised feed case vs base case using Texaco gasification, 9:27749 (RA;US)
Cost
Economics of hydrogen production: the next twenty-five years, 9:28543 (R;US)
Electrolysis
Activities at the Brookhaven National Laboratory integrated test bed for advanced hydrogen technology, 9:28010 (R;US)
High temperature electrolysis of water vapour, HOT ELLY phase II A, 9:28007 (R;DE;In German)
Rationale for US DOE energy storage program in hydrogen technology, 9:28008 (R;US)
Water vapor electrolysis: systems considerations and cost/performance benefits, 9:28009 (R;US)
Photoelectrochemical Cells
Photoelectrochemistry at iron oxide electrodes. Final technical report (Iron oxide electrodes for photoelectrolysis of H_2O), 9:28070 (R;US)
Steam Reformer Processes
Steam reforming of fuel to hydrogen in fuel cell, 9:28569 (P;US)
HYDROGEN STORAGE
Rationale for US DOE energy storage program in hydrogen technology, 9:28008 (R;US)
HYDROGEN SULFIDES
Chemiluminescence
Chemiluminescent detection of reduced sulfur compounds with ozone, 9:29231 (J;US)
Corrosive Effects
Fatigue studies of drill pipe immersed in drilling mud with H_2S and CO_2. Final report, October 1, 1980-July 31, 1983, 9:27847 (R;US)
Oxidation
Chemiluminescent detection of reduced sulfur compounds with ozone, 9:29231 (J;US)
Removal
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
Solvent Extraction
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)
HYDROGEN TRANSFER
Chemical Reaction Kinetics
Use of the neutron diffraction - H/D exchange technique to determine the conformational dynamics of trypsin, 9:28928 (R;US)
HYDROGENATION
Catalysts
Low valent actinides as hydrogenation catalysts, 9:28041 (J;US)
Utilization of the hydrogen-microautoclave in support of the coal liquefaction process, topical report No. 9. Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama, 9:27761 (R;US)
Parametric Analysis
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Pilot Plants
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Recommendations
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Residues
Utilization of the hydrogen-microautoclave in support of the coal liquefaction process, topical report No. 9. Wilsonville advanced coal liquefaction research and development facility, Wilsonville, Alabama, 9:27761 (R;US)
HYDROGEN-BASED ECONOMY
Economics of hydrogen production: the next twenty-five years, 9:28543 (R;US)
HYDROTHERMAL CONVECTIVE SYSTEMS
See HYDROTHERMAL SYSTEMS
HYDROTHERMAL SYSTEMS
Chemistry
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
HYDROXYL RADICALS
Chemical Reaction Kinetics
Mechanism of the oxidation of dopamine by the hydroxyl radical in aqueous solution, 9:28964 (J;US)
Chemical Reactions
Use of pulse radiolysis to measure high temperature kinetics, 9:28962 (R;US)
Electronic Structure
Molecular properties from MCSCF-SCEP wave functions. II. Calculation of electronic transition moments, 9:29575 (J;US)
Energy-Level Transitions
Molecular properties from MCSCF-SCEP wave functions. II. Calculation of electronic transition moments, 9:29575 (J;US)
Nuclear Magnetic Resonance
Nuclear magnetic resonance investigation of fluorinated oxide catalysts, 9:28963 (J;US)
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
Gamma Spectroscopy
On-line system for gamma-spectroscopic investigations of nuclei and gypernuclei in a bremsstrahlung beam by the (meson-γ) coincidence method, 9:29129 (RA;SU;In Russian)
HYPERON REACTIONS
Experiment Planning
Nuclear and particle physics aspects of hyperon and antinucleon interactions, 9:29583 (R;US)

I

IAEA
Research Programs
IAEA efforts to improve nuclear power plant operational safety, 9:28530 (J;XA)
IAEA SAFEGUARDS
Security Seals
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)
ICE
Isotope Ratio
500-year isotope record in James Ross: Island snow (Antarctic peninsula), 9:29515 (R;FR;In French; English)
Temperature records in Antarctica over the last century as deduced from isotopic data, 9:29517 (R;FR;In French and English)
Mechanical Properties
Strength of ice, 9:29543 (J;US)
ICR HEATING
ICRF heating in the Tandem Mirror Experiment-Upgrade (TMX-U), 9:29957 (R;US)

R Codes
Ray tracing of ion cyclotron waves in tokamak plasmas, 9:29946 (R;DE)
IDAHO
See also RAFT RIVER VALLEY
Geology
Thermal ground water flow systems in the thrust zone in southeastern Idaho, 9:28194 (R;US)
Hydrology
Thermal ground water flow systems in the thrust zone in southeastern Idaho, 9:28194 (R;US)
Hydrothermal Systems
Water geochemistry of hydrothermal systems, Wood River District, Idaho, 9:28210 (R;US)
IDAHO CHEMICAL PROCESSING PLANT
Chemical Effluents
ICPP effluent monitoring report, 4th quarter CY-1983, 9:29248 (R;US)
Mechanical Filters
ICPP BIF filter room: decontamination and decommissioning plan, 9:27961 (R;US)
Radioactive Effluents
ICPP effluent monitoring report, 4th quarter CY-1983, 9:29248 (R;US)
IGNEOUS ROCKS
Comparative Evaluations
Evaluation of crystalline rock as a medium for isolation of high-level waste, 9:27962 (J;US)
ILLINOIS
Energy Source Development
Current alternative energy research and development in Illinois, 9:28518 (R;US)
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
IMAGE PROCESSING
Algorithms
Iterative three-dimensional image reconstruction from tomographic projections, 9:30091 (J;US)
Automation
Chest x-ray analysis by computer: final technical report, 9:29395 (R;US)
Study to determine the feasibility of computer diagnosis of the pneumoconioses. Final report, 9:29393 (R;US)
Iterative Methods
Iterative three-dimensional image reconstruction from tomographic projections, 9:30091 (J;US)
IMINOUREA
See GUANIDINES
IMPACT TESTS
Computerized Simulation
Evaluation of computer programs used for structural analyses of impact response of spent fuel shipping casks, 9:28986 (R;US)
IMPERMEABLE DRY ROCK
See HOT-DRY-ROCK SYSTEMS
IMPURITIES
Unwanted constituents, not for TRACE AMOUNTS, INTERFERING ELEMENTS, or metal and nonmetal additions.
Removal
Method of enhancing selective isotope desorption from metals, 9:30046 (P;US)
IN CORE INSTRUMENTS
See also specific instruments plus FUEL ASSEMBLIES or REACTOR CORES.
Design
Computerized automatic tip scanning operation, 9:28369 (J;US)
Fission Chambers
Position-sensitive fission counter for in-core flux profile monitoring, 9:28376 (J;US)
Neutron Monitors
Development of an extended range start-up monitor (ERSM) for boiling water reactions, 9:28368 (J;US)
Operation
Computerized automatic tip scanning operation, 9:28369 (J;US)
Position Sensitive Detectors
Position-sensitive fission counter for in-core flux profile monitoring, 9:28376 (J;US)
Thermometers
Testing of a prototype PWR design gamma thermometer for use as a local power monitor in the thimble tube of a nuclear reactor, 9:28374 (J;US)
INCINERATION
See COMBUSTION
INCINERATORS
Heat Recovery
Long-term evaluation heat recovery incinerator system - Jacksonville - December 1982 - May 1983. Final report Dec 82-May 83, 9:28693 (R;US)
Licensing
Licensing requirements for backfit incinerators at commercial nuclear power plants, 9:27940 (R;US)
Retrofitting
Licensing requirements for backfit incinerators at commercial nuclear power plants, 9:27940 (R;US)
INCOLOY 800
Corrosion
Corrosion of 316SS and IN800 in molten $NaNO_3$ - KNO_3, 9:28800 (J;US)
INCOLOY 800H
Creep
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
Fatigue
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
INCONEL 600
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)
Corrosion Products
Corrosion-product release in light water reactors, 9:28282 (R;US)
INCONEL 617
Creep
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
Fatigue
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
INCONEL 625
Physical Radiation Effects
Fast neutron irradiation of alloys with a higher nickel content than SS 316, 9:28725 (R;FR;In French)
INCONEL 690
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)
INCONEL 706
Physical Radiation Effects
Fast neutron irradiation of alloys with a higher nickel content than SS 316, 9:28725 (R;FR;In French)
INCONEL 718
Corrosion Fatigue
Corrosion fatigue of high strength fastener materials in seawater. Final report, 9:28239 (R;US)
INDIAN POINT-3 REACTOR
Containment
Reliability assessment of Indian Point Unit 3 containment structure, 9:28287 (R;US)
INDIAN RESERVATIONS
Solar Energy
Shandiin/DOE intertribal energy programs: technology transfer series, 9:28064 (R;US)

INDIANA
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
INDIUM
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
INDIUM COMPOUNDS
See also INDIUM PHOSPHIDES
Stimulated Emission
Room-temperature cw operation of InGaAsP/InGaP lasers at 727 nm grown on GaAs substrates by liquid phase epitaxy, 9:29006 (J;US)
INDIUM PHOSPHIDES
Photosensitivity
Pulsed soft x-ray response of InP:Fe photoconductors, 9:28842 (J;US)
Physical Radiation Effects
Gamma radiation effect on n-InP crystals with impurity clusters, 9:28833 (RA;UA;In Russian)
Semiconductor Junctions
Studies of metal-InP interfaces, 9:28830 (RA;IL)
INDOOR AIR POLLUTION
Health Hazards
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
Research Programs
Indoor-air-quality research. Hearings before the Subcommittee on Energy Development and Applications and the Subcommittee on Natural Resources, Agriculture Research and Environment, US House of Representatives, Ninety-Eighth Congress, first session, August 2, 3, 1983, 9:29229 (B;US)
INDUSTRIAL PLANTS

Cogeneration
Simple economics of industrial cogeneration, 9:28687 (J;US)
Energy Conservation
Process energy conservation manual, 9:28688 (B;US)
Trends in the conservation of energy in the United States, 1965-1980, 9:28662 (J;US)
Energy Substitution
Industrial energy substitution: econometric analysis of US data, 1958 to 1974. Final report, 9:28502 (R;US)
Radiation Accidents
Ruptured cesium-137 well-logging source at Shelwell Services, Inc., Hebron, Ohio, 9:29436 (R;US)
Solar Process Heat
Modeling of the DOE-sponsored IPH field-test experiments, 9:28176 (R;US)
Waste Heat Utilization
Characterization of industrial process waste heat and input heat streams, 9:28685 (R;US)
Determination of thermal-degradation rates of some candidate Rankine-cycle organic working fluids for conversion of industrial waste heat into power, 9:28670 (R;US)
Measures to encourage waste heat utilization in German industry., 9:28668 (R;DE;In German)
INERTIAL CONFINEMENT
A dynamic plasma confinement by inertial forces.
Forecasting
Inertial confinement fusion. Technical forecast handbook, 9:29998 (R;US)
Heavy Ion Reactions
Heavy ion inertial fusion - an overview, 9:30015 (R;GB)
Ion Beam Targets
Current status of calculations and measurements of ion stopping power in ICF plasmas, 9:30035 (J;FR)
Nuclear Engineering
Inertial fusion and energy production, 9:30052 (J;US)
Reviews
Inertial fusion and energy production, 9:30052 (J;US)
Technology Assessment
General principles of inertial confinement, 9:30049 (BA;US)
Inertial confinement fusion. Technical forecast handbook, 9:29998 (R;US)
INFORMATION DISSEMINATION
Economic Impact
Impact of international cooperation in DOE's magnetic confinement fusion program, 9:28523 (R;US)
Government Policies
Department of Energy's activities to limit distribution of certain unclassified scientific and technical information, 9:30093 (R;US)
INFORMATION SYSTEMS
Fundamental understanding of matter: An engineering viewpoint, 9:30095 (J;US)
Administrative Procedures
Energy Information Administration needs to strenghten its computer systems development procedures, 9:28490 (R;US)
Standards
Energy Information Administration needs to strenghten its computer systems development procedures, 9:28490 (R;US)
INFRARED SPECTROMETERS
New approaches to photothermal spectroscopy, 9:28875 (R;US)
Equipment Interfaces
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)
Optical Systems
Long path length temperature-controlled absorption cell for spectroscopic studies of radioactive compounds, 9:28883 (J;US)

INHOMOGENEOUS PLASMA
Fourier Analysis
Uniform integral representation for geometric optics solutions near caustics, 9:29069 (RA;IL)
INPUT-OUTPUT ANALYSIS
Energy Models
Energy disaggregated input-output model. Model applications guide, 9:28492 (R;US)
IN-SITU COMBUSTION
Waste Water
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
IN-SITU GASIFICATION
Borehole Linking
Cornering water jet drill for creating horizontal holes in coal seams, 9:28988 (R;US)
Chemical Reaction Kinetics
Gasification of black coal with air-steam mixtures in fixed bed under pressure with a view to underground gasification, 9:27774 (R;DE;In German)
Field Tests
High-angle drilling for the Centralia Partial-Seam Crip Test, 9:27779 (R;US)
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)
Simulation
Gasification of black coal with air-steam mixtures in fixed bed under pressure with a view to underground gasification, 9:27774 (R;DE;In German)
INSOLATION
Data
Solar Radiation Data Directory. A guide to solar radiation and meteorological data collection activities in the United States, 9:28061 (R;US)
INSPECTION
Meetings
Examination of fuel assembly for water cooled power reactors, 9:28264 (R;AT)
Optimization
Optimal allocation of inspection resources, 9:27995 (R;US)

IODINE 133
Energy Levels
Gamma-ray cascade population of the $(19/2)^-$ isomer in the decay of ^{133}Te/sup m/ to levels of ^{133}I, 9:29782 (J;US)
IODINE COMPOUNDS
See also IODIDES
Chemical Reactions
Absence of $I(^2P_1/sub\ //_2)$ as a product of the reactions of F atoms with HI, I_2, and ICN, 9:28920 (J;US)
IODINE IODIDES
See IODINE
ION BEAM TARGETS
Gain
Heavy ion inertial fusion: interface between target gain, accelerator phase space and reactor beam transport revisited, 9:30029 (R;US)
Stopping Power
Current status of calculations and measurements of ion stopping power in ICF plasmas, 9:30022 (R;US)
ION BEAMS
See also ARGON 40 BEAMS
HELIUM 4 BEAMS
HYDROGEN 1 MINUS BEAMS
Beam Optics
Uniform integral representation for geometric optics solutions near caustics, 9:29069 (RA;IL)
ION COLLISIONS
See also ELECTRON-ION COLLISIONS
ION-ATOM COLLISIONS
Electron Capture
Recent atomic physics experiments at the Bevalac, 9:29569 (RA;US)
ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING
ION EXCHANGE MATERIALS
Regeneration
Sulfate removal by anion exchange against bicarbonate ions, 9:29298 (R;DE;In German)
ION EXCHANGE MEMBRANES
See ION EXCHANGE MATERIALS
MEMBRANES
ION SOURCES
See also PENNING ION SOURCES
Meetings
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
Research Programs
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
Specifications
Cold cathode gaseous ion source for pure vacuum systems, 9:30000 (RA;UA;In Russian)
ION-ATOM COLLISIONS
Meetings
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
Research Programs
Overview of the symposium: status and direction of current research with highly charged ions, 9:29578 (J;SE)
IONIC REACTIONS
See CHEMICAL REACTIONS
IONS
IONIZATION CALORIMETERS
See SHOWER COUNTERS
IONIZATION CHAMBERS
See also FISSION CHAMBERS
LIQUID IONIZATION CHAMBERS
Calibration
Measurements of radiation quality factors using a recombination chamber, 9:29125 (R;US)
Kerma
Spectrum-averaged kerma factors for reactor dosimetry with paired ion chambers. Technical report, 9:29116 (R;US)
IONIZING RADIATIONS
See also GAMMA RADIATION
X RADIATION
Radiation Quality
Measurements of radiation quality factors using a recombination chamber, 9:29125 (R;US)
IONOSPHERE
Drift Instability
Pedersen density drift instabilities, 9:29550 (J;US)
Electric Potential
Numerical modeling of ionospheric parameters from global IMS (International Magnetospheric Study) magnetometer data for the CDAW-6 intervals, 9:29525 (R;US)
Magnetic Storms
Numerical modeling of ionospheric parameters from global IMS (International Magnetospheric Study) magnetometer data for the CDAW-6 intervals, 9:29525 (R;US)
IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also ARGON IONS
COBALT IONS
GOLD IONS
HEAVY IONS
IRON IONS

NEON IONS
URANIUM IONS
Energy-Level Transitions
Energy-level scheme and transition probabilities of Si-like ions, 9:29925 (R;US)
Wave Functions
Energy-level scheme and transition probabilities of Si-like ions, 9:29925 (R;US)
IRIDIUM 191
Radioisotope Generators
Development of the Osmium-191->Iridium-191m radionuclide generator. Annual report, 9:29381 (R;US)
IRON
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Catalytic Effects
Evidence for two chain growth probabilities on iron catalysts in the Fischer-Tropsch synthesis, 9:28039 (J;US)
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Multipole Transitions
M agnetic transitions in ultra-thin iron layers, 9:28781 (RA;IL)
Neutron Diffraction
Dynamics of itinerant ferromagnets above T/sub c/, 9:28724 (R;US)
Paramagnetism
Dynamics of itinerant ferromagnets above T/sub c/, 9:28724 (R;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
IRON 56 REACTIONS
Fragmentation
Charge-changing reactions of secondary fragments produced in high-energy heavy-ion collisions, 9:29738 (J;US)
Heavy Ion Reactions
Evidence for the non-existence of anomalous projectile fragments with Z* = 1.33, 1.67, 2.33 and 2.67, 9:29780 (RA;US)
Fractional charge search at the Bevalac, 9:29794 (RA;US)
Spallation
About a possible energy dependence of the anomalon effect at charge two, 9:29730 (RA;US)
Behavior of secondary particles of charge two, three and four produced from relativistic heavy-ion collisions, 9:29728 (RA;US)
First results from a repeat experiment on the mean free path of projectile fragments from 1.88 A GeV ^{56}Fe - emulsion interactions, 9:29724 (RA;US)
Search for short-lived anomalons in projectile fragmentation, 9:29761 (RA;US)
Search for topological correlations in the interactions of relativistic projectile fragments from relativistic heavy ion collisions, 9:29731 (RA;US)
IRON 56 TARGET
Lepton Reactions
Nuclear effects in deep inelastic scattering, 9:29807 (RA;DE)
Neutron Reactions
To the problem of determination of an integral cross section of γ quantum yield at nucleus de-excitation, 9:29750 (RA;SU;In Russian)
IRON 59
Radionuclide Migration
Radionuclide fate and effects, 9:29275 (RA;US)
IRON ALLOYS
See also INCONEL 600
INCONEL 625
INCONEL 706
IRON BASE ALLOYS
NIMONIC PE16
STELLITE 6
Catalytic Effects
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Displacement Rates
dpa calculations for neutron irradiated amorphous $Fe_{40}Ni_{40}B_{20}$ ribbons, 9:28768 (R;DE;In German)
Permeability
Environment and fracture ($Fe_{40}Ni_{40}P_{14}B_6$), 9:28763 (R;US)
IRON BASE ALLOYS
See also STEELS
Corrosion
Perspective of the corrosive behavior of lithium and sodium, 9:28735 (R;US)
Decomposition
Small-angle neutron scattering study of the decomposition of Fe-28Cr-10.5Co, 9:28743 (R;US)
Microstructure
Atom probe: a direct technique for kinetic measurements (Fe-24Cr; Fe-32Cr; Fe-28.5Cr-10.6Co), 9:28744 (R;US)
Phase Transformations
Atom probe: a direct technique for kinetic measurements (Fe-24Cr; Fe-32Cr; Fe-28.5Cr-10.6Co), 9:28744 (R;US)
Voids
Model describing the compositional dependence of void nucleation in irradiated Fe-Ni-Cr alloys, 9:28771 (R;US)
IRON COMPOUNDS
Chemical Reactions
Studies of the reactions of group 8 transition-metal ions Fe^+, Co^+, and Ni^+ with linear alkanes. Determination of reaction mechanisms and MC/sub n/H/sub 2n/$^+$ ion structures using Fourier transform mass spectrometry collision-induced dissociation, 9:28924 (J;US)
IRON IONS
Reduction
Metallic cobalt and iron particles in large and medium pore zeolites. Methods of generation and ferromagnetic resonance characterization, 9:28899 (R;US)
ISING MODEL
Scale Dimension
Confluent corrections in exactly solved models, 9:29879 (RA;IL)
ISIS REACTOR
Specifications
Saclay ISIS reactor and its applications, 9:28386 (R;FR)
Uses
Saclay ISIS reactor and its applications, 9:28386 (R;FR)
ISOTOPE APPLICATIONS
60 years of the Institute for Research, Production and Application of Radioisotopes 1919-1979, 9:28864 (R;SU;RU)
ISOTOPE EXCHANGE
See ISOTOPIC EXCHANGE
ISOTOPIC EXCHANGE
Chemical Reaction Kinetics
Use of the neutron diffraction - H/D exchange technique to determine the conformational dynamics of trypsin, 9:28928 (R;US)
ISOTOPIC SUBSTITUTION
See ISOTOPIC EXCHANGE

Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs (List of organizations involved and, in some cases, processing flowsheets), 9:27829 (R;US)

Boilers
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization (By country, number, capacity (MWe) and age, utilities and industrial design), 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary (Number and total MWe of boilers less than 20 years old by country cooperating), 9:27827 (R;US)
Harbors
Western US steam coal exports to the Pacific Basin: port and marine task group, 9:27823 (R;US)
Research Programs
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
JET DRILLS
Performance Testing
Cornering water jet drill for creating horizontal holes in coal seams, 9:28988 (R;US)
JET ENGINE FUELS
Chemical Analysis
Aviation fuels, 1983, 9:27872 (R;US)
JET REACTORS
Reactor Fueling
Centrifuge pellet injector for JET, 9:30003 (R;DE)
Pneumatic pellet injector for JET, 9:30004 (R;DE)
JETS
Heat Transfer
Experimental study of evaporation from round turbulent water jets, 9:28138 (R;US)
Mass Transfer
Mass transfer in round turbulent water jets, 9:28139 (R;US)
JOB TRAINING
See TRAINING

K

KALKAR POWER REACTOR
See SNR-1 REACTOR
KALUZA-KLEIN THEORY
Symmetry
Symmetry aspects of Kaluza-Klein theories, 9:29892 (R;IT)
KANGAROO RAT
See RODENTS
KANSAS
Research Reactors
Safety Evaluation Report related to the renewal of the operating license for the research reactor at the University of Kansas (Docket No. 50-148), 9:28434 (R;US)
KAONS PLUS
Particle Production
Inclusive K^+-production in the model of transport theory for high-energy nucleus-nucleus collisions, 9:29743 (RA;US)
KARLSRUHE NUCLEAR RESEARCH CENTER
See KERNFORSCHUNGSZENTRUM KARLSRUHE
KENTUCKY
Coal Deposits
Petrographic characterization of Kentucky coals. Final report. Part V. Pyrite size/form/microlithotype distribution in western Kentucky prepared coals and in channel samples from western Kentucky and western Pennsylvania, 9:27783 (R;US)
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
Wetlands
Atlas of wetlands in the principal coal surface mining region of western Kentucky. Reference report, 9:27807 (R;US)
KERNFORSCHUNGSZENTRUM KARLSRUHE
Radioactive Aerosols
Summary report on research and development work carried out in 1982, 9:28423 (R;DE;In German)
Reactor Safety
Nuclear Safety Project, 9:28422 (R;DE;In German and English.)
KEVLAR
See ARAMIDS
KINETIC EQUATIONS
For reactor kinetics use REACTOR KINETICS EQUATIONS.
Analytical Solution
Analytical solutions of model equations for two phase gas mixtures: transverse velocity perturbations, 9:29580 (J;US)
KLEIN-GORDON EQUATION
Numerical Solution
New exact solutions for inhomogeneous universes, 9:29536 (RA;IL)
KLYSTRONS
Control Systems
Programmed instrument for automatic control of training of klystron pulse amplifiers, 9:29047 (RA;SU;In Russian)
Performance
High power rf klystrons for linear accelerators, 9:29109 (R;US)
KNK-2 REACTOR
Reactor Lattice Parameters
KNK-II reactor: Reload experiments in SNEAK-11 reactor, 9:28341 (RA;DE;In German)
Reactor Physics
KNK-II reactor: Reload experiments in SNEAK-11 reactor, 9:28341 (RA;DE;In German)
Several neutron-physical aspects of modified KNK-II assemblies, 9:28340 (RA;DE;In German)
KNOCK-ON ELECTRONS
See ELECTRONS
KOPPERS-TOTZEK PROCESS
Comparative Evaluations
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)
KOREA (SOUTH)
See REPUBLIC OF KOREA
KRYPTON
Auger Effect
Calculation of probability of Auger KLL transitions in krypton for j-j coupling, 9:29567 (RA;SU;In Russian)
Photon-Atom Collisions
Resonance ionization spectroscopy of argon, krypton, and xenon using vacuum ultraviolet light, 9:29558 (R;US)
KRYPTON 76
Radiochemistry
Reactions with aromatic compounds of recoiling bromine atoms formed from the /sup 76,77/Kr → /sup 76,77/Br transformations. Liquid-phase reactions, 9:28968 (J;US)
KRYPTON 77
Radiochemistry
Reactions with aromatic compounds of recoiling bromine atoms formed from the /sup 76,77/Kr → /sup 76,77/Br transformations. Liquid-phase reactions, 9:28968 (J;US)
KRYPTON 85
Radioecological Concentration
Comparison of observed and predicted Kr-85 air concentrations, 9:29234 (R;US)
KRYPTON 86
Energy Levels
Obtaining of the high energy-resolution spectra of heavy-ion on a QQDQ magnetic spectrometer, 9:29796 (J;CN;CH)
KRYPTON 86 REACTIONS
Heavy Ion Reactions
Obtaining of the high energy-resolution spectra of heavy-ion on a QQDQ magnetic spectrometer, 9:29796 (J;CN;CH)

L

LAKE MICHIGAN
Water Quality
Ten-year forecasts of water quality in Lake Michigan using a deterministic eutrophication model, 9:29294 (R;US)

LAMINOGRAPHY

LEACHATES
Chemical Composition
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)
LEAD
Carbon 12 Reactions
Particle-gamma coincidence measurements in $^{12}C + ^{12}C$ and ^{12}C + Pb collisions at 2.1 GeV/A incident energy, first results - γ-ray spectrum, 9:29732 (RA;US)
Search for unstable superdense nuclei at the Dubna synchrophasotron, 9:29795 (RA;US)
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Films
Ultra-thin continuous Pb filns by coevaporation with Ge, 9:28783 (RA;IL)
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Iron 56 Reactions
Fractional charge search at the Bevalac, 9:29794 (RA;US)
Materials Recovery
Non-polluting disposal of spent primary batteries, 9:28675 (R;DE;In German)
Neon 20 Reactions
Neutron emission from collisions of 390 MeV/u neon ions on lead, 9:29792 (RA;US)
Photonuclear Reactions
Determination of the total photonuclear absorption cross section for Pb in the Δ-resonance region, 9:29788 (R;FR)
Pion Plus Reactions
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Trace Amounts
Marine sciences, 9:29290 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
LEAD 208 TARGET
Krypton 86 Reactions
Obtaining of the high energy-resolution spectra of heavy-ion on a QQDQ magnetic spectrometer, 9:29796 (J;CN;CH)
Nuclear Radii
Proton elastic scattering on complex nuclei, 9:29751 (RA;SU;In Russian)
Proton Reactions
Proton elastic scattering on complex nuclei, 9:29751 (RA;SU;In Russian)
LEAD-ACID BATTERIES
Field Tests
Battery test results on Gould GC2-EV200, 9:28486 (R;US)
Load Analysis
Testing, data analysis and engineering services on lead-acid load leveling batteries, 9:28485 (R;US)
Recharge
Etude de la recharge de l'accumulateur plomb-acide red camel entre +20 c et -30 c (a study of the rechargeability of the red camel lead-acid battery between +20 c and -30 c). Technical note, 9:28475 (R;US)
Safety
Safety information profile: ali (starting, lighting, ignition) battery assembly, 9:28481 (R;US)
Testing
Testing, data analysis and engineering services on lead-acid load leveling batteries, 9:28485 (R;US)
LEAVES
Injuries
Flooding and SO_2 stress interaction in Betula papyrifera and B. nigra seedlings, 9:29503 (J;US)
Leaching
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
LED

Final environmental statement related to the operation of Limerick Generating Station, Units 1 and 2 (Docket Nos. 50-352 and 50-353), 9:28382 (R;US)
LIMERICK-2 REACTOR
Environmental Impact Statements
Final environmental statement related to the operation of Limerick Generating Station, Units 1 and 2 (Docket Nos. 50-352 and 50-353), 9:28382 (R;US)
LIMESTONE
Comparative Evaluations
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Final report, 9:27719 (R;US)
LIMING
Environmental Impacts
Liming of acidified waters: issues and research - a report of the international liming workshop, 9:29296 (R;US)
Meetings
Liming of acidified waters: issues and research - a report of the international liming workshop, 9:29296 (R;US)
Optimization
Liming of acidified waters: issues and research - a report of the international liming workshop, 9:29296 (R;US)
LIMITERS
Helical Configuration
Resonant helical magnetic limiter, 9:30006 (R;DE)
Plasma Drift
Plasma diffusion in an ergotic magnetic limiter, 9:29930 (R;US)
LIMITING FRAGMENTATION
Structure Functions
Quark-parton structure functions of nuclei, 9:29823 (R;XJ)
LINACS
See LINEAR ACCELERATORS
LINEAR ACCELERATORS
See also FMIT LINAC
QUADRUPOLE LINACS
STANFORD 20-GEV LINAC
STANFORD LINEAR COLLIDER
Beam Splitting
Investigation of a superconducting beam splitter for atlas, 9:29094 (R;US)
Neutron Sources
High-current, low-energy synchrotrons and compressor rings, 9:28001 (R;US)
Reviews
Elementary principles of linear accelerators, 9:29065 (R;US)
New directions in linear accelerators, 9:29063 (R;US)
Superconducting Cavity Resonators
Status report on the ATLAS superconducting linear accelerator, 9:29093 (R;US)
LINEAR ENERGY TRANSFER
See LET
LINEAR PINCH DEVICES
Neutron Spectra
Influence of the deviation from the equilibrium deuteron distribution on the neutron spectra in linear pinch geometries, 9:29935 (R;DE)
LINERS
Implosions
Development of imploding liner systems for the NRL LINUS Program, 9:30048 (BA;US)
Materials Testing
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
Mechanical Properties
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
Physical Properties
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
LINUS REACTORS
Liners
Development of imploding liner systems for the NRL LINUS Program, 9:30048 (BA;US)
LIPASE
Code number 3.1.1.3.
Chemical Activation
Lipoprotein lipase: isolation and characterization of a second enzyme species from postheparin plasma (Rats), 9:29353 (J;US)
Chemical Composition
Lipoprotein lipase: isolation and characterization of a second enzyme species from postheparin plasma (Rats), 9:29353 (J;US)
LIPASES
See LIPASE
LIPIDS
See also LIPOPROTEINS
Biosynthesis
Screening for lipid yielding microalgae: activities for 1983. Final subcontract report, 9:28083 (R;US)
Selection of oil-producing desert microalgae, 9:28084 (RA;US)

Spin-Lattice Relaxation
Proton spin-lattice relaxation in natural biological membranes systems, 9:28939 (RA;PL;In Polish)
LIPOPROTEINS
Enzyme Activity
Lipoprotein lipase: isolation and characterization of a second enzyme species from postheparin plasma (Rats), 9:29353 (J;US)
LIPS
See ORAL CAVITY
LIQUID ASPHALT
See PETROLEUM RESIDUES
LIQUID COLUMN CHROMATOGRAPHY
Equipment Interfaces
On-line multidimensional liquid chromatographic determination of polynuclear aromatic hydrocarbons in complex samples, 9:28894 (J;US)
LIQUID EFFLUENTS
See LIQUID WASTES
LIQUID IONIZATION CHAMBERS
Working Fluids
Liquid ionization chamber using tetramethylsilane, 9:29132 (R;DE;In German)
LIQUID METAL TEST FACILITIES
See TEST FACILITIES
LIQUID PHASE METHANOL PROCESS
Bench-Scale Experiments
Liquid-phase methanol PDU-project status and plan, 9:28042 (RA;US)
Catalysts
Liquid-phase methanol PDU-project status and plan, 9:28042 (RA;US)
Feasibility Studies
Liquid-phase methanol PDU-project status and plan, 9:28042 (RA;US)
Process Development Units
Liquid-phase methanol PDU-project status and plan, 9:28042 (RA;US)
LIQUID WASTES
See also WASTE WATER
Ground Disposal
Surface impoundment assessment national report, 9:29295 (R;US)
LIQUIDS
See also COAL LIQUIDS
Spin-Lattice Relaxation
Quasi-stationary measuring method of selective times of spin-lattice relaxation in liquids, 9:28907 (RA;PL;In Polish)
LITHIUM
Atom-Molecule Collisions
Application of fitting laws to rotationally inelastic rate constants: Li_2, 9:29574 (J;US)
Corrosive Effects
Compatibility of refractory alloys with space reactor system coolants and working fluids, 9:28325 (RA;US)
Perspective of the corrosive behavior of lithium and sodium, 9:28735 (R;US)
Proton Reactions
Users guide to the Li/Cu activation diagnostic, 9:29074 (R;US)
LITHIUM 6
Energy Levels
Upper limit on the isovector parity-violating decay width of the 0^+ T = 1 state of ^{6}Li, 9:29712 (J;US)
LITHIUM 6 REACTIONS
Alpha-Transfer Reactions
Alpha transfer to ^{18}N and ^{16}O, 9:29717 (RA;IL)
Phenomenological parametrization of a reduced width function in alpha-transfer reactions, 9:29719 (RA;SU;In Russian)
LITHIUM 6 TARGET
Deuteron Reactions
Contribution of virtual excitations in diffraction scattering of protons and deuterons on ^{6}Li nucleus, 9:29720 (RA;SU;In Russian)
Proton Reactions
Contribution of virtual excitations in diffraction scattering of protons and deuterons on ^{6}Li nucleus, 9:29720 (RA;SU;In Russian)
Microscopic description of (p,n) reactions on 1p shell nuclei, 9:29718 (RA;SU;In Russian)
LITHIUM 7 TARGET
Proton Reactions
Microscopic description of (p,n) reactions on 1p shell nuclei, 9:29718 (RA;SU;In Russian)
LITHIUM HYDRIDES
Catalytic Effects
Low valent actinides as hydrogenation catalysts, 9:28041 (J;US)
Chemical Reactions
Low valent actinides as hydrogenation catalysts, 9:28041 (J;US)
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
LIVER
Dynamic Function Studies
Nuclear-medical method applied for determining the choledochus diameter after cholecystectomy, 9:29388 (R;DE;In German)
Radionuclide Kinetics
Plutonium partitioning among internal organs, 9:29454 (J;GB)
LIVESTOCK
See DOMESTIC ANIMALS
LIZARDS
Energy Budgets
Field energetics and foraging mode of Kalahari lacertid lizards, 9:29257 (J;US)
Feeding
Field energetics and foraging mode of Kalahari lacertid lizards, 9:29257 (J;US)
Metabolism
Field energetics and foraging mode of Kalahari lacertid lizards, 9:29257 (J;US)
LMFBR TYPE REACTORS
See also SNR-1 REACTOR
SNR-2 REACTOR
SUPER PHENIX REACTOR
Containment Buildings
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Flow Blockage
CAMEL II 37-pin/7-pin intra-pin fuel injection test, 9:28402 (R;US)
Fluid-Structure Interactions
Seismic fluid-structure interaction analysis of a large LMFBR reactor, 9:28299 (R;US)
Fuel Assemblies
CAT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28298 (R;US)
MENT reconstruction and potting comparison of a LMFBR fuel bundle, 9:28297 (R;US)
Fuel Cans
Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Fuel Element Failure
Fuel rod failure experiments - VOLGA programme, 9:28318 (RA;DE;In German)
Fuel Pellets
Characteristics of mixed oxide fuel pellets and the respective source products, 9:28308 (RA;DE;In German)
Fuel and fuel rod irradiation from an international angle, 9:28316 (RA;DE;In German)
Fuel Pins
Extended overpower transient testing of oxide pins in EBR-II, 9:28396 (R;US)
FRAS3 analysis of transient fission-gas behavior in PNL-10 fuel, 9:28397 (R;US)

Fuel behaviour and fuel pin failure probability, 9:28311 (RA;DE;In German)
Fuel production comparison of different types, 9:28307 (RA;DE;In German)
Heat-transfer calculations for a potted (solid matrix embedded) subassembly, 9:28296 (R;US)
Steady-state irradiation experiments, 9:28315 (RA;DE;In German)
Mixed Oxide Fuels
Assays on homogeneity of the mixed oxide at various stages of the fuel cycle, 9:28309 (RA;DE;In German)
Characteristics of mixed oxide fuel pellets and the respective source products, 9:28308 (RA;DE;In German)
Experience with oxide fuel for advanced reactors, 9:28303 (R;US)
Fuel and fuel rod irradiation from an international angle, 9:28316 (RA;DE;In German)
Fuel production comparison of different types, 9:28307 (RA;DE;In German)
Pipes
Damping in LMFBR pipe systems, 9:28302 (R;US)
Slideline verification for multilayer pressure vessel and piping analysis including tangential motion, 9:28319 (R;US)
Radioactive Aerosols
Summary report on research and development work carried out in 1982, 9:28423 (R;DE;In German)
Reactivity Coefficients
Reactivity worths of accident configurations, 9:28342 (RA;DE;In German)
Reactor Accidents
Aerosol release and transport program. Quarterly progress report, July-September 1983, 9:28440 (R;US)
Dynamic structural analysis of a head assembly for a large loop-type LMFBR, 9:28403 (R;US)
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Reactor Control Systems
Methodology for validation of safety parameters and fault detection and isolation, 9:28362 (R;US)
Reactor Core Disruption
Analysis of thermal propagation during a hypothetical core disruptive accident in a LMFBR reactor, 9:28424 (R;DE;In German)
Post-accident heat removal research: A state of the art review, 9:28427 (R;DE)
Reactor Kinetics
Reactivity worths of accident configurations, 9:28342 (RA;DE;In German)
Reactor Materials
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Reactor Vessels
Dynamic structural analysis of a head assembly for a large loop-type LMFBR, 9:28403 (R;US)
Slideline verification for multilayer pressure vessel and piping analysis including tangential motion, 9:28319 (R;US)
Scram
Reactor shutdown system unavailability improvement by using a system of continuous data validation, 9:28361 (R;US)
Seismic Effects
Seismic fluid-structure interaction analysis of a large LMFBR reactor, 9:28299 (R;US)
Steam Generators
Mitigation of thermal transients by tube bundle inlet plenum design, 9:28400 (R;US)
Transient Overpower Accidents
CAMEL II 37-pin/7-pin intra-pin fuel injection test, 9:28402 (R;US)
Extended overpower transient testing of oxide pins in EBR-II, 9:28396 (R;US)
Simulated fuel melt movement and relocation in two seven-pin-bundle geometries (SIMBATH out-of-pile experiments Vsub(Th) 74; Vsub(Th) 79), 9:28426 (R;DE)
Transients
FRAS3 analysis of transient fission-gas behavior in PNL-10 fuel, 9:28397 (R;US)
Investigation of the physical and numerical foundations of two-fluid representation of sodium boiling with applications to LMFBR experiments, 9:28428 (R;US)
Mitigation of thermal transients by tube bundle inlet plenum design, 9:28400 (R;US)
LOBSTERS
Physiology
Chemosensitivity of walking legs of the lobster Homarus americanus: neurophysiological response spectrum and thresholds, 9:29415 (J;GB)
Narrow-spectrum chemoreceptor cells in the walking legs of the lobster Homarus americanus: taste specialists, 9:29414 (J;DE)
LOCA
See LOSS OF COOLANT
LOCAL GALAXY
See MILKY WAY
LOCAL GOVERNMENT
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
LOCKS (SECURITY)
See PHYSICAL PROTECTION DEVICES
LONGWALL MINING
Shearer Loaders
Longwall mining dust control. Technical progress report No. 26, September 1-30, 1983, 9:27812 (R;US)
LOSS OF COOLANT
Steam-water jet analysis. Final report, 9:28415 (R;US)
Computer Calculations
Verification of the MOXY code in WRAP for thermal analysis of fuel assemblies in a boiling water reactor during a loss-of-coolant accident, 9:28408 (R;US)
Fission Product Release
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Heat Transfer
COBRA/TRAC simulation of semiscale S-UT-5 test, 9:28448 (R;US)
Large break LOCA analyses for two-loop PWRS with upper-plenum injection, 9:28445 (R;US)
Hydraulics
COBRA/TRAC simulation of semiscale S-UT-5 test, 9:28448 (R;US)
Large break LOCA analyses for two-loop PWRS with upper-plenum injection, 9:28445 (R;US)
Hydrogen
Treatment of physical and numerical diffusion in fluid dynamic simulations. Final report, 9:28453 (R;US)
Hydrogen Production
Hydrogen behavior in light-water reactors, 9:28464 (J;US)
Meetings
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Temperature Gradients
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
LOUISIANA
Coastal Waters
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1982-November 1983. Volume I, 9:27867 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry site, May 1982-November 1983. Volume II, Appendices, 9:27868 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1983-November 1983. Volume III, Executive Summary, 9:27869 (R;US)

Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
Geopressured Systems
Sweet lake geopressured-geothermal project Magma Gulf-Technadril/DOE Amoco Fee. Annual report, December 1, 1979-February 27, 1981. Volume I. Drilling and completion test well and disposal well, 9:28211 (R;US)

LOW BTU GAS
150 to 250 Btu/ft³.
See also PRODUCER GAS
Economic Analysis
Commercial potential of wood gasification and its application in New York state. Final report, 9:28032 (R;US)
Fuel Substitution
Analysis of industrial applicability of low-Btu gas, 9:27781 (J;US)
Market
Analysis of industrial applicability of low-Btu gas, 9:27781 (J;US)

LOW DOSE IRRADIATION
Dosimetry
Combined hit theory-microdosimetric explanation of cellular radiobiological action, 9:29463 (BA;XA)
Radiobiology
Combined hit theory-microdosimetric explanation of cellular radiobiological action, 9:29463 (BA;XA)

LOW INCOME GROUPS
Financial Assistance
Disconnection of natural gas service to residential customers, 9:27878 (R;US)

LOW LEVEL COUNTING
Computerized Simulation
Computer simulation of time-of-event counting data for measurement of ultra low levels of radioactivity, 9:29245 (R;US)

LOWER HYBRID HEATING
Lower hybrid experiments at the 1 MW level on Alcator C: heating and current drive, 9:29924 (R;US)
Computerized Simulation
Realistic modelling of lower hybrid current drive with multiple codes, 9:29923 (R;US)
Two-Dimensional Calculations
Analytic solution of the 2-D Fokker-Planck equation for LH current drive, 9:29922 (R;US)

LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING

LOW-LEVEL RADIOACTIVE WASTES
Classification
Calculating the chemical hazard of radioactive waste, 9:27941 (R;US)
Hazards
Calculating the chemical hazard of radioactive waste, 9:27941 (R;US)
Marine Disposal
Report on the invertebrate megafauna sampled by trawling in the Atlantic 3800 meter low-level radioactive waste disposal site. Final report, 9:27972 (R;US)

LUCCU OIL
See OLIVE OIL

LUCITE
Argon 40 Reactions
Charge-changing reactions of secondary fragments produced in high-energy heavy-ion collisions, 9:29738 (J;US)
Iron 56 Reactions
Charge-changing reactions of secondary fragments produced in high-energy heavy-ion collisions, 9:29738 (J;US)

LUNGS
Radionuclide Kinetics
Comparison of early lung clearance of yellowcake aerosols in rats with in vitro dissolution and IR analysis, 9:29456 (J;GB)

LUTETIUM
Mass Spectra
Continuous wave lasers for resonance ionization mass spectrometry, 9:28889 (J;US)

LWBR TYPE REACTORS
Fuel Cans
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Reactor Materials
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)

LWR TYPE REACTORS
See WATER COOLED REACTORS

LYMPHOCYTES
Absorption Spectra
Circular dichroism microspectrophotometer, 9:29157 (J;US)
Dichroism
Circular dichroism microspectrophotometer, 9:29157 (J;US)
Fluorescence
Identification of mitogen responding lymphocytes by fluorescence polarization, 9:29359 (J;US)
Physiology
Identification of mitogen responding lymphocytes by fluorescence polarization, 9:29359 (J;US)
Polarization
Identification of mitogen responding lymphocytes by fluorescence polarization, 9:29359 (J;US)
Radiosensitivity
Mammalian cytogenetics, 9:29444 (RA;US)
Sister Chromatid Exchanges
Increase of sister chromatid exchanges and perturbations of cell division kinetics in human lymphocytes by benzene metabolites, 9:29511 (J;US)

LYMPHOID CELLS
See LYMPHOCYTES

LYSINE
Biosynthesis
Biosynthesis of streptothricin F. 5. Formation of β-lysine by Streptomyces L-1689-23, 9:29350 (J;US)

LYSOZYME
Code number 3.2.1.17.
Protein Denaturation
Proton spin-lattice relaxation in lysozyme solutions, 9:29325 (RA;PL;In Polish)
Spin-Lattice Relaxation
Proton spin-lattice relaxation in lysozyme solutions, 9:29325 (RA;PL;In Polish)

MACERALS
Comparative Evaluations
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)

MAGIC NUCLEI
Mass Formulae
Mass difference jump in magic nuclei in the wigner scheme of SU(4) symmetry, 9:29813 (RA;SU;In Russian)

MAGIC NUMBERS
See MAGIC NUCLEI

MAGMA SYSTEMS
Magnetotelluric Surveys
Detection of conductive bodies in a layered earth using the magnetotelluric method: application to silicic magma bodies, 9:28207 (R;US)

MAGNESIUM
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)

Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
Internal Friction
Internal friction of magnesium from 0.8K; effect of electron irradiation, 9:28732 (R;FR;In French)
Physical Radiation Effects
Internal friction of magnesium from 0.8K; effect of electron irradiation, 9:28732 (R;FR;In French)
MAGNESIUM 24 TARGET
Proton Reactions
Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis, 9:29739 (R;DE;In German)
MAGNESIUM 26 REACTIONS
Compound-Nucleus Reactions
γ-γ energy correlations and the moments of inertia in ^{176}W, 9:29786 (J;US)
MAGNESIUM 26 TARGET
Proton Reactions
Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis, 9:29739 (R;DE;In German)
MAGNESIUM COMPOUNDS
See also MAGNESIUM FLUORIDES
MAGNESIUM SULFATES
NMR Spectra
Investigations of the second moment of NMR spectra line in solid solutions of fluoroperovskites $NH_4Cosub(x)Mgsub(1-x)F_3$, 9:28912 (RA;PL;In Polish)
MAGNESIUM FLUORIDES
Relaxation
Spin dynamics near the magnetic percolation threshold, 9:28798 (J;US)
MAGNESIUM SULFATES
Corrosive Effects
Electrochemical investigations on the corrosion of gas turbine materials in sulfate melts with and without superimposed mechanical stress, 9:28773 (R;DE;In German)
MAGNET COILS
Design
Equilibrium modeling of the TFCX poloidal field coil system, 9:30011 (R;US)
MAGNETIC COILS
See MAGNET COILS
MAGNETIC ENERGY STORAGE
See also SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Switching Circuits
New one-phase dual converter for superconducting inductive energy storage and transfer applications: the one-phase inductor-converter bridge, 9:29985 (R;US)
MAGNETIC FILTERS
Performance Testing
Collection of micron-sized particles at high velocities in HGMS, 9:28355 (R;US)
MAGNETIC MIRROR TYPE REACTORS
See also FIELD-REVERSED MIRROR REACTORS
MARS REACTOR
TMR REACTORS
Planning
Magnetic fusion: planning for the future, 9:30030 (R;US)
Safety
Safety comparison of d-d and d-t fueled fusion reactors, 9:30016 (RA;US)
MAGNETIC MIRRORS
Including systems with minimum-B configuration.
See also MFTF DEVICES
TANDEM MIRRORS
Loss Cone Instability
Dependence of the drift cyclotron loss cone instability on the radial density gradient, 9:29966 (J;US)
Plasma Diagnostics
Particle diagnostics for magnetic fusion experiments, 9:29984 (BA;US)
MAGNETIC MONOPOLES
Gyroelectric Ratio
Gyroelectric ratio of supersymmetrical monopole determined by its structure, 9:29631 (R;IT)
Radiation Flux
Fate of superheavy magnetic monopoles in a neutron star, 9:29534 (R;IT)
Research Programs
Theoretical high energy physics. Progress report, May 1, 1983-April 30, 1984, 9:29627 (R;US)
MAGNETIC SPECTROMETERS
Energy Resolution
Obtaining of the high energy-resolution spectra of heavy-ion on a QQDQ magnetic spectrometer, 9:29796 (J;CN;CH)
MAGNETIZATION
Irreversible Processes
Irreversible magnetization in Co-W thin films, 9:28784 (RA;IL)
MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS
MAGNETOHYDRODYNAMICS
Research Programs
Kinetic theory of gases, magneto-fluid dynamics and their application. Interim 1 Dec 81-30 Nov 82, 9:29579 (R;US)
MAGNETOSPHERE

MELANOMAS
Epidemiology
Malignant melanoma in the Kaiser Foundation health plan of northern California: a comparison of incidence and measures of health care utilization between the Lawrence Livermore National Laboratory and surrounding health plan groups, 9:29416 (R;US)
MELTDOWN
Containment
Investigation of the thermodynamic conditions in an underground nuclear power plant after core melt, in combination with a risk-oriented evaluation, 9:28394 (R;DE;In German)
Fuel-Cladding Interactions
UO_2/Zircaloy-4 chemical interactions and reaction kinetics from 1000 to 1700°C under isothermal conditions, 9:28425 (R;DE)
Risk Assessment
Investigation of the thermodynamic conditions in an underground nuclear power plant after core melt, in combination with a risk-oriented evaluation, 9:28394 (R;DE;In German)
MELTING
Continuous many-body melting and its experimentally observable consequences, 9:29881 (RA;IL)
MEMBRANES
See also CELL MEMBRANES
Spin-Lattice Relaxation
Proton spin-lattice relaxation in natural biological membranes systems, 9:28939 (RA;PL;In Polish)
MERCURY
Social Impact
Impact of mercury releases at the Oak Ridge complex. Hearing before the Subcommittee on Investigations and Oversight and the Subcommittee on Energy Research and Production, US House of Representatives, Ninety-Eighth Congress, first session, July 11, 1983, 9:29267 (B;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
MERCURY 200
E1-Transitions
Total radiative widths of neutron resonances and photon dipole strength function of compound-compound gamma transitions (sup(143-146)Nd nuclei), 9:29759 (RA;SU;In Russian)
S States
Total radiative widths of neutron resonances and photon dipole strength function of compound-compound gamma transitions (sup(143-146)Nd nuclei), 9:29759 (RA;SU;In Russian)
MERCURY ISOTOPES
See also MERCURY 200
E2-Transitions
Collective and one-body degrees of freedom in high spin states, 9:29790 (R;DE;In German)
High Spin States
Collective and one-body degrees of freedom in high spin states, 9:29790 (R;DE;In German)
MERONS
Stability
Stability of merons in gravitational models, 9:29890 (R;IT)
MESH GENERATION
Finite Element Method
Adaptive finite element grid generation and extension for elliptic problems posed on unbounded domains, 9:30088 (R;US)
MESON FACTORIES
Experiment Planning
Nuclear and particle physics aspects of hyperon and antinucleon interactions, 9:29583 (R;US)
MESON RESONANCES

METEOROLOGY
Data
Solar Radiation Data Directory. A guide to solar radiation and meteorological data collection activities in the United States, 9:28061 (R;US)
Data Compilation
Development and application of a merged solar and meteorological data base, 9:28524 (BA;US)

METHANATION
Catalysts
Crystallite size and support effects on CO hydrogenation reactions. Final progress report, January 1, 1982-August 30, 1984, 9:28027 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)

METHANE
Chemical Preparation
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Chemical Reaction Yield
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Chemical Reactions
Use of pulse radiolysis to measure high temperature kinetics, 9:28962 (R;US)
Combustion
Mechanistic and kinetic studies of the elementary processes in catalytic combustion of methane. Annual report, 1 Sep 82-31 Aug 83, 9:27831 (R;US)
Economics
Economic evaluation of directional drilling for methane drainage from coalbeds. Report of investigations/1984, 9:27818 (R;US)
Marketing
Sale of surplus digester and landfill gas to public utilities, 9:28048 (R;US)
Production
Review of the potential for biomass resources and conversion technology. Final report, Jan-Jul 83, 9:28034 (R;US)
Recovery
Coalbed methane recovery and utilization in the United States, 9:27814 (R;US)
Economic evaluation of directional drilling for methane drainage from coalbeds. Report of investigations/1984, 9:27818 (R;US)
Task 6 - field monitoring and evaluation of MRCP resource application. Technical progress report No. 47, 9:27813 (R;US)
Resource Assessment
Coal bed methane potential of the Raton Mesa coal region, Raton Basin, Colorado, 9:27809 (R;US)
Steam Reformer Processes
Thermochemical energy transport systems study, 9:28190 (R;US)
Synthesis
Thermochemical gasification of high-moisture biomass feedstocks, 9:28037 (R;US)

METHANOL
Chemical Preparation
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Conversion
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
Decomposition
Decomposition of methanol, formaldehyde, and formic acid on nonpolar (1010), stepped (5051), and (0001) surfaces of ZnO by temperature-programmed decomposition, 9:28950 (J;US)
NMR Spectra
Temperature dependence of screening of ^{13}C nuclei in simple aliphatic alcohols, 9:28935 (RA;PL;In Polish)
Synthesis
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)

METHANOL PLANTS
Design
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)

METHOTREXATE
Teratogenesis
Analysis of teratogens and potential teratogens using FETAX (frog embryo teratogenesis assay: Xenopus), 9:29471 (RA;US)

METHYL ALCOHOL
See METHANOL

METHYL IODIDE
Chemical Reactions
Reaction of excited iodine atoms with methyl iodide: rate constant determinations, 9:28960 (J;US)

METHYL METHANESULFONATE
Genetic Effects
DNA damage in mammalian sperm assayed by alkaline elution, 9:29488 (RA;US)

METHYL-FUEL
See ALCOHOLS
METHANOL

METHYLMERCURY
Genetic Effects
Cytogenetic analysis of sterile male progeny from mutagen-exposed parents, 9:29480 (RA;US)

METROPOLITAN AREAS
See URBAN AREAS

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Superconducting Magnets
Low level signal data acquisition for the MFTF-B superconducting magnet system, 9:30028 (R;US)
MHD GENERATORS
See also COAL-FIRED MHD GENERATORS
Mathematical Models
Transient electrical behavior in magnetohydrodynamic generators. Final report, 9:28562 (R;US)
Transients
Transient electrical behavior in magnetohydrodynamic generators. Final report, 9:28562 (R;US)
MICELLAR SYSTEMS
Chemical Reaction Kinetics
Time dependent reactivity of species embedded in micelles: Lifetime distribution of photoproduced N,N,N',N'-tetramethylbenzidine cation radicals in sodium dodecyl sulfate micelles, 9:28949 (J;US)
Probes
Charge separation in photoredox reactions. Technical progress report, May 1, 1981-May 1, 1984, 9:28955 (R;US)
MICROANALYSIS
Separation Processes
Capillary separations with calorimetric absorbance detection. Technical progress report, September 1, 1983-August 31, 1984, 9:28860 (R;US)
MICROBIAL FLORA

MOLECULES
Electric Dipoles
Response and normal modes of a system in the electric and magnetic-dipole approximation, 9:29658 (R;IT)
Entropy
Predictions of entropies of molecules and liquids, 9:28900 (R;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Design
Development of molten carbonate fuel cell power plant technology. Quarterly technical progress report No. 17, October 1 to December 31, 1983, 9:28563 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1982-October 31, 1982, 9:28567 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, November 1, 1981-January 31, 1982, 9:28565 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1981-October 31, 1981, 9:28564 (R;US)
Materials
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1982-October 31, 1982, 9:28567 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, November 1, 1981-January 31, 1982, 9:28565 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, May 1, 1982-July 31, 1982, 9:28566 (R;US)
Materials Testing
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1981-October 31, 1981, 9:28564 (R;US)
Performance Testing
Development of molten carbonate fuel cell power plant technology. Quarterly technical progress report No. 17, October 1 to December 31, 1983, 9:28563 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1982-October 31, 1982, 9:28567 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, August 1, 1981-October 31, 1981, 9:28564 (R;US)
Poisoning
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, May 1, 1982-July 31, 1982, 9:28566 (R;US)
Research Programs
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, November 1, 1981-January 31, 1982, 9:28565 (R;US)
Development of molten carbonate fuel cell power plant. Quarterly technical progress report, May 1, 1982-July 31, 1982, 9:28566 (R;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS

MOLTEN SALTS
Corrosive Effects
Electrochemical investigations on the corrosion of gas turbine materials in sulfate melts with and without superimposed mechanical stress, 9:28773 (R;DE;In German)
Entropy
Predictions of entropies of molecules and liquids, 9:28900 (R;US)
Heat Storage
Direct absorption receiver, 9:28131 (R;US)
MOLTING
Biochemistry
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology and control of the crustacean molt cycle, 9:29336 (RA;US)
MOLYBDENUM
Availability
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
Biological Effects
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
Brazed Joints
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
Catalytic Effects
Chemical poisoning in model heterogeneous reactions. Final report, May 1, 1977-April 30, 1983, 9:28901 (R;US)
Chemical Analysis
Analytical methods associated with the recovery of uranium, 9:27896 (R;US)
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Plating
Aspects of electroless nickel plating on molybdenum, 9:28786 (R;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
MOLYBDENUM 94
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Russian)
MOLYBDENUM 96
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Russian)
MOLYBDENUM 98
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Russian)

Emission Spectra
Excited-state spectra and lifetimes for oxomethoxomolybdenum(V) tetraphenylporphine: a comparison of d/sup 1/ and d/sup 9/ metalloporphyrin photophysics, 9:28922 (J;US)
Excited States
Excited-state spectra and lifetimes for oxomethoxomolybdenum(V) tetraphenylporphine: a comparison of d/sup 1/ and d/sup 9/ metalloporphyrin photophysics, 9:28922 (J;US)
MOLYBDENUM SULFIDES
Catalytic Effects
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
MONITORED RETRIEVABLE STORAGE
Monitored Retrievable Storage Program: a mid-term report, 9:27953 (R;US)
Cost
Monitored retrievable storage conceptual studies: tunnel-rack, 9:27919 (R;US)
Design
Monitored retrievable storage conceptual studies: tunnel-rack, 9:27919 (R;US)
Reliability analysis of the tunnel rack and dry well monitored retrievable storage concepts, 9:27917 (R;US)
Risk Assessment
Safety evaluation of tunnel rack and dry well monitored retrievable storage concepts, 9:27979 (R;US)
Safety
Safety evaluation of tunnel rack and dry well monitored retrievable storage concepts, 9:27979 (R;US)
MONITORS (AIR POLLUTION)
See AIR POLLUTION MONITORS
MONITORS (BEAM)
See BEAM MONITORS
MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS
MONOCLONAL ANTIBODIES
Uses
Monoclonal antibodies in cancer detection and therapy, 9:29410 (J;US)
MONTANA
Background Radiation
Evaluation of radon sources and phosphate slag in Butte, Montana, 9:29243 (R;US)
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
MORGANTOWN ENERGY TECHNOLOGY CENTER
Gaseous Wastes
Environmental monitoring report: Morgantown Energy Technology Center, calendar year 1983, 9:29204 (R;US)

Liquid Wastes
Environmental monitoring report: Morgantown Energy Technology Center, calendar year 1983, 9:29204 (R;US)
Solid Wastes
Environmental monitoring report: Morgantown Energy Technology Center, calendar year 1983, 9:29204 (R;US)
MOS TRANSISTORS
Metal Oxide Silicon transistors.
High speed, low power MOS-technologies, 9:29042 (R;DE;In German)
Physical Radiation Effects
N and P MOS on sapphire transistors irradiated at very high radiation doses versus gate bias during irradiation, 9:29148 (R;FR)
Trapped Electrons
Trapping and trap generation in the gate oxides of MOS devices, 9:29045 (RA;IL)
MOULTING
See MOLTING
MOUND LABORATORY
Radiation Monitoring
Environmental monitoring at Mound: 1983 report, 9:29241 (R;US)
MOUTH
See ORAL CAVITY
MP35N
See ALLOY-MP35N
MSSTF
Midtemperature Solar System Test Facility at Sandia Laboratories which includes the Subssystem Test Facility and the Collector Module Test Facility.
Heat Losses
Heat loss studies, 9:28129 (R;US)
MULTI-CHANNEL ANALYZERS
Fiber Optics
Multi-GHz multi-channel photonic analog data processing system, 9:29048 (R;US)
Streak Photography
Multi-GHz multi-channel photonic analog data processing system, 9:29048 (R;US)
MULTI-ELEMENT ANALYSIS
For analysis of 2 or more elements or isotopes of different elements.
Activation Analysis
Utilization of a ^{252}Cf-^{238}U fueled subcritical multiplier for neutron activation analysis. Rev., 9:28881 (R;US)
MULTIVARIATE ANALYSIS
Mathematical statistics: multi-variate distributions with given boundaries, 9:30092 (TJ;US)
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MUNICIPAL BUILDINGS
See PUBLIC BUILDINGS
MUNICIPAL WASTES
Fluidized-Bed Combustion
Solid waste trial for coal-burning process, 9:28052 (J;US)
MUON ANTINEUTRINOS
Neutrino-Electron Interactions
Measurement of the ratio sigma(νsub(μ)e→νs ub(μ)e)/sigma(anti νsub(μ)e→anti νsub(μ)e), 9:29593 (RA;HU)
MUON DETECTION
Multimuon events in νsub(μ)(anti νsub(μ))N interactions and detection of dimuon events in a neutrino detector, 9:29603 (RA;XJ;In Russian)
Liquid Ionization Chambers
Liquid ionization chamber using tetramethylsilane, 9:29132 (R;DE;In German)
MUON NEUTRINOS
See also MUON ANTINEUTRINOS
Neutrino-Electron Interactions
Measurement of the ratio sigma(νsub(μ)e→νs ub(μ)e)/sigma(anti νsub(μ)e→anti νsub(μ)e), 9:29593 (RA;HU)
Preliminary results on νsub(μ)+e$^-$→νsub(μ)+e$^-$, 9:29592 (RA;HU)
Neutrino-Nucleon Interactions
Measurement of the neutral-to-charged current cross-section ratios for νsub(μ)-interactions on proton and neutron, 9:29594 (RA;HU)
MUON PAIRS
Pair Production
Electroweak radiative corrections to the $^+e^-e \to {}^+\mu^-\mu$ asymmetry, 9:29625 (R;DE)
Multimuon events in νsub(μ)(anti νsub(μ))N interactions and detection of dimuon events in a neutrino detector, 9:29603 (RA;XJ;In Russian)
MUON REACTIONS
Direct Reactions
Approach to chemical equilibrium in thermal models, 9:29859 (J;US)
MUONS
Radiative Decay
Rare muon decays and lepton-family number conservation, 9:29606 (R;US)
Weak Particle Decay
Rare muon decays and lepton-family number conservation, 9:29606 (R;US)

NEUTRAL BEAM SOURCES
Design
Neutral particle beam production and injection, 9:29983 (BA;US)
Diagnosis
Neutral particle beam production and injection, 9:29983 (BA;US)
NEUTRALIZATION (CHEMICAL)
See PH VALUE
NEUTRETTOS
See MUON NEUTRINOS
NEUTRINO OSCILLATION
Limiting Values
Neutrino physics at Fermilab, 9:29623 (BA;US)
Neutrino-Nucleon Interactions
Limitations on parameters of neutrino oscillations according to data for quasielastic scattering of neutrino beams at the Serpukhov Institute of High Energy Physics, 9:29587 (R;DE)
Research Programs
High Energy Physics Group. Annual progress report, fiscal year 1983, 9:29590 (R;US)
NEUTRINO REACTIONS
Cross Sections
Neutrino physics at Fermilab, 9:29623 (BA;US)
Deep Inelastic Scattering
Lepton scattering from nuclear targets, 9:29778 (RA;US)
Total Cross Sections
Total cross section of neutrino (antineutrino) radiative scattering on deuteron with account for neutrino spectra, 9:29704 (RA;SU;In Russian)
NEUTRINO-ELECTRON INTERACTIONS
Elastic Scattering
Preliminary results on $\nu sub(\mu)+e^- \rightarrow \nu sub(\mu)+e^-$, 9:29592 (RA;HU)
Total Cross Sections
Measurement of the ratio sigma($\nu sub(\mu)e \rightarrow \nu s$ ub(μ)e)/sigma(anti $\nu sub(\mu)e \rightarrow$ anti $\nu sub(\mu)e$), 9:29593 (RA;HU)
NEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-NUCLEON INTERACTIONS
Charged-Current Interactions
Search for narrow $\mu(\pi($ mass enhancements in a neutrino bubble-chamber experiment, 9:29613 (J;US)
Coherent Production
Evidence for neutrino- and antineutrino-induced coherent π^0 production, 9:29617 (J;US)

Cross Sections
Measurement of the neutral-to-charged current cross-section ratios for νsub(μ)-interactions on proton and neutron, 9:29594 (RA;HU)
Deep Inelastic Scattering
Measurement of the nucleon structure function in the deep inelastic neutrino-iron scattering with a wide-band neutrino beam, 9:29596 (R;DE;In German)
Mass Spectra
Search for narrow μ(πf(mass enhancements in a neutrino bubble-chamber experiment, 9:29613 (J;US)
Pair Production
Multimuon events in νsub(μ)(anti νsub(μ))N interactions and detection of dimuon events in a neutrino detector, 9:29603 (RA;XJ;In Russian)
Weak Charged Currents
Measurement of the neutral-to-charged current cross-section ratios for νsub(μ)-interactions on proton and neutron, 9:29594 (RA;HU)

NEUTRINOS
See also ANTINEUTRINOS
MUON NEUTRINOS
Electric Charges
Neutrino charge in the linear R/sub xi/ gauge, 9:29641 (J;US)
Photoproduction
Photoproduction on electron of neutrino-antineutrino pairs with unequal to zero of the rest mass, 9:29599 (RA;SU;In Russian)

NEUTRON ACTIVATION ANALYSIS

THERMAL NEUTRONS
Beta-Minus Decay
Effect of second-class currents on angular distribution of beta decay products, 9:29705 (RA;SU;In Russian)
Feedback
A new neutron-feedback ICF driver, 9:30043 (J;US)
Multiple Scattering
Multiple scattering from an infinite plane slab, 9:29876 (J;NL)
RBE
Radiation carcinogenesis, 9:29452 (RA;US)
Semileptonic Decay
Search for nucleon decay into μi K^{0} and νK^{0}, 9:29616 (J;US)

Transformations
Field compensation as an alternative to magnetic shielding in searches for nn-bar transitions, 9:29640 (J;US)
Transmission
Report to the ^{238}U discrepancy task force on SIOB fits to the ORNL, CBNM, and JAERI transmission data, 9:29875 (R;US)

NEVADA
See also STEAMBOAT SPRINGS
Age Estimation
Geochemistry, age and strontium isotope composition of late tertiary and quaternary basalts and andesites in western Nevada and their relation to geothermal potential. Final report, October 1, 1982-December 31, 1983, 9:28212 (R;US)
Geochemical Surveys
Geochemistry, age and strontium isotope composition of late tertiary and quaternary basalts and andesites in western Nevada and their relation to geothermal potential. Final report, October 1, 1982-December 31, 1983, 9:28212 (R;US)
Geologic and hydrologic research on the Moana geothermal system, Washoe County, Nevada. Final report October 1, 1982-December 31, 1983, 9:28213 (R;US)
Geologic Structures
Stratigraphy and structure of the McCoy geothermal prospect, Churchill and Lander Counties, Nevada, 9:28196 (R;US)
Geothermal Resources
Geologic and hydrologic research on the Moana geothermal system, Washoe County, Nevada. Final report October 1, 1982-December 31, 1983, 9:28213 (R;US)
Geothermal Systems
Geochemistry, age and strontium isotope composition of late tertiary and quaternary basalts and andesites in western Nevada and their relation to geothermal potential. Final report, October 1, 1982-December 31, 1983, 9:28212 (R;US)
Stratigraphy and structure of the McCoy geothermal prospect, Churchill and Lander Counties, Nevada, 9:28196 (R;US)
Gravity Surveys
Geologic and hydrologic research on the Moana geothermal system, Washoe County, Nevada. Final report October 1, 1982-December 31, 1983, 9:28213 (R;US)
Stratigraphy
Stratigraphy and structure of the McCoy geothermal prospect, Churchill and Lander Counties, Nevada, 9:28196 (R;US)

NEVADA TEST SITE
Radioactive Waste Disposal
Bibliography of reports by US Geological Survey personnel on studies of underground nuclear test sites and on waste management studies at the Nevada Test Site and the Waste Isolation Pilot Plant site, New Mexico, January 1 to December 31, 1982, 9:27960 (R;US)
Radioactive Waste Facilities
Economic impacts of waste emplacement configuration for the proposed nuclear waste repository at the Nevada Test Site, 9:27954 (R;US)
Research Programs
Animal investigation program for the Nevada Test Site: 1957-1981, 9:29271 (R;US)
Spent Fuel Storage
Radiation dosimetry and monitoring for a test of geologic storage of spent nuclear fuel, 9:27984 (R;US)

NEW MEXICO
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
Geochemical Surveys
Thermal data for springs and wells, 9:28220 (RA;US)
Geothermal Exploration
Regional geothermal exploration in north central New Mexico. Final report, 9:28216 (R;US)
Geothermal Gradients
Measured geothermal gradients in north central New Mexico, 9:28218 (RA;US)
Geothermal Resources
Analysis of the geothermal energy potential of north central New Mexico, 9:28217 (RA;US)
Petroleum Deposits
Geologic investigations in support of a proposed carbon dioxide miscible flood in the MCA unit Maljamar-Grayburg/San Andres Pool, Lea County, New Mexico. Final report, 9:27845 (R;US)
Radioactive Waste Disposal
Bibliography of reports by US Geological Survey personnel on studies of underground nuclear test sites and on waste management studies at the Nevada Test Site and the Waste Isolation Pilot Plant site, New Mexico, January 1 to December 31, 1982, 9:27960 (R;US)
Solar Energy
New Mexico residential solar rate initiatives. Final report, 9:28062 (R;US)
Temperature Gradients
Analysis of the geothermal energy potential of north central New Mexico, 9:28217 (RA;US)
Temperature gradient studies near two groundwater constrictions in northern New Mexico, 9:28219 (RA;US)
Temperature gradient drilling in north central New Mexico, 9:28222 (RA;US)

NICKEL
Bubbles
Correlation of helium content and microstructure to bubble growth in helium irradiated thin films of nickel, 9:28759 (RA;US)
Catalytic Effects
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
Deposition
Aspects of electroless nickel plating on molybdenum, 9:28786 (R;US)
Emission Spectroscopy
Vibrational spectra of CO on Ni (100) studied by infrared emission spectroscopy, 9:29570 (R;US)
Gas Production Rates
Comparison of measured and calculated helium production in nickel for fission reactor irradiations, 9:28747 (RA;US)
Ion Implantation
Gasemission and surface modifications during helium implantation on nickel surfaces, 9:28774 (R;DE;In German)
Microstructure
Correlation of helium content and microstructure to bubble growth in helium irradiated thin films of nickel, 9:28759 (RA;US)
Neutron Diffraction
Dynamics of itinerant ferromagnets above T/sub c/, 9:28724 (R;US)
Oxygen 18 Reactions
Azimuthal angular correlations between heavy projectile fragments and light particles in the reaction ^{18}O + Ni at 84 MeV/u, 9:29754 (RA;US)
Paramagnetism
Dynamics of itinerant ferromagnets above T/sub c/, 9:28724 (R;US)
Trace Amounts
Marine sciences, 9:29290 (RA;US)
Voids
Correlation of helium content and microstructure to bubble growth in helium irradiated thin films of nickel, 9:28759 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

NICKEL 58 REACTIONS
Spallation
Projectile fission in ^{58}Ni-induced reactions at 15.3 MeV/u, 9:29746 (R;US)

NICKEL 58 TARGET
Neutron Reactions
To the problem of determination of an integral cross section of γ quantum yield at nucleus de-excitation, 9:29750 (RA;SU;In Russian)

Nickel 58 Reactions
Projectile fission in ^{58}Ni-induced reactions at 15.3 MeV/u, 9:29746 (R;US)
Nuclear Radii
Proton elastic scattering on complex nuclei, 9:29751 (RA;SU;In Russian)
Proton Reactions
Proton elastic scattering on complex nuclei, 9:29751 (RA;SU;In Russian)
NICKEL 60 TARGET
Neutron Reactions
Fluctuation of neutron widths and selection of optical nuclear potential parameters, 9:29760 (RA;SU;In Russian)
NICKEL ALLOYS
See also ALLOY-MP35N
NICKEL BASE ALLOYS
STELLITE 6
Displacement Rates
dpa calculations for neutron irradiated amorphous $Fe_{40}Ni_{40}B_{20}$ ribbons, 9:28768 (R;DE;In German)
Electric Conductivity
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)
Permeability
Environment and fracture ($Fe_{40}Ni_{40}P_{14}B_6$), 9:28763 (R;US)
Phase Studies
Characterization of TiB_2-Ni ceramics by transmission and analytical electron microscopy, 9:28815 (BA;US)
Transmission Electron Microscopy
Characterization of TiB_2-Ni ceramics by transmission and analytical electron microscopy, 9:28815 (BA;US)
Vickers Hardness
14-MeV neutron irradiation of copper alloys, 9:28748 (RA;US)
14-MeV neutron radiation-induced microhardness changes in copper alloys, 9:28749 (RA;US)
Voids
Model describing the compositional dependence of void nucleation in irradiated Fe-Ni-Cr alloys, 9:28771 (R;US)
NICKEL BASE ALLOYS
See also RENE-100
Corrosion
Perspective of the corrosive behavior of lithium and sodium, 9:28735 (R;US)
Corrosion Resistance
Behavior of Ni-Cr-Si coating alloys in Na_2SO_4, V_2O_5, and mixed salt hot corrosion. Final report, 9:28766 (R;US)
Passivation
Passivation breakdown of nickel and Zircaloy-4 in alkaline chloride solutions at 20 to 300°C, 9:28745 (R;CA)
NICKEL COMPOUNDS
Chemical Reactions
Studies of the reactions of group 8 transition-metal ions Fe^+, Co^+, and Ni^+ with linear alkanes. Determination of reaction mechanisms and MC/sub n/H/sub 2n/$^+$ ion structures using Fourier transform mass spectrometry collision-induced dissociation, 9:28924 (J;US)
NICKEL-CADMIUM BATTERIES
Electrodes
Sealed Ni-Cd batteries with sintered electrodes for parallel stand-by service at normal and elevated temperatures, 9:28480 (R;DE;In German)
Operation
Sealed Ni-Cd batteries with sintered electrodes for parallel stand-by service at normal and elevated temperatures, 9:28480 (R;DE;In German)
Waste Processing
Recycling of Ni-Cd batteries, 9:28676 (R;DE;In German)
NIMONIC PE16
Physical Radiation Effects
Fast neutron irradiation of alloys with a higher nickel content than SS 316, 9:28725 (R;FR;In French)
NIOBIUM
Critical Current
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Fabrication
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Surface Properties
FIM-Investigations of H_2, N_2 and O_2 interactions with the niobium surface, 9:28777 (RA;AT)
NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 625
INCONEL 706
INCONEL 718
NIOBIUM BASE ALLOYS
Production
Review of tantalum and niobium alloy production, 9:28736 (RA;US)
NIOBIUM BASE ALLOYS
Compatibility
Compatibility of refractory alloys with space reactor system coolants and working fluids, 9:28325 (RA;US)
Welding
Welding of refractory alloys, 9:28740 (RA;US)
NIOBIUM HYDRIDES
Wettability
Microstructural studies of hydrogen and deuterium in bcc refractory metals. Final technical report , 9:28803 (R;US)
NITRATES
See also PEROXYACETYL NITRATE
PETN
POTASSIUM NITRATES
SODIUM NITRATES
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
NITRIC ACID
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
Distribution Functions
Extraction of Eu(III) and Th(IV) with TBP in n-dodecane in the presence of nitric acid and the thermodynamic activity of the TBP in the system, 9:28862 (R;BR;In Portuguese)
Thermodynamic Activity
Extraction of Eu(III) and Th(IV) with TBP in n-dodecane in the presence of nitric acid and the thermodynamic activity of the TBP in the system, 9:28862 (R;BR;In Portuguese)
NITRIC OXIDE
NO.
Inelastic Scattering
Internal state distributions of molecules scattering and desorbing from surfaces, 9:28775 (RA;AT)
NITRILES
See also ACETONITRILE
Gas Chromatography
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials (Cyano polycyclic aromatic hydrocarbons), 9:27791 (R;US)
Nuclear Magnetic Resonance
Influence of monosubstituted aromatic solvents on propionitrile NMR shift, 9:28933 (RA;PL;In Polish)
NITRO COMPOUNDS
See also NITROPHENOL
POLYCYCLIC NITRO COMPOUNDS
TNT
Metabolism
Review of the literature on enzymatic reduction of nitrocompounds, 9:29328 (R;US)
Toxicity
Review of the literature on enzymatic reduction of nitrocompounds, 9:29328 (R;US)

NITROGEN
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Biological Effects
Chemical profiles of microalgae with emphasis on lipids, 9:28085 (RA;US)
Chemical Analysis
Elemental analysis round robin (In coal liquids; includes different methods), 9:27736 (RA;US)
Ecological Concentration
Litterfall sulfur and nitrogen inputs as influenced by power plant proximity, 9:29227 (J;NL)
Worldwide organic soil carbon and nitrogen data, 9:29260 (R;US)
Purification
Particle contamination in gas-insulated systems: new control methods and optimum SF_6/N_2 mixtures, 9:28828 (R;US)
NITROGEN 15
Isobaric Analogs
Angular distribution for $^{15}N(\pi^+,\pi^0)^{15}O$(g.s.) at T/sub π/ = 48 MeV p, 9:29737 (J;US)
NITROGEN 15 TARGET
Lithium 6 Reactions
Alpha transfer to ^{15}N and ^{16}O, 9:29717 (RA;IL)
Pion Plus Reactions
Angular distribution for $^{15}N(\pi^+,\pi^0)^{15}O$(g.s.) at T/sub π/ = 48 MeV p, 9:29737 (J;US)
NITROGEN 16
Beta-Minus Decay
O^+ reversible O^- transitions in A=16, 9:29715 (R;US)
Energy-Level Transitions
O^+ reversible O^- transitions in A=16, 9:29715 (R;US)
NITROGEN DIOXIDE
NO_2.
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
Oxidation
Indications of nonlinearities in processes of wet deposition, 9:29178 (RA;US)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
Air Pollution Abatement
Evaluation of an advanced dual-register coal burner for utility boiler NO/sub x/ control. Final report, 9:28255 (R;US)
Air Pollution Control
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Emission
Evaluation of an advanced dual-register coal burner for utility boiler NO/sub x/ control. Final report, 9:28255 (R;US)
Monitoring
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
NITROGENASE
Biochemical Reaction Kinetics
X-ray absorption studies of the molybdenum site of nitrogenase, 9:29346 (R;US)
X-Ray Spectroscopy
X-ray absorption studies of the molybdenum site of nitrogenase, 9:29346 (R;US)
NITROGENASES
See NITROGENASE
NITRO-GROUP DEHYDROGENASES
Code number 1.7
See also NITROGENASE
Chemical Radiation Effects
Radiation inactivation of glutamate dehydrogenase hexamer: lack of energy transfer between subunits, 9:29461 (J;US)
Inactivation
Radiation inactivation of glutamate dehydrogenase hexamer: lack of energy transfer between subunits, 9:29461 (J;US)
NITROPHENOL
Teratogenesis
Analysis of teratogens and potential teratogens using FETAX (frog embryo teratogenesis assay: Xenopus), 9:29471 (RA;US)
NITROSO COMPOUNDS
Biological Effects
Nucleic acid biochemistry of cells, 9:29333 (RA;US)
DNA Adducts
DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice, 9:29481 (RA;US)
Dose-Response Relationships
In-depth study of chemical mutagenesis in mouse germ cells using n-ethyl-n-nitrosourea (ENU) as a model mutagen, 9:29472 (RA;US)
Use of methylnitrosourea (MNU) as a model mutagen to explore biological variables affecting mutagenicity in mouse germ cells, 9:29473 (RA;US)
Genetic Effects
Cytogenetic analysis of sterile male progeny from mutagen-exposed parents, 9:29480 (RA;US)
DNA target sites associated with chemical induction of dominant-lethal mutations and heritable translocations in mice, 9:29481 (RA;US)
Non-breeding-test methods for studying induction of dominant skeletal mutations are easily applied to strain used in specific-locus experiments, 9:29478 (RA;US)
Metabolism
Chemical dosimetry studies in mammalian germ cells, 9:29486 (RA;US)
Mutagenesis
Breeding-test experiment shows transmission of many ENU-induced mutations, 9:29479 (RA;US)
Use of MNU-ENU double exposure in the spot test to explore the in vivo action of an O^6 alkyl transferase, 9:29474 (RA;US)
Risk Assessment
Non-breeding-test methods for studying induction of dominant skeletal mutations are easily applied to strain used in specific-locus experiments, 9:29478 (RA;US)
Teratogenesis
Breeding-test experiment shows transmission of many ENU-induced mutations, 9:29479 (RA;US)
Use of MNU-ENU double exposure in the spot test to explore the in vivo action of an O^6 alkyl transferase, 9:29474 (RA;US)
Toxicity
DNA repair studies in mammalian germ cells, 9:29487 (RA;US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NMR SPECTRA
Line Widths
Application of power spectra to analysis of line shape in NMR spectroscopy, 9:28868 (RA;PL;In Polish)
NMR SPECTROMETERS
Performance
Spin generators and measurement of weak magnetic fields, 9:29154 (RA;PL;In Polish)
NO. 2 FUEL OIL

After-Heat Removal
Sandia Laboratories studies 'coolability' of nuclear fuel under Nuclear Regulatory Commission's fuel-damage program, 9:28460 (J;US)
Cost
Report on the current situation with regard to nuclear fuel and the operations of Svensk Kaernbraenslefoersoerjning AB. Report to the Swedish Ministry of Industry, November 1982, 9:27993 (R;SE)
Fuel Management
Report on the current situation with regard to nuclear fuel and the operations of Svensk Kaernbraenslefoersoerjning AB. Report to the Swedish Ministry of Industry, November 1982, 9:27993 (R;SE)
NUCLEAR INDUSTRY
Bibliographies
Publications catalogue 1982-83, 9:28259 (R;CA)
NUCLEAR MAGNETIC RESONANCE
Mathematical Models
Electromagnetic field "coated" atom, 9:28870 (RA;PL;In Polish)
Molecular Structure
Influence of anion on molecular dynamics of guanidine salts, 9:28930 (RA;PL;In Polish)
Relaxation
Matrix elements, correlation functions and spectral density in stochastic mixed system, 9:28872 (RA;PL;In Polish)
Relaxation times in stochastic mixed systems, 9:28871 (RA;PL;In Polish)
Technology Assessment
Report and recommendtions of the nuclear magnetic resonance advisory committee, Georgia Statewide Health Coordinating Council, 9:29383 (R;US)
Zeeman Effect
Quantum resonance transitions induced by oscillating magnetic field, 9:28867 (RA;PL;In Polish)
NUCLEAR MATERIALS DIVERSION
Detection
System for imaging plutonium through heavy shielding, 9:27994 (R;US)
NUCLEAR MATERIALS MANAGEMENT
Fuel Assemblies
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)
IAEA Safeguards
Test of an LWR fuel assembly sealing system in a demonstration experiment at the Kahl Experimental Nuclear Power Station, 9:27999 (R;US)
Information Systems
Review and evaluation of the Nuclear Materials Management and Safeguards System (NMMSS). Volume 2. Analysis of DOE nuclear materials information resource requirements, 9:27991 (R;US)
Review and evaluation of the Nuclear Materials Management and Safeguards System (NMMSS). Volume 1. Comparison of DOE nuclear materials information system requirements with NMMSS capabilities and recommendations for NMMSS improvements, 9:27990 (R;US)
Review and evaluation of the Nuclear Materials Management and Safeguards System (NMMSS). Volume 3. Analysis of NMMSS capabilities, 9:27992 (R;US)
NUCLEAR MATTER
Collisions
High-energy nuclear collisions, 9:29862 (J;US)
Color Model
Meson radiation from a quark-gluon plasma by fission of chromoelectric flux tubes, 9:29649 (J;NL)
Coulomb Energy
Correlation coulomb energy of nuclear matter, 9:29812 (RA;SU;In Russian)
Density
Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering, 9:29825 (R;DE)
Equations of State
Evidence on the equation of state of nuclear matter at high densities, 9:29834 (RA;US)
Phase Transformations
Do light fermions destroy the confinement/deconfinement phase transition, 9:29854 (RA;US)
Pion Condensation
Pion condensates as anomalons, 9:29830 (RA;US)
NUCLEAR MEDICINE
Research Programs
Nuclear medicine progress report for quarter ending December 31, 1983, 9:29392 (R;US)
NUCLEAR MOLECULES
Quasi-molecular structures in nuclear systems, 9:29828 (RA;US)
NUCLEAR POWER
Financing
Investor perceptions of nuclear power, 9:27988 (R;US)
Forecasting
Nuclear power: epilogue or prologue?, 9:28531 (J;US)
Government Policies
Response of the Government of Ontario to the final report of the Royal Commission on Electric Power Planning, 9:28554 (R;CA)
Technology Assessment
Nuclear power: epilogue or prologue?, 9:28531 (J;US)
NUCLEAR POWER PLANTS
See also UNDERGROUND NUCLEAR STATIONS
Alarm Systems
Procedure for reviewing and improving power plant alarm systems. Volume 1, 9:28411 (R;US)
Procedure for reviewing and improving power plant alarm systems. Volume 2., 9:28412 (R;US)
Blowdown
Comparison of BEACON and COMPARE reactor cavity subcompartment analyses, 9:28439 (R;US)
Containment Buildings
Design spectra development considering short time histories, 9:28419 (R;US)
Control Rooms
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Data Compilation
UPDATE. Nuclear power program information and data, October-December 1983, 9:28521 (R;US)
Emergency Plans
Methods for implementing revisions to emergency operating procedures. Final report, 9:28443 (R;US)
Engineered Safety Systems
Environmental qualification of essential safety-related equipment for nuclear power plants, 9:28470 (J;US)
Influence of test and repair strategies on the unavailability of safety systems, 9:28468 (J;US)
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Investment
Nuclear power: epilogue or prologue?, 9:28531 (J;US)
Mechanical Structures
Design spectra development considering short time histories, 9:28419 (R;US)
Triaxial concrete constitutive models and their application to the nonlinear analysis of nuclear plant structures, 9:28356 (BA;US)
Modifications
Value-impact analysis of selected safety modifications to nuclear power plants. Final report, 9:28410 (R;US)

Personnel
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Review of maintenance personnel practices at nuclear power plants, 9:28271 (R;US)
Pipes
Assessment of structural computer code implementation of PVRC recommended piping damping values (Pressure Vessel Research Committee), 9:28352 (R;US)
Assessment of degraded nuclear piping by experimentation and tearing instability fracture mechanics analysis, 9:28467 (J;US)
Power Generation
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Primary Coolant Circuits
Collection of micron-sized particles at high velocities in HGMS, 9:28355 (R;US)
Public Opinion
Nuclear power: epilogue or prologue?, 9:28531 (J;US)
Public Policy
Nuclear energy, public health and public policy, 9:28458 (J;GB)
Quality Assurance
Evaluation of the reports on the status of quality assurance systems in the power plants. Pt. 1, annex, pt. 2, 9:28393 (R;DE;In German)
Improving quality and the assurance of quality in the design and construction of nuclear power plants: a report to Congress, 9:28331 (R;US)
Radiation Monitoring
1983 annual environmental report, Radiological. Volume 2. Duquesne Light Company, Beaver Valley Power Station, and Shippingport Atomic Power Station, 9:29235 (R;US)
Att rapportera stralningsmaetdata (reporting of indication data), 9:29311 (R;US)
Environmental radioactivity levels, Browns Ferry Nuclear Plant. Annual report, 1983, 9:29277 (R;US)
Environmental radioactivity levels, Sequoyah Nuclear Plant. Annual report, 1983, 9:29278 (R;US)
Environmental radioactivity levels Bellefonte Nuclear Plant. Annual report, 1983, 9:29246 (R;US)
Radioactive Effluents
1983 annual environmental report, Radiological. Volume 2. Duquesne Light Company, Beaver Valley Power Station, and Shippingport Atomic Power Station, 9:29235 (R;US)
Radioactive Waste Disposal
Report on the current situation with regard to nuclear fuel and the operations of Svensk Kaernbraenslefoersoerjning AB. Report to the Swedish Ministry of Industry, November 1982, 9:27993 (R;SE)
Reactor Control Systems
Critical function monitoring system algorithm development, 9:28371 (J;US)
Digital control of power transients in a nuclear reactor, 9:28380 (J;US)
Reactor Decommissioning
Decommissioning nuclear power plants. Memo file, 9:28451 (R;US)
Reactor Instrumentation
A new start-up range neutron monitor, 9:28372 (J;US)
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
An analytical response model of neutron sensors used in reactor instrumentation, 9:28375 (J;US)
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
Reactor Licensing
Reactor licensing procedure, 9:28329 (R;DE;In German)
Reactor Materials
Effect of thermal and irradiation aging simulation procedures on polymer properties, 9:28442 (R;US)
Reactor Operation
Licensee event report (LER) compilation. Volume 3, Number 3, 9:28435 (R;US)
Reactor Operators
Critical function monitoring system algorithm development, 9:28371 (J;US)
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Reactor Protection Systems
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
The high voltage perturbation technique for testing the response of neutron sensors of the type used in nuclear reactors, 9:28379 (J;US)
Reactor Simulators
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Risk Assessment
Probabilistic safety and design goals, 9:28392 (R;DE;In German)
Safety
IAEA efforts to improve nuclear power plant operational safety, 9:28530 (J;XA)
Stress Analysis
Triaxial concrete constitutive models and their application to the nonlinear analysis of nuclear plant structures, 9:28356 (BA;US)
Water Hammer
Evaluation of water hammer occurrence in nuclear power plants: technical findings relevant to unresolved safety issue A-1, 9:28432 (R;US)

NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS

NUCLEAR PROPERTIES
Nuclear constants, 9:29688 (R;SU)

NUCLEAR REACTION YIELD
Angular Distribution
Realization of automatic measurements of nuclear reaction product angular distribution, 9:29131 (RA;SU;In Russian)
On-Line Measurement Systems
Realization of automatic measurements of nuclear reaction product angular distribution, 9:29131 (RA;SU;In Russian)

NUCLEAR REACTIONS
See also COMPOUND-NUCLEUS REACTIONS
DIRECT REACTIONS
FISSION
FUSION REACTIONS
LEPTON REACTIONS
PHOTONUCLEAR REACTIONS
THERMONUCLEAR REACTIONS
Computerized Simulation
Microdosimetric measurements on nuclear reactions. Final technical report, 9:29146 (R;US)
Nuclear Models
Current status of high energy cascade models, 9:29835 (RA;US)
Symmetry Breaking
Spontaneously broken symmetries in nuclear physics, 9:29827 (RA;US)

NUCLEAR REACTORS
See REACTORS

NUCLEAR SAFETY
See RADIATION PROTECTION

NUCLEAR SHIP OTTO HAHN REACTOR
See OTTO HAHN REACTOR

NUCLEAR SHIPS
Marine Disposal
Low-level waste ocean disposal program. Annual technical progress report, June 1982-June 1983. Volume I. Summary, 9:27956 (R;US)

NUCLEAR SPIN RESONANCE
See NUCLEAR MAGNETIC RESONANCE

NUCLEAR STRUCTURE
Pions, delta's and quarks in nuclei, 9:29806 (R;FR)
Feynman Diagram
Feynman-Goldstone diagrams in a time-dependent basis, 9:29861 (J;US)
Three-Body Problem
^{3}He electromagnetic form factors: A simple theoretical approach, 9:29695 (R;DE)
Nuclear saturation and nuclear forces, 9:29866 (J;GB)
Two-Body Problem
Nuclear saturation and nuclear forces, 9:29866 (J;GB)
NUCLEAR TRADE
Trade or commerce involving special nuclear material or any other radioactive materials, instruments, equipment, plants, etc, of nuclear interest.
Proliferation
Exporting apocalypse: CANDU reactors and nuclear proliferation, 9:28294 (R;CA)
NUCLEAR WASTES
See RADIOACTIVE WASTES
NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS
NUCLEAR WEAPONS
Government Policies
Stabilizing Star Wars, 9:28529 (J;US)
Neutron Dosimetry
Little Boy replication: justification and construction, 9:29172 (R;US)
Nuclear Disarmament
Stabilizing Star Wars, 9:28529 (J;US)
Testing
Metal finishing and vacuum processes groups - Materials Fabrication Division. Progress report, November 1983-February 1984, 9:28794 (R;US)
Operation dominic I-1962. Technical report, 9:29169 (R;US)
NUCLEASES
Biochemical Reaction Kinetics
Processing of RNA in yeast, 9:29331 (RA;US)
Inhibition
Processing of RNA in yeast, 9:29331 (RA;US)
Liquid Column Chromatography
Genetics and biochemistry of DNA repair in Neurospora crassa. Final research report, September 1978-March 1984, 9:29322 (R;US)
NUCLEI
See also DEFORMED NUCLEI
HEAVY NUCLEI
HYPERNUCLEI
LIGHT NUCLEI
MAGIC NUCLEI
ORIENTED NUCLEI
Energy Levels
Spin-orbital nuclear interaction in a nuclear system, 9:29814 (RA;SU;In Russian)
Parton Model
Anomalous behaviour of nuclear structure functions revisited, 9:29843 (RA;US)
Proton Reactions
Radioactive nuclide yields for thick target at 22 MeV protons, 9:29765 (RA;SU;In Russian)
Quark Model
Deep inelastic lepton scattering and the quark structure of nuclei, 9:29842 (RA;US)
Structure Functions
Deep inelastic lepton scattering and the quark structure of nuclei, 9:29842 (RA;US)
Quark-parton structure functions of nuclei, 9:29823 (R;XJ)
NUCLEIC ACIDS
See also DNA
RNA
Metabolism
Progress report on contracts n6-ori-99 and at(30-1)910, 9:29316 (R;US)
NUCLEON-ANTINUCLEON INTERACTIONS
See also PROTON-ANTIPROTON INTERACTIONS
Experiment Planning
Nuclear and particle physics aspects of hyperon and antinucleon interactions, 9:29583 (R;US)
NUCLEON-HYPERON INTERACTIONS
Experiment Planning
Nuclear and particle physics aspects of hyperon and antinucleon interactions, 9:29583 (R;US)
Potentials
Phenomenological Σ -N potential, 9:29600 (RA;SU;In Russian)
NUCLEON-NUCLEON INTERACTIONS
See also NEUTRON-NEUTRON INTERACTIONS
Elastic Scattering
Hadrons from relativistic quarks and spin effects in high-energy processes at high Q^2, 9:29630 (R;SU)
Particle Production
Subthreshold pion production in nucleus-nucleus collisions - a co-operative process, 9:29840 (RA;US)
Quark Model
Hadrons from relativistic quarks and spin effects in high-energy processes at high Q^2, 9:29630 (R;SU)
NUCLEON-NUCLEON POTENTIAL
Study on the nucleon-nucleon potential characteristics on the base of a d(e,esup(')pn reaction, 9:29702 (RA;SU;In Russian)
NUCLEONS
See also NEUTRONS
PROTONS
Four-Body Problem
Study on the role of two-and multi-particle interactions in low-nucleon systems, 9:29703 (RA;SU;In Russian)
Quark Model
Pions, delta's and quarks in nuclei, 9:29806 (R;FR)
Structure Functions
Measurement of the nucleon structure function in the deep inelastic neutrino-iron scattering with a wide-band neutrino beam, 9:29596 (R;DE;In German)
NUCLEOPROTEINS
Biochemical Reaction Kinetics
Control of transcription in eukaryotic systems and studies of DNA-protein interaction, 9:29329 (RA;US)
NUCLEOSOMES
Molecular Models
Nucleosome and chromatin biophysics, 9:29335 (RA;US)
NUCLEOTIDES
Biosynthesis
Nucleic acid biochemistry of cells, 9:29333 (RA;US)
NUTRIENTS
Mineral Cycling
Nutrient budgets and internal cycling of N, P, K, Ca, and Mg in conventional tillage, no-tillage and old-field ecosystems on the Georgia piedmont, 9:29265 (J;US)
Uptake
Nutrient budgets and internal cycling of N, P, K, Ca, and Mg in conventional tillage, no-tillage and old-field ecosystems on the Georgia piedmont, 9:29265 (J;US)

O

OAK RIDGE
Contamination
Impact of mercury releases at the Oak Ridge complex. Hearing before the Subcommittee on Investigations and Oversight and the Subcommittee on Energy Research and Production, US House of Representatives, Ninety-Eighth Congress, first session, July 11, 1983, 9:29267 (B;US)
Financial Assistance
Analysis of annual assistance issues: City of Oak Ridge, Anderson, and Roane Counties, Tennessee. Final report, 9:30058 (R;US)
Radioactive Waste Disposal
Methodology for selecting low-level radioactive waste disposal sites with application to the Oak Ridge Reservation, 9:27936 (R;US)
OAK RIDGE ASSOCIATED UNIVERSITIES
See ORAU
OAK RIDGE NATIONAL LABORATORY
See ORNL

OAKS
Baseline Ecology
Five southern California oaks: identification and postfire management. Forest service general technical report (final), 9:29254 (R;US)
OCCUPATIONAL SAFETY
Manuals
Incidental Crane Operator's Manual: Environmental Health and Safety Department, 9:29512 (R;US)
OCEAN THERMAL ENERGY CONVERSION
Feasibility Studies
Ocean thermal energy conversion: an alternate source for ammonia, 9:28136 (R;US)
Heat Exchangers
Heat exchanger evaluation for the Ocean Thermal Energy Conversion program. Final report, 9:28135 (R;US)
Research Programs
Heat exchanger evaluation for the Ocean Thermal Energy Conversion program. Final report, 9:28135 (R;US)
Ocean Energy Technology Program summary, FY 1980-1983, 9:28134 (R;US)
Reviews
Ocean thermal energy: status and prospects, 9:28133 (R;US)
OCEAN THERMAL POWER PLANTS
Plumes
Far-field model of the regional influence of effluent plumes from Ocean Thermal Energy Conversion (OTEC) plants. Progress report, August 1982-March 1983, 9:28132 (R;US)
OCEANS
See SEAS
OCONEE-1 REACTOR
Auxiliary Water Systems
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Control Rooms
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Emergency Plans
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Reactor Instrumentation
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Shielding
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Water Chemistry
Secondary water chemistry at Oconee, 9:28278 (R;US)
OCONEE-2 REACTOR
Auxiliary Water Systems
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Control Rooms
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Emergency Plans
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Reactor Instrumentation
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Shielding
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Water Chemistry
Secondary water chemistry at Oconee, 9:28278 (R;US)
OCONEE-3 REACTOR
Auxiliary Water Systems
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Control Rooms
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Emergency Plans
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Reactor Instrumentation
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Shielding
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Water Chemistry
Secondary water chemistry at Oconee, 9:28278 (R;US)
OFFICE BUILDINGS
Computer-Aided Design
Envelope strategies for a corporate headquarters office building, 9:28654 (BA;US)
Thermal modeling and design of a dual-envelope office building, 9:28652 (BA;US)
Computerized Simulation
Thermal modeling and design of a dual-envelope office building, 9:28652 (BA;US)
Energy Conservation
Envelope strategies for a corporate headquarters office building, 9:28654 (BA;US)
Parametric analysis of energy impacts on office buildings due to climate, physical type, and occupancy characteristics, 9:28653 (BA;US)
Small office building handbook: Design for reducing first costs and utility costs, 9:28592 (R;US)
Energy Efficiency
Glazing optimization for energy efficiency in commercial office buildings, 9:28600 (BA;IE)
Mathematical Models
Parametric analysis of energy impacts on office buildings due to climate, physical type, and occupancy characteristics, 9:28653 (BA;US)
Windows
Glazing optimization for energy efficiency in commercial office buildings, 9:28600 (BA;IE)
OFFSHORE PLATFORMS
Includes gravity or fixed, floating, and towed platforms.
Modifications
Oil and gas from the sea, 9:27848 (R;DE;In German)
OHIO
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
OIL BURNERS
Fuel Injection Systems
Development of Schladitz fuel injection for commercial oil burners using residual fuel oils, 9:28594 (R;US)
OIL FIELDS
Offshore Operations
Oil and gas from the sea, 9:27848 (R;DE;In German)
OIL RESIDUES
See PETROLEUM RESIDUES
OIL SAND DEPOSITS
Chemical Composition
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
Geology
Tar sand process water control technology. Draft final report, 9:27891 (R;US)

Physical Properties
Tar sand process water control technology. Draft final report, 9:27891 (R;US)

OIL SAND OILS
See BITUMENS

OIL SAND PROCESSING PLANTS
Environmental Impacts
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)

OIL SANDS
Hot-Water Processes
Recovery of oil from Utah's Tar Sands. Final report, December 1, 1979-March 31, 1983, 9:27885 (R;US)
In-Situ Processing
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
Meetings
II international conference on heavy crude and tar sands. Summary report, 9:27842 (R;US)
Processing
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
Pyrolysis
Recovery of oil from Utah's Tar Sands. Final report, December 1, 1979-March 31, 1983, 9:27885 (R;US)

OIL SHALE INDUSTRY
Environmental Impacts
Formation and transformation of particulate polycyclic organic matter emitted from coal fired power plants and oil shale retorting. Final report, 9:27802 (R;US)

OIL SHALE PROCESSING PLANTS
Environmental Impacts
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)

OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER

OIL SHALES
See also BLACK SHALES
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
In-Situ Retorting
Postburn characterization of a geokinetics in situ oil shale retort, 9:27884 (R;US)
Retorting
Oil shale retorting processes: a technical overview, 9:27887 (R;US)
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)
Testing and performance of the Pacific Northwest Laboratory 6-kg retort, 9:27886 (R;US)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Aerial Monitoring
Response of crude oil slicks to dispersant treatment at sea, 1978 tests. Final report, Jan 78-Dec 80, 9:27870 (R;US)
Response of crude oil slicks to dispersant treatment at sea, 1979 tests. Final report, Jan 79-Dec 80, 9:27871 (R;US)
Environmental Impacts
Summary and analysis of state and selected foreign procedures for determining the costs of natural resource damages from releases of oil or hazardous materials, 9:29310 (R;US)
Spatial Distribution
Response of crude oil slicks to dispersant treatment at sea, 1978 tests. Final report, Jan 78-Dec 80, 9:27870 (R;US)
Response of crude oil slicks to dispersant treatment at sea, 1979 tests. Final report, Jan 79-Dec 80, 9:27871 (R;US)

OIL WELLS
Drill Stem Testing
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Well Completion
Alaska index, December 1981-April 1983, 9:27862 (R;US)
Well Drilling
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)

OIL-EXPORTING COUNTRIES
For broad, general use only; if specific countries are discussed use the specific country descriptor.
Competition
Energy Secretary Donald Hodel tells international audience oil demand will continue to decline in industrialized nations, 9:27863 (J;US)

OIL-IMPORTING COUNTRIES
For broad, general use only; if specific countries are discussed, use the specific country descriptor.
Energy Conservation
Energy Secretary Donald Hodel tells international audience oil demand will continue to decline in industrialized nations, 9:27863 (J;US)
Fuel Substitution
Energy Secretary Donald Hodel tells international audience oil demand will continue to decline in industrialized nations, 9:27863 (J;US)

OLEFINS
See ALKENES

OLIGONUCLEOTIDES

ONCOGENIC TRANSFORMATIONS
Biochemistry
Molecular genetics of carcinogenesis, 9:29345 (RA;US)
Plasma membrane reorganization induced by chemical transformation in cultura, 9:29327 (R;US)
DNA-Cloning
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
Genetic Mapping
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
Radioinduction
Radiation carcinogenesis, 9:29452 (RA;US)

ON-LINE COMPUTERS
See COMPUTERS

ON-LINE MEASUREMENT SYSTEMS
Standards
Application of internal standards in routine vapor measurements by gas chromatography, 9:29226 (J;US)

ONTARIO
Electric Power
Response of the Government of Ontario to the final report of the Royal Commission on Electric Power Planning, 9:28554 (R;CA)
Energy Policy
Response of the Government of Ontario to the final report of the Royal Commission on Electric Power Planning, 9:28554 (R;CA)

OPTICAL EQUIPMENT
Measuring Instruments
Front lighted optical tooling method and apparatus, 9:29049 (P;US)
Tools
Front lighted optical tooling method and apparatus, 9:29049 (P;US)
OPTICAL FIBERS
Radiation Effects
Radiation effects in optoelectronic devices (Review), 9:29150 (R;US)
Refractivity
Iterative method for reconstruction of optical fiber refractive index profile, 9:29904 (RA;IL)
OPTICAL FILTERS
Diffraction
Spatial filtering with modulated volume gratings, 9:29900 (RA;IL)
OPTICAL MODELS
Alpha Reactions
Local density approximation in effective density-dependent αN-interactions, 9:29753 (R;DE)
OPTICAL SYSTEMS
Alignment
Alignment and fabrication errors in optical systems, 9:29153 (RA;IL)
Coatings
AR coating with high damage threshold on SiO_2 glass. Final report, 9:30026 (R;US)
Design
Long path length temperature-controlled absorption cell for spectroscopic studies of radioactive compounds, 9:28883 (J;US)
Performance
Long path length temperature-controlled absorption cell for spectroscopic studies of radioactive compounds, 9:28883 (J;US)
OPTICS
Nonlinear Problems
Recent nonlinear optical experiments using x-rays, 9:29903 (RA;IL)
ORAL CAVITY
Hard X Radiation
Spinocellular carcinoma of the lip, effects of radiotherapy. 109 case studies of the Dept. of Radiology of the Dermatological Clinic of Univ. Muenchen, 9:29389 (R;DE;In German)
Radiotherapy
Spinocellular carcinoma of the lip, effects of radiotherapy. 109 case studies of the Dept. of Radiology of the Dermatological Clinic of Univ. Muenchen, 9:29389 (R;DE;In German)
ORAU
Research Programs
Annual report to the Office of Nuclear Safety, Fiscal Year 1983, 9:29513 (R;US)
ORBITAL SOLAR POWER PLANTS
Preliminary working paper: satellite power system and lesser developed countries, 9:28092 (R;US)
Electrostatics
Electrostatic protection of the Solar Power Satellite and rectenna. Part I. Protection of the Solar Power Satellite, 9:28093 (R;US)
ORE PROCESSING
Environmental Impacts
Polonium-210 in the environment around a radioactive waste disposal area and phosphate ore processing plant, 9:27978 (J;GB)
OREGON
Geochemical Surveys
Data release for parts of the eastern Adel quadrangle, Oregon, 9:27895 (R;US)
Radiometric Surveys
Data release for parts of the eastern Adel quadrangle, Oregon, 9:27895 (R;US)
ORES

ORGANOMETALLIC COMPOUNDS
PROTEINS
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)
Mass Spectra
EPA/NIH (Environmental Protection Agency/National Institutes of Health) mass spectral data base, supplement 2, 1983; includes 1983 cumulative indexes, 9:28879 (R;US)
ORGANIC FLUORINE COMPOUNDS
Biological Effects
Ocular toxicity of 2,2,2-trifluoroethanol in rabbits, 9:29510 (J;US)
Complexes
Influence of solvent on proton transport in complexes of pyridine alkalines with trifluoroacetic acid, 9:28869 (RA;PL;In Polish)
ORGANIC HALOGEN COMPOUNDS
See also HALOGENATED ALIPHATIC HYDROCARBONS
ORGANIC CHLORINE COMPOUNDS
ORGANIC FLUORINE COMPOUNDS
Solutions
Densities of dilute uranium hexafluoride solutions, 9:28915 (R;US)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also CARBAMATES
GUANIDINES
NITRILES
NITRO COMPOUNDS
NITROSO COMPOUNDS
PORPHYRINS
Quantitative Chemical Analysis
Rapid estimation of organic nitrogen in oil shale wastewaters, 9:27893 (R;US)
ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
See also PHOSPHORIC ACID ESTERS
Molecular Structure
Use of T_1 relaxation times and Overhauser effect of ^{13}C and ^{31}P nuclei to study molecules reorientation and intramolecular motions of phosphororganic compounds, 9:28941 (RA;PL;In Polish)
Teratogenesis
Specific locus studies with DBCP and HMPA, 9:29475 (RA;US)

Toxicity
Specific locus studies with DBCP and HMPA, 9:29475 (RA;US)

ORGANIC POLYMERS
See also POLYAMIDES
POLYESTERS
POLYETHYLENE GLYCOLS
RUBBERS
THERMOPLASTICS

Crystal Structure
Bis(pentamethylcyclopentadienyl)ytterbium(II) as a Lewis acid and electron-transfer ligand: preparation and crystal structures of [Yb(Me5C5)2(μ-CO)/sub x/Mn(CO)/sub 5-x/]/sub y/ (x,y = 2; x = 3, y = ∞), 9:28823 (J;US)

Electrochemistry
Photoelectrochemistry of conducting polymers (Polypyrrole, polythiophene, polyaniline, polyazulene), 9:28011 (R;US)

Photochemistry
Photoelectrochemistry of conducting polymers (Polypyrrole, polythiophene, polyaniline, polyazulene), 9:28011 (R;US)

Synthesis
Bis(pentamethylcyclopentadienyl)ytterbium(II) as a Lewis acid and electron-transfer ligand: preparation and crystal structures of [Yb(Me5C5)2(μ-CO)/sub x/Mn(CO)/sub 5-x/]/sub y/ (x,y = 2; x = 3, y = ∞), 9:28823 (J;US)

ORGANIC SOLVENTS

Comparative Evaluations
Advanced research for the characterization of hydrogen donor solvents in two-stage liquefaction. Quarterly report, January 1-March 31, 1984, 9:27766 (R;US)

Evaporation
Determination of evaporation rates of organic solvents by thin-film evaporometer, 9:28948 (R;US)

Health Hazards
Health hazard evaluation determination report MHETA-82-007-9003, Bethlehem Steel, Ellsworth Coal Preparation Plant, MSHA mine i.d. 11-02632, Eighty-four, Pennsylvania, 9:29216 (R;US)

Hydrogenation
Advanced research for the characterization of hydrogen donor solvents in two-stage liquefaction. Quarterly report, January 1-March 31, 1984, 9:27766 (R;US)

Recycling
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)

Testing
Biomass processing and product recovery, Project No. 2. Interim progress report. Cooperative research and training in biomass conversion and utilization, 9:28045 (R;US)

ORGANIC SULFUR COMPOUNDS
See also THIONAPHTHENES

Chemiluminescence
Chemiluminescent detection of reduced sulfur compounds with ozone, 9:29231 (J;US)

Oxidation
Chemiluminescent detection of reduced sulfur compounds with ozone, 9:29231 (J;US)

ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.

Dissociation
High-resolution detection of collision-induced dissociation fragments by Fourier transform mass spectrometry, 9:28892 (J;US)

Fragmentation
High-resolution detection of collision-induced dissociation fragments by Fourier transform mass spectrometry, 9:28892 (J;US)

Mass Spectroscopy
High-resolution detection of collision-induced dissociation fragments by Fourier transform mass spectrometry, 9:28892 (J;US)

ORIENTED NUCLEI

Energy-Level Transitions
Gamma-ray linear polarization measurement on the "SPIN" facility, 9:29784 (RA;CS;In Czech)

ORNL

Research Programs
Biology Division. Progress report, August 1, 1982-September 30, 1983, 9:29441 (R;US)
Environmental Sciences Division annual progress report for period ending September 30, 1983, 9:29300 (R;US)
ORNL projects for the NRC Office of Nuclear Regulatory Research. April 1984 monthly highlights, 9:28407 (R;US)

OSMIUM

Sorptive Properties
Surface chemistry of large hydrocarbon and small inorganic molecules on Os(001) and Ru(001), 9:28916 (R;US)

OSMIUM COMPOUNDS

Catalytic Effects
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Final technical report, 9:28029 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Semiannual research report, 9:28028 (R;US)
Transition metal cluster complexes as catalysts for the conversion of coal-derived synthesis gas into organic feedstocks and fuels. Annual research report, 9:28030 (R;US)

OTEC
See OCEAN THERMAL ENERGY CONVERSION

OTTO HAHN REACTOR

Reactor Decommissioning
Decommissioning of the nuclear merchant ship OTTO HAHN, 9:28391 (R;DE;In German)

Reactor Dismantling
Decommissioning of the nuclear merchant ship OTTO HAHN, 9:28391 (R;DE;In German)

OUTER CONTINENTAL SHELF
See CONTINENTAL SHELF

OVERBURDEN

Thickness
Thickness of Knox Group overburden on Central Chestnut Ridge, Oak Ridge Reservation, 9:27947 (R;US)

OXETANE

OXYGEN
Activation Analysis
Organic oxygen characterization of coal and coal liquids. Quarterly progress report, February-April 1984, 9:27786 (R;US)
Chemical Analysis
Elemental analysis round robin (In coal liquids; includes different methods), 9:27736 (RA;US)
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)
Monitoring
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
Partial Pressure
Viscosity of coal slags as a function of composition, temperature, and oxygen partial pressure, 9:27712 (R;US)
OXYGEN 16
Energy-Level Transitions
O^+ reversible O^- transitions in A=16, 9:29715 (R;US)
OXYGEN 16 REACTIONS
Deep Inelastic Heavy Ion Reactions
Description of heavy-ion scattering by direct multistep reaction in the region between quasielastic and deep-inelastic reactions, 9:29747 (RA;DE;In German)
Fission
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
Spallation
Au target fragmentation at intermediate energies, 9:29793 (RA;US)
Search for anomalons among singly charged relativistic particles from ^{16}O interactions at 2 GeV/nucleon, 9:29729 (RA;US)
OXYGEN 16 TARGET
Lithium 6 Reactions
Alpha transfer to ^{15}N and ^{16}O, 9:29717 (RA;IL)
Phenomenological parametrization of a reduced width function in alpha-transfer reactions, 9:29719 (RA;SU;In Russian)
OXYGEN 18 REACTIONS
Fragmentation
Azimuthal angular correlations between heavy projectile fragments and light particles in the reaction ^{18}O + Ni at 84 MeV/u, 9:29754 (RA;US)
Multiple Production
Collective effects in subthreshold pion production, 9:29771 (RA;US)
OXYGEN 20
Energy Levels
4p and 6p-2h states in ^{20}O, 9:29716 (RA;IL)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYGEN PLANTS
Design
Air separation unit (AUU) trade-off study: three vs. two parallel trains, 9:27742 (RA;US)
Economics
Air separation unit (AUU) trade-off study: three vs. two parallel trains, 9:27742 (RA;US)
OXYGENASES
Code number 1.13
See also MIXED-FUNCTION OXIDASES
Molecular Structure
X-ray absorption studies of metalloprotein structure: cytochrome P-450, horseradish peroxidase, plastocyanin and laccase, 9:29347 (R;US)
X-Ray Spectroscopy
X-ray absorption studies of metalloprotein structure: cytochrome P-450, horseradish peroxidase, plastocyanin and laccase, 9:29347 (R;US)
OXYMETHYLENE
See FORMALDEHYDE
OZONE
Biological Effects
Impact of ozone on soybean yield, 9:29505 (J;US)
Karlson ozone sterilizer. Final report, 9:29380 (R;US)
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)

P

PACIFIC NORTHWEST REGION
See FEDERAL REGION X
PACKAGING
Design
Evaluation of iron-base materials for waste package containers in a salt repository, 9:27950 (R;US)
Thermal Insulation
Test specifications for nondestructive evaluation of foam anomalies in wall sections of TRUPACT-I, 9:28987 (R;US)
PADE APPROXIMATION
Analytic Functions
Interpolation by Pade approximants, 9:29669 (R;XJ)
Interpolation
Interpolation by Pade approximants, 9:29669 (R;XJ)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PAINTS
Waste Processing
Study about the practicability of thermal treatment of paint sludge and the state of present waste management and disposal technology, 9:28669 (R;DE;In German)
PALLADIUM
Catalytic Effects
Crystallite size and support effects on CO hydrogenation reactions. Final progress report, January 1, 1982-August 30, 1984, 9:28027 (R;US)
PALLADIUM 106
E1-Transitions
Total radiative widths of neutron resonances and photon dipole strength function of compound-compound gamma transitions (sup(143-146)Nd nuclei), 9:29759 (RA;SU;In Russian)
S States
Total radiative widths of neutron resonances and photon dipole strength function of compound-compound gamma transitions (sup(143-146)Nd nuclei), 9:29759 (RA;SU;In Russian)
PALLADIUM ALLOYS
Physical Radiation Effects
Amorphization through irradiation with the fission fragments of a Pd-Si alloy, 9:28801 (TJ;US)
PALO DURO BASIN
Aquifers
Use of natural radionuclides to predict the behavior of radwaste radionuclides in far-field aquifiers, 9:27974 (R;US)
Geology
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)

Geophysical Surveys
Well completion report - G. Friemel No. 1 (PD-5) well, Palo Duro Basin, Texas: unanalyzed data, 9:27927 (R;US)
Well completion report - Mansfield No. 1 (PD-4) well, Palo Duro Basin, Texas: unanalyzed data, 9:27929 (R;US)
Well completion report - Holtzclaw No. 1 (PD-10) well, Palo Duro Basin, Texas: unanalyzed data , 9:27930 (R;US)
Hydrology
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)
Well completion report - dissolution zone water wells (PD-8, PD-11, PD-12, PD-13), Palo Duro Basin, Texas: unanalyzed data, 9:27926 (R;US)
Well completion report - Holtzclaw No. 1 (PD-10) well, Palo Duro Basin, Texas: unanalyzed data , 9:27930 (R;US)
Natural Gas Wells
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)
Oil Wells
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)
Radioactive Waste Disposal
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Well completion report - Harman No. 1 (PD-8) well, Palo Duro Basin, Texas: unanalyzed data, 9:27928 (R;US)
Well completion report - dissolution zone water wells (PD-8, PD-11, PD-12, PD-13), Palo Duro Basin, Texas: unanalyzed data, 9:27926 (R;US)
Stratigraphy
Well completion report - Harman No. 1 (PD-8) well, Palo Duro Basin, Texas: unanalyzed data, 9:27928 (R;US)
Well completion report - G. Friemel No. 1 (PD-5) well, Palo Duro Basin, Texas: unanalyzed data, 9:27927 (R;US)
Well completion report - Mansfield No. 1 (PD-4) well, Palo Duro Basin, Texas: unanalyzed data, 9:27929 (R;US)

PAN
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)

PANTEX PLANT
Industrial Radiography
Application of neutron radiation inspection at the Pantex Plant, 9:29166 (BA;NL)

PARABOLIC DISH COLLECTORS
Design
Development and demonstration of a stationary reflector with tracking absorber (SRTA) solar collector. Final report, September 30, 1980-December 31, 1982, 9:28183 (R;US)
Fabrication
Development and demonstration of a stationary reflector with tracking absorber (SRTA) solar collector. Final report, September 30, 1980-December 31, 1982, 9:28183 (R;US)
Technology Assessment
Solar thermal parabolic dish systems: technology and applications, 9:28187 (R;US)

PARABOLIC POINT COLLECTORS
See PARABOLIC DISH COLLECTORS

PARADOX BASIN
Hydrology
Regional hydrology of the Green River-Moab area, northwestern Paradox Basin, Utah, 9:27959 (R;US)

PARAFFINS
See ALKANES

PARALLEL PROCESSING
Algorithms
High performance parallel computing. Final report 1 Jan-31 Dec 82, 9:30067 (R;US)
Stochastic Processes
Harmony theory: a mathematical framework for stochastic parallel processing. Technical report, 9:30068 (R;US)

PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE

PARTICLE BOOSTERS
First stages of a multistage accelerator.
Beam Optics
Calculation of the heavy ion Saclay tandem post accelerator beams, 9:29067 (R;FR)
Superconducting Cavity Resonators
Calculation of the heavy ion Saclay tandem post accelerator beams, 9:29067 (R;FR)

PARTICLE DECAY
Parity
Unusual initial and final state effects in quantum chromodynamics. Progress report, 9:29629 (R;US)

PARTICLE IDENTIFICATION
Statistics
Efficiency of high-energy particle identification statistical methods, 9:29123 (R;SU)

PARTICLE INTERACTIONS
See also HADRON-HADRON INTERACTIONS
Drell Model
Initial state interactions, factorization, and the Drell-Yan process, 9:29653 (BA;US)
Factorization
Initial state interactions, factorization, and the Drell-Yan process, 9:29653 (BA;US)
Multiple Production
Normalons, anomalons and anomalies in high energy cosmic rays, 9:29608 (RA;US)

PARTICLE MODELS
See also COMPOSITE MODELS
SIGMA MODEL
UNIFIED GAUGE MODELS
Hyperleptonic generations in unifying schemes, 9:29632 (RA;IL)
Phase Transformations
Metastable vacuum burning phenomenon, 9:29533 (R;XJ)
Research Programs
Research program in elementary particle theory. Progress report, 1984, 9:29628 (R;US)

PARTICLE RESUSPENSION
Effects of surface wetness on the behavior of airborne particles, 9:29183 (RA;US)

PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Air Pollution
Air quality criteria for particulate matter and sulfur oxides. Volume 1. Final report, 9:29220 (R;US)
Air quality criteria for particulate matter and sulfur oxides. Volume 3. Final report, 9:29222 (R;US)
Chemical Composition
Formation and transformation of particulate polycyclic organic matter emitted from coal fired power plants and oil shale retorting. Final report, 9:27802 (R;US)
Detection
Void/particulate detector, 9:29021 (P;US)
Diffusion
Transport of gases and particles through poorly mixed interfacial sublayers, 9:29184 (RA;US)
Inhalation
Inhalation of 1-nitropyrene associated with ultrafine insoluble particles or as a pure aerosol: comparison of deposition and biological fate, 9:29508 (J;US)
Sedimentation
Effects of surface wetness on the behavior of airborne particles, 9:29183 (RA;US)

PART-TIME WORK SCHEDULES
See ALTERNATIVE WORK SCHEDULES

PASSIVE SOLAR COOLING SYSTEMS
Passive solar heating, 9:28153 (R;US)

Data Acquisition Systems
Instrumentation selection, installation, verification and calibration at the passive cooling experimental facility for a hot/arid climate, 9:28159 (R;US)
Design
Passive solar design for Arizona, 9:28167 (R;US)
Measuring Instruments
Instrumentation selection, installation, verification and calibration at the passive cooling experimental facility for a hot/arid climate, 9:28159 (R;US)
PASSIVE SOLAR HEATING SYSTEMS
Passive solar heating, 9:28153 (R;US)
Design
Final report on the E-complex building, 9:28149 (R;US)
Pan abode naturally passive solar homes, 9:28147 (R;US)
Passive solar heating and analysis, 9:28161 (R;US)
Passive solar design for Arizona, 9:28167 (R;US)
Solar home show 2, 9:28142 (R;US)
Heat Recovery
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Heat Recovery Equipment
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Hybrid Systems
Analysis of an active charge/passive discharge solar space conditioning system, 9:28175 (R;US)
Load Collector Ratio
Including the effect of control strategy in solar load ratio calculations, 9:28162 (R;US)
Performance
Energy monitoring results of a superinsulated passive solar building, 9:28633 (BA;US)
Iowa Project-Passive. Final report, 9:28146 (R;US)
Pan abode naturally passive solar homes, 9:28147 (R;US)
Solar Fraction
Including the effect of control strategy in solar load ratio calculations, 9:28162 (R;US)
Systems Analysis
Passive solar heating and analysis, 9:28161 (R;US)
Thermal Energy Storage Equipment
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
PASSIVE SOLAR WATER HEATERS
Performance
Iowa Project-Passive. Final report, 9:28146 (R;US)
PATENTS
Use only for items about patents, not for items which are patents.
Bibliographies
DOE patents available for licensing: a bibliography, 9:30059 (R;US)
PATIENTS
Radiation Doses
Dosimetry and quality control in radiodiagnosis, 9:29382 (R;FR;In French)
PDX DEVICES
Research Programs
Annual report, October 1, 1981-September 30, 1982, 9:30014 (R;US)
PEAS
Metabolism
Effects of SO_2 on stomatal metabolism in Pisum sativum L, 9:29507 (J;US)
PEAT
Coring Equipment
Piston corers for peat and lake sediments, 9:29522 (J;US)
Deposits
Peat deposits of North Carolina. Summary and final report, 9:28541 (R;US)

Biological Effects
Effects of androgens and antiandrogens on the induction of mouse skin papillomas by phorbol ester tumor promoters, 9:29494 (RA;US)
Toxicity
Induction and progression of neoplasia in tracheal epithelium, 9:29491 (RA;US)
PHOSPHATES
For salts only; see also PHOSPHORIC ACID ESTERS.
Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
PHOSPHINES
Spin-Lattice Relaxation
Nuclear magnetic relaxation in solids involved by complicated reorientation of methyl group (Triethylphosphine oxide), 9:28866 (RA;PL;In Polish)
PHOSPHORIC ACID
Solvent Properties
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)
PHOSPHORIC ACID ESTERS
Spin-Lattice Relaxation
Application of T_1 relaxation times to studies of intermolecular interactions between Cr/AcAc/$_3$ and ^{31}P atom in ethyl esters of phosphor acids, 9:28913 (RA;PL;In Polish)
PHOSPHORUS
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
PHOSPHORUS 31
Nuclear Magnetic Resonance
Use of T_1 relaxation times and Overhauser effect of ^{13}C and ^{31}P nuclei to study molecules reorientation and intramolecular motions of phosphororganic compounds, 9:28941 (RA;PL;In Polish)
PHOSPHORUS ADDITIONS
Permeability
Environment and fracture ($Fe_{40}Ni_{40}P_{14}B_6$), 9:28763 (R;US)
PHOSPHORUS COMPOUNDS
See also PHOSPHATES
PHOSPHINES
Stimulated Emission
Room-temperature cw operation of InGaAsP/InGaP lasers at 727 nm grown on GaAs substrates by liquid phase epitaxy, 9:29006 (J;US)
PHOTOCHEMICAL OXIDANTS
Biological Effects
Effects of photochemical oxidants on plants, 9:29218 (R;US)
PHOTODETECTORS
Photosensitivity
Pulsed soft x-ray response of InP:Fe photoconductors, 9:28842 (J;US)
Radiation Effects
Radiation effects in optoelectronic devices (Review), 9:29150 (R;US)
PHOTODIODES
Molecular Beam Epitaxy
Irradiation of optimized, MBE grown, AlGaAs/GaAs radiation hardened photodiode, 9:29149 (R;US)
Radiation Effects
Radiation effects in optoelectronic devices (Review), 9:29150 (R;US)
Radiation Hardening
Irradiation of optimized, MBE grown, AlGaAs/GaAs radiation hardened photodiode, 9:29149 (R;US)
PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS
PHOTOELECTROCHEMICAL CELLS
Photoanodes
Photoelectrochemistry at iron oxide electrodes. Final technical report, 9:28070 (R;US)
PHOTON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
PHOTONS
PHOTON-ATOM COLLISIONS
Coherent Radiation
Theoretical atomic and molecular photophysics. Final technical report, October 1, 1981-September 30, 1982, 9:29561 (R;US)
Ionization
Historical survey of resonance ionization spectroscopy, 9:29557 (R;US)

PHOTON-MOLECULE COLLISIONS
Coherent Radiation
Theoretical atomic and molecular photophysics. Final technical report, October 1, 1981-September 30, 1982, 9:29561 (R;US)
Ionization
Fundamental studies of molecular multiphoton ionization, 9:29555 (R;US)
PHOTONS
Structure Functions
Singularities in the perturbative QCD treatment of the photon structure functions, 9:29682 (J;NL)
PHOTONUCLEAR REACTIONS
Absorption
Determination of the total photonuclear absorption cross section for Pb in the Δ-resonance region, 9:29788 (R;FR)
Photoproduction
Measurement of coherent pion-photoproduction on the ^{3}He/^{3}H isodublett, 9:29696 (R;DE)
PHOTOPRODUCTION
Differential Cross Sections
Space-odd spin effects in e^+e^- pair photoproduction with account for nucleus excitation, 9:29602 (RA;SU;In Russian)
PHOTOSYNTHESIS
Investigation of the structure of photosynthetic reaction centers. Final report, June 1, 1981-May 31, 1984, 9:28956 (R;US)
Inhibition
Effects of SO_2 on stomatal metabolism in Pisum sativum L, 9:29507 (J;US)
PHOTOSYNTHETIC REACTION CENTERS
Biochemistry
Protein chemistry and enzyme mechanisms, 9:29340 (RA;US)
Genes
Genetic-physical mapping of a photosynthetic gene cluster in Rhodopseudomonas capsulata, 9:29326 (R;US)
PHOTOTRANSISTORS
Radiation Effects
Radiation effects in optoelectronic devices (Review), 9:29150 (R;US)
PHOTOVOLTAIC CELLS
See also SOLAR CELLS
Materials
Polycrystalline silicon availability for photovoltaic and semiconductor industries, 9:28089 (J;GB)
PHOTOVOLTAIC POWER PLANTS
Computerized Simulation
Effect of photovoltaic systems on utility operations, 9:28097 (R;US)
PHOTOVOLTAIC POWER SUPPLIES
Computerized Simulation
Activities at the Brookhaven National Laboratory integrated test bed for advanced hydrogen technology, 9:28010 (R;US)
Data Analysis
Review and analysis of key findings of the Fifth Photovoltaic Systems Project Integration Meeting, 9:28094 (R;US)
Design
Designing future photovoltaic systems, 9:28096 (R;US)
Performance
Operational and performance experience of selected small- and intermediate-sized photovoltaic systems, 9:28095 (R;US)
Performance Testing
Technical applications of solar energy. Project photovoltaic systems and project selective coatings, 9:28067 (R;DE;In German)
Spectrally Selective Surfaces
Technical applications of solar energy. Project photovoltaic systems and project selective coatings, 9:28067 (R;DE;In German)
Surface Coating
Technical applications of solar energy. Project photovoltaic systems and project selective coatings, 9:28067 (R;DE;In German)
PHYCOBILISOMES
Molecular Structure
Phycobilisome structure of porphyridium cruentum: polypeptide composition, 9:29351 (J;US)
PHYSICAL PROPERTIES
Correlations
Rate of coal hydroliquefaction correlation to coal structure. Quarterly progress report, October-December 1983, 9:27767 (R;US)
PHYSICAL PROTECTION DEVICES
Performance
EASI graphics - Version II, 9:27998 (R;US)
PICEANCE CREEK BASIN
Geology
Assessment of methods of geological basin analysis for application to the Uinta and Piceance Basins, 9:27882 (R;US)
Geophysical Surveys
Assessment of methods of geological basin analysis for application to the Uinta and Piceance Basins, 9:27882 (R;US)
PIG ION SOURCES

See FUEL PINS
PION MINUS REACTIONS
Capture
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Elastic Scattering
Differential cross section for elastic πip helium isotopes scattering, 9:29698 (R;FR)
PION MINUS-PROTON INTERACTIONS
Jet Model
Study on the inclusive charged particle characteristics in jets in π^-p interactions at 40 GeV/c, 9:29604 (R;XJ;In Russian)
Particle Production
Study of the reaction $\pi^-p \rightarrow \pi^+\pi^-n$ at 100 and 175 GeV/c, 9:29622 (J;NL)
PION PLUS REACTIONS
Capture
Isospin dependence of pion absorption on nucleon pairs, 9:29714 (J;US)
Charge-Exchange Reactions
Angular distribution for $^{18}N(\pi^+,\pi^0)^{18}O$(g.s.) at T/sub π/ = 48 MeV p, 9:29737 (J;US)
Coherent Production
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Elastic Scattering
Differential cross section for elastic π^{+-} helium isotopes scattering, 9:29698 (R;FR)
PION REACTIONS
See also PION MINUS REACTIONS
PION PLUS REACTIONS
Capture
Isospin dependence of pion absorption on nucleon pairs at T/sub π/ = 65 MeV, 9:29711 (J;US)
Charge-Exchange Reactions
Core-excitation effects in pion double charge exchange, 9:29756 (J;US)
Elastic Scattering
Core-excitation effects in pion double charge exchange, 9:29756 (J;US)
Inelastic Scattering
Pion-induced monopole transitions, 9:29745 (J;US)
Nuclear Reaction Kinetics
Stopping process of GeV particles in target nuclei, 9:29844 (RA;US)
Particle Production
$(\pi,2\pi)$ reaction and spin-isospin strength distribution in T=0 nuclei, 9:29598 (RA;IL)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS

Electroproduction
(e,e'π) reaction in light nuclei and spin-isospin strength distribution effects, 9:29597 (RA;IL)
Multiple Production
Collective effects in subthreshold pion production, 9:29771 (RA;US)
Particle Production
Coincidence experiments between pions (π/sup +-/) and forward charged particles from intermediate energy heavy ion collisions, 9:29734 (RA;US)
Inclusive measurements of pions and light fragments in 800 MeV/nucleon ^{139}/sub 57/La + ^{139}/sub 57/La collisions, 9:29772 (RA;US)
Pion production from peripheral heavy-ion collisions through coherent isobar and isobaric analog giant resonance formation, 9:29841 (RA;US)
Pion spectra in the reaction Ar + KCl at 1.8 GeV/nucleon, 9:29742 (RA;US)
Subthreshold pion production in nucleus-nucleus collisions - a co-operative process, 9:29840 (RA;US)
Thermal equilibrium in proton induced reactions, 9:29860 (J;US)
Two-pion correlations for 1.2 GeV/nucleon Ar on KCl, 9:29741 (RA;US)

PIONS MINUS
Coherent Production
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Particle Production
Description of correlations between the multiplicities of π^- mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon, 9:29783 (R;SU;In Russian)

PIONS NEUTRAL
Coherent Production
Evidence for neutrino- and antineutrino-induced coherent π^0 production, 9:29617 (J;US)
Photoproduction
Measurement of coherent pion-photoproduction on the ^{3}He/^{3}H isodublett, 9:29696 (R;DE)

PIONS PLUS
Coherent Production
Evidence for the electromagnetic production of the A_1, 9:29612 (J;US)
Leptonic Decay
Search for admixtures of massive neutrinos in the decay $\pi^+ \rightarrow \mu^+ +$nu-bar, 9:29620 (J;US)
Photoproduction
Measurement of coherent pion-photoproduction on the ^{3}He/^{3}H isodublett, 9:29696 (R;DE)

PIPELINES
Design
Transportation and handling of medium Btu gas in pipelines. Final report, 9:28031 (R;US)
Electric Fields
Power line-induced ac potential on natural gas pipelines for complex rights-of-way configurations. Volume 4. Field verification of horizontal wire mitigation method. Final report, 9:28532 (R;US)
Failures
Transportation and handling of medium Btu gas in pipelines. Final report, 9:28031 (R;US)
Maintenance
Transportation and handling of medium Btu gas in pipelines. Final report, 9:28031 (R;US)
Natural Gas Distribution Systems
Power line-induced ac potential on natural gas pipelines for complex rights-of-way configurations. Volume 4. Field verification of horizontal wire mitigation method. Final report, 9:28532 (R;US)
Seismic Effects
Surface faulting and its effect on buried pipelines. Geotechnical engineering report, 9:27880 (R;US)

PIPES
See also DRILL PIPES
Damping
Assessment of structural computer code implementation of PVRC recommended piping damping values (Pressure Vessel Research Committee), 9:28352 (R;US)
Damping in LMFBR pipe systems, 9:28302 (R;US)
Finite Element Method
Friction finite elements numerical analysis of piping systems: theory and applications, 9:28348 (R;FR)
Fracture Mechanics
Assessment of degraded nuclear piping by experimentation and tearing instability fracture mechanics analysis, 9:28467 (J;US)
Friction
Friction finite elements numerical analysis of piping systems: theory and applications, 9:28348 (R;FR)
Heat Transfer
Thermal oscillations downstream of an elbow in stratified pipe flow, 9:28401 (R;US)
Hydraulics
Thermal oscillations downstream of an elbow in stratified pipe flow, 9:28401 (R;US)
Inspection
Evaluation of manual ultrasonic inspection of cast stainless steel piping, 9:29030 (R;US)
Protective Coatings
Control of asbestos fiber loss from asbestos-cement watermain. Final report Oct 80-Jun 82, 9:29309 (R;US)
Shock Absorbers
Shock wave absorber having a deformable liner, 9:29022 (P;US)
Stress Analysis
Friction finite elements numerical analysis of piping systems: theory and applications, 9:28348 (R;FR)
Slideline verification for multilayer pressure vessel and piping analysis including tangential motion (LMFBR), 9:28319 (R;US)
Ultrasonic Testing
Evaluation of manual ultrasonic inspection of cast stainless steel piping, 9:29030 (R;US)

PITTING CORROSION
Corrosion Inhibitors
Influence of sea water pretreatment and flow velocity on the corrosion behaviour of some modified aluminium alloys in North Sea water, 9:28769 (R;DE)

PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS

PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Calibration
Some uncertainties associated with self-calibration of microPIXE analysis, 9:28857 (R;US)
Pulsed Irradiation
PIXE and PBFA II: pulsed x-ray source feasibility study, 9:28002 (R;US)
X-Ray Sources
PIXE and PBFA II: pulsed x-ray source feasibility study, 9:28002 (R;US)

PLANT CELLS
Fluorescence
Three-color fluorescence measurements on single cells excited at three laser wavelengths, 9:29358 (J;US)

PLANTS
See also ALGAE
CACTI
FUNGI
SHRUBS
TREES
WATER HYACINTHS
Noise Pollution Abatement
Mining machinery noise control guidelines, 1983: bureau of mines handbook, 9:27819 (R;US)
Root Absorption
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)

INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
SOLID-STATE PLASMA
Configuration
Reduced equations for nonlinear three-dimensional plasma evolution, 9:29961 (J;US)
Dielectric Properties
Neoclassical dielectric property of a tokamak plasma, 9:29963 (J;US)
Distribution Functions
Variational structure of the Vlasov equation in multidimensional systems, 9:29960 (J;US)
Electric Currents
Formation of a 100-kA tokamak discharge in the Princeton Large Torus by lower hybrid waves, 9:29968 (J;US)
Energy Losses
Plasma energy deposition from the nuclear elastic scattering of tritons on tritons, 9:29953 (R;US)
Equilibrium
Variational structure of the Vlasov equation in multidimensional systems, 9:29960 (J;US)
Ion Waves
Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range, 9:29958 (J;US)
Kink Instability
Excitation of internal kink modes by trapped energetic beam ions, 9:29967 (J;US)
Magnetohydrodynamics
Reduced equations for nonlinear three-dimensional plasma evolution, 9:29961 (J;US)
Nonlinear Problems
Reduced equations for nonlinear three-dimensional plasma evolution, 9:29961 (J;US)
Plasma Heating
Parametric excitation of ion Bernstein waves by a fast wave antenna in the ion cyclotron frequency range, 9:29958 (J;US)
Research Programs
1982 - Annual progress report, 9:29926 (R;FR;In French)
1982. Annual progress report, 9:29582 (R;FR;In French)
Tearing Instability
Numerical solution of the resistive magnetohydrodynamic boundary layer equations, 9:29962 (J;US)
Turbulence
Basic equations for a four-component theory of turbulent magneto-plasmadynamics, 9:29941 (R;DE)
PLASMA ACCELERATORS
See PLASMA GUNS
PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Axisymmetric MHD equilibria with flow, 9:29948 (R;DE)
Comparative Evaluations
General principles of magnetic confinement, 9:29982 (BA;US)
Neutral Atom Beam Injection
Neutral particle beam production and injection, 9:29983 (BA;US)
Technology Assessment
General principles of magnetic confinement, 9:29982 (BA;US)
PLASMA DIAGNOSTICS
Diagnostics of a high current capillary discharge, 9:29954 (R;US)
Alpha Particles
Some considerations concerning fusion alpha particle diagnostics, 9:29943 (R;DE)
Charge Exchange
Charge-exchange cell for the neutral lithium beam probe on pulsator, W7a and ASDEX, 9:29949 (R;DE)
Charged Particles
Particle diagnostics for magnetic fusion experiments, 9:29984 (BA;US)
Interferometry
Interpretation of end-on interferometry in field-reversed configurations, 9:29959 (J;US)
Laser Radiation
Proposal for a new Thomson scattering technique for large fusion devices, 9:29938 (R;DE)
Recent advances in Thomson scattering: high repetition rate Thomson scattering diagnostics on large plasma devices, 9:29937 (R;DE)
Neutral Atom Beam Injection
Charge-exchange cell for the neutral lithium beam probe on pulsator, W7a and ASDEX, 9:29949 (R;DE)
Schlieren Method
Plasmadynamics and neutron production of the POSEIDON plasma focus, 9:29936 (R;DE;In German)
Thomson Scattering
Proposal for a new Thomson scattering technique for large fusion devices, 9:29938 (R;DE)
Recent advances in Thomson scattering: high repetition rate Thomson scattering diagnostics on large plasma devices, 9:29937 (R;DE)
X-Ray Radiography
Observation of Rayleigh-Taylor-like structures in a laser-accelerated foil, 9:29970 (J;US)
X-Ray Spectrometers
High resolution, high rate x-ray spectrometer, 9:29975 (P;US)
VUV instrument calibrations for laser-plasma studies, 9:29921 (R;US)
X-Ray Spectroscopy
Two dimensional x-ray spectroscopy in plasma diagnostics, 9:29931 (RA;IL)
PLASMA FOCUS
Deuterium Tritides
Plasma focus experiments with DT-filled microballoons, 9:29979 (BA;US)
Energy Storage
Energy coupling in the plasma focus, 9:29978 (BA;US)
Explosions
Space-time energy concentration and the design of DT fusion micro-explosions, 9:29976 (BA;US)
Ion Drift
Ion acceleration in the plasma focus, 9:29932 (R;DE)
Magnetohydrodynamics
Two-dimensional magnetohydrodynamic calculations for a 5 MJ plasma focus, 9:29980 (BA;US)
Neutron Emission
Significance of the pinch phase for the neutron production in the plasma focus, 9:29940 (R;DE;In German)
Neutrons
Plasma focus experiments with DT-filled microballoons, 9:29979 (BA;US)
Significance of the pinch phase for the neutron production in the plasma focus, 9:29940 (R;DE;In German)
Relaxation
Self-organisation phenomena in the plasma focus, 9:29934 (R;DE)
Thermonuclear Reactions
Space-time energy concentration and the design of DT fusion micro-explosions, 9:29976 (BA;US)
PLASMA FOCUS DEVICES
Ion Beams
Ion beam production in the plasma focus device, 9:29981 (BA;US)
Neutron Emission
Plasmadynamics and neutron production of the POSEIDON plasma focus, 9:29936 (R;DE;In German)
X Radiation
Plasmadynamics and neutron production of the POSEIDON plasma focus, 9:29936 (R;DE;In German)
PLASMA GUNS
Plasma Production
Recent development in high energy plasma production techniques by the deflagration plasma gun, 9:29977 (BA;US)

See NITRILES
ORGANIC POLYMERS
POLYAMIDES
Environmental Transport
Methodology for modeling the migration of EOR chemicals in fresh water aquifers, 9:27865 (R;US)
POLYCYCLIC AROMATIC AMINES
Carcinogen Screening
Comparative mutagenesis, 9:29341 (RA;US)
Mutagen Screening
Comparative mutagenesis, 9:29341 (RA;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Formation and transformation of particulate polycyclic organic matter emitted from coal fired power plants and oil shale retorting. Final report, 9:27802 (R;US)
Absorption Spectra
Optical studies of polycyclic aromatic hydrocarbons in pyrolysis and diffusion flame environments. Final report, 9:28878 (R;US)
Fluorescence
Optical studies of polycyclic aromatic hydrocarbons in pyrolysis and diffusion flame environments. Final report, 9:28878 (R;US)
Gas Chromatography
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials (Cyano polycyclic aromatic hydrocarbons), 9:27791 (R;US)
Liquid Column Chromatography
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials (Cyano polycyclic aromatic hydrocarbons), 9:27791 (R;US)
Liquid chromatographic separation of aromatic hydrocarbons with chemically bonded (2,4-dinitroanilinopropyl) silica, 9:28893 (J;US)
On-line multidimensional liquid chromatographic determination of polynuclear aromatic hydrocarbons in complex samples, 9:28894 (J;US)
Luminescence
New instruments for plant area and personnel monitoring, 9:28898 (J;US)
Monitoring
New instruments for plant area and personnel monitoring, 9:28898 (J;US)
Mutagen Screening
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials (Cyano polycyclic aromatic hydrocarbons), 9:27791 (R;US)
Supercritical Fluid Chromatography
Supercritical fluid chromatography/supersonic jet spectroscopy. Progress report, February 1-April 30, 1984, 9:27787 (R;US)
Toxicity
Analytical and chromatographic methods for the determination of cyano polycyclic aromatic hydrocarbons in coal-derived materials (Cyano polycyclic aromatic hydrocarbons), 9:27791 (R;US)
Ultraviolet Spectra
On-line multidimensional liquid chromatographic determination of polynuclear aromatic hydrocarbons in complex samples, 9:28894 (J;US)
POLYCYCLIC NITRO COMPOUNDS
Metabolism
Review of the literature on enzymatic reduction of nitrocompounds, 9:29328 (R;US)
Toxicity
Review of the literature on enzymatic reduction of nitrocompounds, 9:29328 (R;US)
POLYESTERS
Fracture Mechanics
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)
Strains
The strain energy release rate of glass fiber-reinforced polyester composite, 9:28818 (BA;US)

POLYETHERS

ZION-2 REACTOR
Containment Buildings
Seismic analysis of a PWR 900 reactor: study of reactor building with soil-structure interaction and evaluation of floor spectra, 9:28357 (R;FR)
Control Rooms
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Corrosive Effects
Temperature dependence of fatigue crack growth rates of A 351 CF8A cast stainless steel in LWR environment, 9:28789 (R;US)
Cost Benefit Analysis
Severe accident risk benchmarking and cost-benefit analysis, 9:28455 (R;US)
Engineered Safety Systems
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Fuel Cans
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Fuel Element Clusters
Irradiation of four pencils fuel element clusters in the periphery of OSIRIS. Qualification of the calculation method by dosimetry, 9:28273 (R;FR;In French)
Fuel Elements
Establishing a PWR burn-up library, 9:28334 (R;DE;In German)
Fuel Rods
Evaluation of power reactor fuel rod analysis capabilities. Phase 2 topical report. Volume 1. Data evaluation, 9:28269 (R;US)
Examination of fuel assembly for water cooled power reactors, 9:28264 (R;AT)

High Burnup PWR Ramp Test Program. Fifth semi-annual progress report, October 1, 1982-March 31, 1983, 9:28405 (R;US)
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)

Fuel-Cladding Interactions
Pellet to cladding interaction modeling with the finite element code TITUS, 9:28274 (R;FR;In French)

HPCI
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS), 9:28447 (R;US)

In Core Instruments
Development of an extended range start-up monitor (ERSM) for boiling water reactions, 9:28368 (J;US)
Position-sensitive fission counter for in-core flux profile monitoring, 9:28376 (J;US)
Testing of a prototype PWR design gamma thermometer for use as a local power monitor in the thimble tube of a nuclear reactor, 9:28374 (J;US)

Loss of Coolant
COBRA/TRAC simulation of semiscale S-UT-5 test, 9:28448 (R;US)
Large break LOCA analyses for two-loop PWRS with upper-plenum injection, 9:28445 (R;US)
OECD-NEA-CSNI/IAEA specialists' meeting on water reactor fuel safety and fission product release in off-normal and accident conditions. Summary report, 9:28421 (R;AT)
Steam-water jet analysis. Final report, 9:28415 (R;US)

Meetings
Scientific research and production introduction studies for light water reactor power plants. Volume 3. dil, 9:28263 (R;CS;CZ)

Personnel
Potential human factors deficiencies in thc design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Review of maintenance personnel practices at nuclear power plants, 9:28271 (R;US)

Pipes
Evaluation of manual ultrasonic inspection of cast stainless steel piping, 9:29030 (R;US)

Pressure Vessels
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)

Primary Coolant Circuits
RELAP/FRAP-T6 analysis of seized and sheared shaft accidents, 9:28399 (R;US)

Radioactivity Transport
Corrosion-product release in light water reactors, 9:28282 (R;US)

Reactor Accidents
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS), 9:28447 (R;US)
Identification of equipment and components predicted as significant contributors to severe core damage, 9:28449 (R;US)
In-plant postaccident radiation transport. Final report, May 1984, 9:28414 (R;US)

Reactor Cooling Systems
Pressurized water reactors, 9:28289 (BA;AT)

Reactor Materials
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)

Reactor Operation
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Licensee event report (LER) compilation. Volume 3, Number 3, 9:28435 (R;US)

Reactor Operators
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)

Reactor Protection Systems
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)

Reactor Safety
French approach to nuclear power safety, 9:28466 (J;US)

Reactor Simulators
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)

Risk Assessment
Severe accident risk benchmarking and cost-benefit analysis, 9:28455 (R;US)

Spent Fuel Storage
Radionuclide release from PWR spent fuel specimens with induced cladding defects, 9:27920 (R;US)

Steam Generators
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)
Dilute chemical cleaning of PWR steam generators off-line cleaning process evaluation, 9:28275 (R;US)
Evaluation of field applications of boric acid in PWR steam generators. Final report, 9:28280 (R;US)
Modeling transients in PWR steam generator units, 9:28463 (J;US)
PWR steam generator chemical-cleaning data base. Volume 1. Final report, 9:28284 (R;US)
PWR steam generator chemical-cleaning data base. Volume 2. Final report, 9:28285 (R;US)
Transient simulation studies for PWR U-tube steam generators. Final report, 9:28281 (R;US)

Steam Systems
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)

Transients
High Burnup PWR Ramp Test Program. Fifth semi-annual progress report, October 1, 1982-March 31, 1983, 9:28405 (R;US)
Nuclear power plant transients: where are we, 9:28406 (R;US)
Pellet to cladding interaction modeling with the finite element code TITUS, 9:28274 (R;FR;In French)

Water Hammer
Evaluation of water hammer occurrence in nuclear power plants: technical findings relevant to unresolved safety issue A-1, 9:28432 (R;US)

PYRENE

Aerosols
Inhalation of 1-nitropyrene associated with ultrafine insoluble particles or as a pure aerosol: comparison of deposition and biological fate, 9:29508 (J;US)

Biological Effects
Inhalation of 1-nitropyrene associated with ultrafine insoluble particles or as a pure aerosol: comparison of deposition and biological fate, 9:29508 (J;US)

Deposition
Inhalation of 1-nitropyrene associated with ultrafine insoluble particles or as a pure aerosol: comparison of deposition and biological fate, 9:29508 (J;US)

PYRIDINE

Solvent Properties
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)

PYRIDINEAZOHYDROXYNAPHTHALENE
See PAN
PYRIDINES
See also ACRIDINES
PAN
PYRIDINE
QUINOLINES
Complexes
Influence of solvent on proton transport in complexes of pyridine alkalines with trifluoroacetic acid, 9:28869 (RA;PL;In Polish)
NMR studies of molecular complexes forming between pyridine bases and t-butyl alcohol, 9:28945 (RA;PL;In Polish)
NMR studies of molecular complexes forming between purine and pyrimidine bases and erythrite tetranitrate, 9:28946 (RA;PL;In Polish)
PYRIDYLAZONAPHTHOL
See PAN
PYRIMIDINES
Complexes
NMR studies of molecular complexes forming between purine and pyrimidine bases and erythrite tetranitrate, 9:28946 (RA;PL;In Polish)
PYRITE
Catalytic Effects
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)
Classification
Petrographic characterization of Kentucky coals. Final report. Part V. Pyrite size/form/microlithotype distribution in western Kentucky prepared coals and in channel samples from western Kentucky and western Pennsylvania, 9:27783 (R;US)
PYRITES
See PYRITE
PYROCARBON
See PYROLYTIC CARBON
PYROCATECHIN
See PYROCATECHOL
PYROCATECHOL
Genetic Effects
Increase of sister chromatid exchanges and perturbations of cell division kinetics in human lymphocytes by benzene metabolites, 9:29511 (J;US)
PYROLYTIC CARBON
Chemical Vapor Deposition
Ultra-thin carbon films for high energy plasma generation, 9:28854 (J;US)
Fabrication
Ultra-thin carbon films for high energy plasma generation, 9:28854 (J;US)
PYROMETERS
Calibration
Thermocouple simulation: a calibration technique, 9:29155 (R;US)

Q

QUAD CITIES-1 REACTOR
Switches
Failure evaluation of General Electric SB-1 and SB-9 reactor mode switches, 9:28270 (R;US)
QUAD CITIES-2 REACTOR
Fuel Element Clusters
Nuclear design and core operation for the first irradiation cycle of the large-scale zirconium barrier fuel demonstration at Quad Cities 2, 9:28261 (R;US)
QUADRUPOLE LINACS
Beam Optics
RFQ radial matching sections and fringe fields, 9:29071 (R;US)
Computerized Simulation
RFQ simulation code, 9:29073 (R;US)
Electric Fields
RFQ radial matching sections and fringe fields, 9:29071 (R;US)
Hydrogen 1 Minus Beams
Design, fabrication, and testing of the BNL radio frequency quadrupole accelerator, 9:29057 (R;US)
Performance
Early operating experience with the Brookhaven National Laboratory radio frequency quadrupole accelerator, 9:29092 (R;US)
Polarized Beams
Design, fabrication, and testing of the BNL radio frequency quadrupole accelerator, 9:29057 (R;US)
Reviews
Introduction to RFQ session, 9:29064 (R;US)
Specifications
Operational parameters of a 2.0-MeV RFQ linac, 9:29070 (R;US)
QUALITY ASSURANCE
Manuals
Quality Assurance (QA) procedures for computer software in Department 1510, 9:30084 (R;US)
Systems Analysis
Evaluation of the reports on the status of quality assurance systems in the power plants. Pt. 1, annex, pt. 2, 9:28393 (R;DE;In German)
QUALITY CONTROL
X-Ray Radiography
Use of a medical tomodensimeter in quality control, 9:29027 (R;FR;In French)
QUANTUM CHROMODYNAMICS
Applied chromodynamics, 9:29674 (R;US)
Unusual initial and final state effects in quantum chromodynamics. Progress report, 9:29629 (R;US)
Hadrons
Hadronic wave functions and high momentum transfer interactions in quantum chromodynamics, 9:29686 (BA;US)
Infrared Divergences
Hadron-hadron collisions at extreme energies: Light-cone QCD with an axial-vector anomaly current and an infrared fixed point, 9:29637 (J;US)
Lattice Field Theory
Theoretical high energy physics. Progress report, May 1, 1983-April 30, 1984, 9:29627 (R;US)
Mass Formulae
Mass inequalities in quantum chromodynamics, 9:29679 (J;US)
Momentum Transfer
Hadronic wave functions and high momentum transfer interactions in quantum chromodynamics, 9:29686 (BA;US)
Monte Carlo Method
Numerical calculations in quantum field theories, 9:29657 (R;US)
Reviews
Quantitative non-Monte Carlo methods for low-energy QCD, 9:29624 (R;DE)
Singularity
Singularities in the perturbative QCD treatment of the photon structure functions, 9:29682 (J;NL)
Supersymmetry
Supercomplimentarity in massless supersymmetric QCD, 9:29683 (J;NL)
Wave Functions
Hadronic wave functions and high momentum transfer interactions in quantum chromodynamics, 9:29686 (BA;US)
QUANTUM ELECTRODYNAMICS
Test of quantum electrodynamics using the reaction $e^+e \rightarrow \gamma\gamma$ at $\sqrt{s} = 29$ GeV, 9:29588 (R;US)
Gauge Invariance
Hamiltonian formulation of QED in the superaxial gauge, 9:29665 (R;BR)
Hamiltonians
Hamiltonian formulation of QED in the superaxial gauge, 9:29665 (R;BR)
QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
PHI4-FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS

QUANTUM FLAVORDYNAMICS
QUANTUM GRAVITY
Numerical calculations in quantum field theories, 9:29657 (R;US)
Gauge Invariance
Numerical studies of gauge field theories, 9:29684 (BA;US)
Strong magnetic field in spontaneously broken gauge theories, 9:29678 (J;US)
Unified Gauge Models
Numerical studies of gauge field theories, 9:29684 (BA;US)
QUANTUM FLAVORDYNAMICS
Unified Gauge Models
Flavor mixings and flavor unifications, 9:29652 (BA;US)
QUANTUM GRAVITY
Free Energy
Finite temperature effects of quantum gravity, 9:29893 (R;IT)
QUANTUM MECHANICS
Comments on microscopic mechanics, generalizations of classical mechanics and Planck's oscillators, 9:29896 (R;IT)
Eigenstates
Coarse grained description of time evolution: Irreversible state reduction and time-energy relation, 9:29898 (R;IT)
Equations of Motion
Supersymmetric particles in N=2 superspace: phase space variables and Hamilton dynamics, 9:29889 (R;IT)
Hidden Variables
Hidden variables and locality in quantum theory, 9:29907 (R;CA)
Uncertainty Principle
Coarse grained description of time evolution: Irreversible state reduction and time-energy relation, 9:29898 (R;IT)
Time-energy uncertainty relation and irreversibility in quantum mechanics, 9:29895 (R;IT)
QUARK CONFINEMENT
See BAG MODEL
QUARK MATERIAL
See QUARK MATTER
QUARK MATTER
Central collisions of heavy ions in the dual parton model, 9:29850 (RA;US)
Do light fermions destroy the confinement/deconfinement phase transition, 9:29854 (RA;US)
Hydrodynamical aspects of ultrarelativistic heavy ion collisions, 9:29845 (RA;US)
Partons in nuclear collisions before recombination, 9:29849 (RA;US)
Pion radiation by hot quark-gluon plasma, 9:29853 (RA;US)
Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV, 9:29775 (RA;US)
Transverse expansion at central rapidities in ultra-relativistic heavy ion collisions, 9:29846 (RA;US)
Strangeness
Strangeness and phase changes in hot hadronic matter, 9:29852 (RA;US)
QUARK PLASMA
See QUARK MATTER
QUARK SEA
See QUARK MATTER
QUARK-GLUON PLASMA
See QUARK MATTER
QUARKONIUM
A hypothetical bound state of quark and antiquark.
Fine Structure
Fine- and hyperfine structure analysis of heavy quarkonia: (banti b)- and (tanti t)-states, 9:29648 (J;NL)
Hyperfine Structure
Fine- and hyperfine structure analysis of heavy quarkonia: (banti b)- and (tanti t)-states, 9:29648 (J;NL)
QUARKS
Particle Identification
Fractional charge search at the Bevalac, 9:29794 (RA;US)
Rest Mass
Fine- and hyperfine structure analysis of heavy quarkonia: (banti b)- and (tanti t)-states, 9:29648 (J;NL)
QUARTZ
Compression Strength
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Equations of State
Shock-wave experiments at threefold compression, 9:28799 (J;US)
Shock Waves
Shock-wave experiments at threefold compression, 9:28799 (J;US)
QUASARS
Star Evolution
X-ray emission and cosmological evolution of quasars, 9:29538 (RA;IL)
QUASI-FISSION
Nuclear Models
Dissipative phenomena: fusion, fast fission and quasifission, 9:29804 (R;FR)
QUENCHING
Pressure Dependence
Pressure effects on wall heat transfer during flame quenching, 9:29019 (R;US)
QUERCUS
See OAKS
QUINOLINES
Biological Accumulation
Usefulness of the lipid index for biouptake studies with Daphnia magna, 9:29499 (R;US)
QUINONES
Genetic Effects
Increase of sister chromatid exchanges and perturbations of cell division kinetics in human lymphocytes by benzene metabolites, 9:29511 (J;US)

R

RADIATION ACCIDENTS
Emergency Plans
Summary of parameters affecting the release and transport of radioactive material from an unplanned incident, 9:27968 (R;US)
RADIATION DETECTION
See also CHARGED PARTICLE DETECTION
COSMIC RAY DETECTION
NEUTRON DETECTION
Reviews
Neutron techniques in safeguards, 9:28000 (J;GB)
RADIATION DETECTORS

DIELECTRIC TRACK DETECTORS
EMANOMETERS
IONIZATION CHAMBERS
POSITION SENSITIVE DETECTORS
SCINTILLATION COUNTERS
SEMICONDUCTOR DETECTORS
SHOWER COUNTERS
TRANSITION RADIATION DETECTORS
Evaluation
Study of the counting stability and efficiencies of radon chamber counters, 9:29117 (RA;US)
RADIATION DOSIMETRY
See DOSIMETRY
RADIATION HYGIENE
See RADIATION PROTECTION
RADIATION PROTECTION
Nuclear safety, Volume 24, No. 5. Technical progress review, Septembter-October 1983, 9:28456 (R;US)
Personnel
Manpower trends and training requirements for radiation protection personnel in the DOE contractor system, 9:29440 (R;US)
Training
Manpower trends and training requirements for radiation protection personnel in the DOE contractor system, 9:29440 (R;US)

RADIATION SAFETY
See RADIATION PROTECTION
RADICALS
Not to be used for compound descriptions.
See also HYDROXYL RADICALS
Chemical Reactions
Aspects of reaction of N-oxide radical with ethers in ^{13}C NMR spectrum, 9:28929 (RA;PL;In Polish)
Chemical Shift
Aspects of reaction of N-oxide radical with ethers in ^{13}C NMR spectrum, 9:28929 (RA;PL;In Polish)
Laser Spectroscopy
Spectroscopy and structures of reactive intermediates in flames with far-infrared lasers. Final report, 9:28972 (R;US)
Spectral Shift
Contact shifts ^{23}Na NMR of sodium cation solvated by N-oxide radical, 9:28865 (RA;PL;In Polish)
RADIOACTIVE AEROSOLS
Research Programs
Summary report on research and development work carried out in 1982, 9:28423 (R;DE;In German)
RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Gamma Spectra
Rapid determination of noble gas radionuclide concentrations in power reactor plumes, 9:29249 (J;GB)
Plumes
Rapid determination of noble gas radionuclide concentrations in power reactor plumes, 9:29249 (J;GB)
Standards
Control technology alternatives and costs for compliance: elemental phosphorus plants. Final report, 9:29251 (R;US)
RADIOACTIVE GASEOUS WASTES
See GASEOUS WASTES
RADIOACTIVE WASTES
RADIOACTIVE MATERIALS
See also FISSION PRODUCTS
RADIOACTIVE WASTES
Absorption Spectroscopy
Long path length temperature-controlled absorption cell for spectroscopic studies of radioactive compounds, 9:28883 (J;US)
RADIOACTIVE PARTICULATES

RADIOACTIVE TRACERS
See RADIOPHARMACEUTICALS
RADIOACTIVE WASTE DISPOSAL
Alpha-Bearing Wastes
Management and disposal of alpha-contaminated wastes: a survey of current practices, strategies and R and D activities in some EC countries and the USA, 9:27948 (R;US)
Bibliographies
Bibliography of reports by US Geological Survey personnel on studies of underground nuclear test sites and on waste management studies at the Nevada Test Site and the Waste Isolation Pilot Plant site, New Mexico, January 1 to December 31, 1982, 9:27960 (R;US)
Containers
High integrity containers: a demonstrated disposal alternative to solidification of radioactive wastes, 9:27942 (R;US)
Environmental Impacts
Polonium-210 in the environment around a radioactive waste disposal area and phosphate ore processing plant, 9:27978 (J;GB)
Geochemistry
EQ3/6 geochemical modeling task plan for Nevada Nuclear Waste Storage Investigations (NNWSI), 9:27958 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)
Granites
Geomechanics in hard rock mining-Lessons from two case histories, 9:27966 (J;US)
High-Level Radioactive Wastes
Delphi analysis of radionuclide release scenarios for a nuclear waste repository at the Hanford site, Washington state: initial iteration, 9:27976 (R;US)
Economic impacts of waste emplacement configuration for the proposed nuclear waste repository at the Nevada Test Site, 9:27954 (R;US)
Low-Level Radioactive Wastes
Low-level waste ocean disposal program. Annual technical progress report, June 1982-June 1983. Volume I. Summary (Decommissioned nuclear-powered submarines), 9:27956 (R;US)
Methodology for selecting low-level radioactive waste disposal sites with application to the Oak Ridge Reservation (Shallow land burial), 9:27936 (R;US)
Organic geochemical studies at a commercial shallow-land disposal site of low-level nuclear waste, 9:27952 (R;US)
Prediction parameters of radionuclide retention at low-level radioactive waste sites, 9:27973 (R;US)
Marble
Geomechanics in hard rock mining-Lessons from two case histories, 9:27966 (J;US)
Mill Tailings
Field performance assessment of synthetic liners for uranium tailings ponds: a status report, 9:27949 (R;US)
Palo Duro Basin
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Radioactive Waste Disposal
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Radionuclide Migration
Delphi analysis of radionuclide release scenarios for a nuclear waste repository at the Hanford site, Washington state: initial iteration, 9:27976 (R;US)
Prediction parameters of radionuclide retention at low-level radioactive waste sites, 9:27973 (R;US)
Site Selection
Evaluation of crystalline rock as a medium for isolation of high-level waste, 9:27962 (J;US)
Evaluation of salt as a medium for isolation of high-level waste, 9:27963 (J;US)
Formation pressure data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27933 (R;US)
Identification of characteristics which influence repository design domal salt, Task 1. Final report, 9:27944 (R;US)
Methodology for selecting low-level radioactive waste disposal sites with application to the Oak Ridge Reservation (Shallow land burial), 9:27936 (R;US)
Oil and gas well data file - Palo Duro Basin, Texas and New Mexico: unanalyzed data, 9:27932 (R;US)
Permeability data base: Palo Duro Basin - Texas, Oklahoma, and New Mexico - unanalyzed data, 9:27931 (R;US)
Thickness of Knox Group overburden on Central Chestnut Ridge, Oak Ridge Reservation, 9:27947 (R;US)
Well completion report - Harman No. 1 (PD-8) well, Palo Duro Basin, Texas: unanalyzed data, 9:27928 (R;US)
Well completion report - dissolution zone water wells (PD-8, PD-11, PD-12, PD-13), Palo Duro Basin, Texas: unanalyzed data, 9:27926 (R;US)
Tuff
EQ3/6 geochemical modeling task plan for Nevada Nuclear Waste Storage Investigations (NNWSI), 9:27958 (R;US)
Underground Disposal
Delphi analysis of radionuclide release scenarios for a nuclear waste repository at the Hanford site, Washington state: initial iteration, 9:27976 (R;US)
Identification of characteristics which influence repository design domal salt, Task 1. Final report, 9:27944 (R;US)
RADIOACTIVE WASTE FACILITIES
Configuration
Economic impacts of waste emplacement configuration for the proposed nuclear waste repository at the Nevada Test Site (Vertical and horizontal configuration), 9:27954 (R;US)
Design
Identification of characteristics which influence repository design domal salt, Task 1. Final report, 9:27944 (R;US)

Personnel
NNWSI repository worker radiation exposure. Volume I. Spent fuel and high-level waste operations in a geologic repository in tuff, 9:27957 (R;US)
Revegetation
Environmental conditions of two abandoned uranium mill tailings sites in northern Saskatchewan, 9:27969 (R;DE)
RADIOACTIVE WASTE MANAGEMENT
Economic Analysis
Economic analysis of waste management alternatives for reprocessing wastes, 9:27951 (R;US)
Research Programs
Department of Energy Low-Level Waste Management Program, 9:27946 (RA;US)
Low-level Waste Research and Development Program, 9:27945 (RA;US)
Spent Fuels
Integrated cask storage systems for storage, transportation, and disposal of spent nuclear fuel, 9:27923 (R;US)
RADIOACTIVE WASTE PROCESSING
Treatment and disposal of tritiated effluents. Technology and safety, 9:27924 (R;DE;In German)
High-Level Radioactive Wastes
Recent progress in actinide and lanthanide solvent extraction, 9:27935 (R;FR)
Low-Level Radioactive Wastes
Licensing requirements for backfit incinerators at commercial nuclear power plants, 9:27940 (R;US)
Waste form development program. Annual report, October 1982-September 1983, 9:27934 (R;US)
Solidification
Microstructural characterization of nuclear waste ceramics, 9:27965 (BA;US)
Waste form development program. Annual report, October 1982-September 1983, 9:27934 (R;US)
Vitrification
Characterization of borosilicate glass containing Savannah River Plant radioactive waste, 9:27964 (BA;US)
RADIOACTIVE WASTE STORAGE
See also MONITORED RETRIEVABLE STORAGE
Treatment and disposal of tritiated effluents. Technology and safety, 9:27924 (R;DE;In German)
Alpha-Bearing Wastes
TMI abnormal wastes disposal options, 9:27943 (R;US)
High-Level Radioactive Wastes
NNWSI repository worker radiation exposure. Volume I. Spent fuel and high-level waste operations in a geologic repository in tuff, 9:27957 (R;US)
Tuff
NNWSI repository worker radiation exposure. Volume I. Spent fuel and high-level waste operations in a geologic repository in tuff, 9:27957 (R;US)
RADIOACTIVE WASTES

RADIOINDUCTION
Time Dependence
Age and dose as determinants of times of appearance of radium-induced osteosarcomas in humans, 9:29420 (RA;US)
RADIOISOTOPE BATTERIES
Manufacturing
Control system for glassing hot presses, 9:28005 (R;US)
Meetings
Advanced nuclear systems for portable power in space. Final report, 9:28328 (R;US)
RADIOISOTOPE HEAT SOURCES
Aerodynamics
APL/JHU free flight tests of the General Purpose Heat Source module. Testing: 5-7 March 1984, 9:28003 (R;US)
Fabrication
^{238}Pu fuel form processes. Final report, January-September 1983, 9:28004 (R;US)
Mound Laboratory isotopic power fuels programs: April-June, 1967. AEC research and development report, 9:28006 (R;US)
RADIOISOTOPE KINETICS
See RADIONUCLIDE KINETICS
RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION
RADIOISOTOPE SCANNERS
Design
Evaluation of synchrotron x-rays for digital subtraction coronary angiography, 9:29396 (J;US)
RADIOISOTOPE-LABELLED DRUGS
See RADIOPHARMACEUTICALS
RADIOISOTOPES
See also ALPHA DECAY RADIOISOTOPES
BETA DECAY RADIOISOTOPES
BONE SEEKERS
Metabolism
Unified approach to age-dependent metabolic modeling, 9:29453 (J;GB)
Valence
Comparison of analytical charge-form and equilibrium thermodynamic speciation of certain radionuclides, 9:29303 (R;US)
RADIOLOGICAL PERSONNEL
Radiation Protection
Measurements and considerations concerning the application of X-rays under particular consideration of the X-radiation regulations, 9:29433 (R;DE;In German)
RADIOLOGICAL PROTECTION
See RADIATION PROTECTION
RADIOMETRIC ANALYSIS
Research Programs
Quality engineering and control. Annual progress report, January-December 1981, 9:28882 (R;US)
RADIONUCLIDE DISTRIBUTIONS
See RADIONUCLIDE KINETICS
RADIONUCLIDE KINETICS
For radionuclides in living organisms only; see also TRANSLOCATION.
Age Dependence
Unified approach to age-dependent metabolic modeling, 9:29453 (J;GB)
Biological Models
Unified approach to age-dependent metabolic modeling, 9:29453 (J;GB)
Temperature Effects
Biokinetics of inhaled ^{244}Cm oxide in the rat: effect of heat treatment at 1150°C, 9:29455 (J;GB)
RADIONUCLIDE METABOLISM
See RADIONUCLIDE KINETICS
RADIONUCLIDE MIGRATION
In environment.
Pacific Northwest Laboratory annual report for 1983 to the DOE Office of Energy Research. Part 2. Ecological sciences, 9:29274 (R;US)
Statistical and quantitative research, 9:29276 (RA;US)
Inhibition
Reduction of radiostrontium mobility in acid soils by carbonate treatment, 9:29280 (J;US)
Interpolation
Continued fraction interpolation, 9:27977 (R;US)
Research Programs
Earth sciences, 9:29273 (RA;US)
Risk Assessment
Delphi analysis of radionuclide release scenarios for a nuclear waste repository at the Hanford site, Washington state: initial iteration, 9:27976 (R;US)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIONUCLIDE TRANSFER (IN ORGANISMS)
See RADIONUCLIDE KINETICS
RADIONUCLIDE TURNOVER
See RADIONUCLIDE KINETICS
RADIONUCLIDES
See RADIOISOTOPES
RADIOPHARMACEUTICALS
Evaluation
In vivo comparison of 16α-[^{77}Br]bromoestradiol-17β and 16α-[^{125}I]Iodoestradiol-17β, 9:29397 (J;US)
RADIORESISTANCE
See RADIOSENSITIVITY
RADIOSENSITIVITY
Biological Variability
Mammalian cytogenetics, 9:29444 (RA;US)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Evaluation
Localization and therapeutic potential of tritiated tetracycline in rodent tumors, 9:29398 (J;US)
Spinocellular carcinoma of the lip, effects of radiotherapy. 109 case studies of the Dept. of Radiology of the Dermatological Clinic of Univ. Muenchen, 9:29389 (R;DE;In German)
Planning
Radiotherapy of tumors of the salivary glands, 9:29384 (R;DE;In German)
Side Effects
^{211}At radiocolloid therapy: further observations and comparison with radiocollocis of ^{32}P, ^{165}Dy, and ^{90}Y, 9:29458 (J;US)
RADIUM
Health Hazards
Risks of cancers of selected sites among female radium dial workers, 9:29422 (RA;US)
RADIUM 226
Biological Half-Life
Unusual case of radium exposure, 9:29425 (RA;US)
Inhalation
Unusual case of radium exposure, 9:29425 (RA;US)
Radioecological Concentration
^{226}Ra and ^{228}Ra in Illinois municipal well waters, 9:29285 (RA;US)
Scintillation Counting
Determination of ^{226}Ra volume activity in waters, 9:28863 (R;CS;In Czech)
RADIUM 228
Biological Half-Life
Non-stochastic effects of ^{226}Ra and ^{228}Ra in the human skeleton, 9:29423 (RA;US)
Relative activities of ^{212}Bi (thorium-C) and ^{228}Ra (mesothorium-1) in former radium dial workers, 9:29426 (RA;US)
Health Hazards
Environmental Research Division annual report: Center for Human Radiobiology, July 1982-June 1983, 9:29418 (R;US)
Isotope Ratio
Relative activities of ^{212}Bi (thorium-C) and ^{228}Ra (mesothorium-1) in former radium dial workers, 9:29426 (RA;US)
Radioecological Concentration
^{226}Ra and ^{228}Ra in Illinois municipal well waters, 9:29285 (RA;US)
RADIUM F
See POLONIUM 210
RADON 222
Adsorption
Passive, integrated measurement of indoor radon using activated carbon, 9:29139 (J;GB)
Radiation Detectors
Study of the counting stability and efficiencies of radon chamber counters, 9:29117 (RA;US)
RADON MONITORS
See EMANOMETERS
RAFT RIVER VALLEY
Resistivity Surveys
Resistivity measurements before and after injection Test 5 at Raft River KGRA, Idaho. Final report, 9:28209 (R;US)
RAIN
See also ACID RAIN
Chemical Composition
Nutrient budgets and internal cycling of N, P, K, Ca, and Mg in conventional tillage, no-tillage and old-field ecosystems on the Georgia piedmont, 9:29265 (J;US)
RAIN WATER
Water Chemistry
Effects of cloud dynamics on cloud-water acidification, 9:29179 (RA;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
RANCHO SECO-1 REACTOR
Auxiliary Water Systems
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Control Rooms
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Emergency Plans
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Reactor Instrumentation
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
Shielding
Comparison of implementation of selected TMI action plan requirements on operating plants designed by Babcock & Wilcox, 9:28332 (R;US)
RANKINE CYCLE POWER SYSTEMS
Materials Testing
T-111 rankine system corrosion test loop. Volume II, 9:28327 (R;US)
Working Fluids
Determination of thermal-degradation rates of some candidate Rankine-cycle organic working fluids for conversion of industrial waste heat into power, 9:28670 (R;US)
RARE EARTH COMPOUNDS
See also YTTERBIUM COMPOUNDS
M1-Transitions
Direct calculation of the probabilities of magnetic dipole transitions for the three-valent rare earth ions in the crystalline electric field with hexagonal symmetry, 9:28914 (R;XJ;In Russian)
RARE EARTH NUCLEI
For nuclear properties of rare earths.

EUROPIUM
LANTHANUM
LUTETIUM
NEODYMIUM
PRASEODYMIUM
YTTERBIUM

Solvent Extraction
Evidence and consequences of inner sphere hydrogen bonding between ligands in some mixt complexes of actinide and lanthanide, 9:28967 (R;FR)
Recent progress in actinide and lanthanide solvent extraction, 9:27935 (R;FR)

RARE GASES
See also ARGON
HELIUM
KRYPTON
NEON
XENON
Energy Levels
Evolution of energy bands in rare-gas fluids, 9:29566 (RA;IL)
Mass Spectroscopy
Isotopically selective counting of noble gas atoms, using resonance ionization spectroscopy, 9:29559 (R;US)
Radioecological Concentration
Rapid determination of noble gas radionuclide concentrations in power reactor plumes, 9:29249 (J;GB)

RATE STRUCTURE
Cost Benefit Analysis
Interdisciplinary approach to cost/benefit analysis of innovative electric rates, 9:28505 (J;NL)
Evaluation
Interdisciplinary approach to cost/benefit analysis of innovative electric rates, 9:28505 (J;NL)

RATS
Radionuclide Kinetics
Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983, 9:29439 (R;US)

RDF
See REFUSE DERIVED FUELS

REACTIVATION
See REGENERATION

REACTOR ACCIDENTS
See also LOSS OF COOLANT
MELTDOWN
REACTOR CORE DISRUPTION
TRANSIENT OVERPOWER ACCIDENTS
Aerosols
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Computerized Simulation
Note on parallel processing techniques for algebraic equations, ordinary differential equations and partial differential equations, 9:28452 (R;US)
Emergency Plans
In-plant considerations for off-site emergency response to reactor accidents, 9:28459 (J;GB)
Nuclear energy, public health and public policy, 9:28458 (J;GB)
Fires
Turbulent natural convection in an enclosure, 9:28395 (R;FR)
Fission Product Release
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)
In-plant postaccident radiation transport. Final report, May 1984, 9:28414 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
TREAT light water reactor source term experiments program, 9:28404 (R;US)
Fluid-Structure Interactions
Dynamic structural analysis of a head assembly for a large loop-type LMFBR, 9:28403 (R;US)
Heat Transfer
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Use of a heat transfer coefficient for describing the radiactive exchange between water vapour and the bounding walls. Final report, 9:28454 (R;US)
Hydraulics
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Use of a heat transfer coefficient for describing the radiactive exchange between water vapour and the bounding walls. Final report, 9:28454 (R;US)
Mathematical Models
Att rapportera stralningsmaetdata (reporting of indication data), 9:29311 (R;US)
Meltdown
Identification of equipment and components predicted as significant contributors to severe core damage, 9:28449 (R;US)
Mitigation
Mitigative techniques and analysis of generic site conditions for ground-water contamination associated with severe accidents, 9:28446 (R;US)
Radiation Hazards
In-plant postaccident radiation transport. Final report, May 1984, 9:28414 (R;US)
Radioactive Aerosols
Aerosol release and transport program. Quarterly progress report, July-September 1983, 9:28440 (R;US)
Radioactivity Transport
In-plant postaccident radiation transport. Final report, May 1984, 9:28414 (R;US)
Reactor Core Disruption
Identification of equipment and components predicted as significant contributors to severe core damage, 9:28449 (R;US)
Research Programs
Sandia Laboratories studies 'coolability' of nuclear fuel under Nuclear Regulatory Commission's fuel-damage program, 9:28460 (J;US)
Risk Assessment
Analysis of dependent failures in risk assessment and reliability evaluation, 9:28469 (J;US)
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
Simulation
Investigation of the physical and numerical foundations of two-fluid representation of sodium boiling with applications to LMFBR experiments, 9:28428 (R;US)
Sandia Laboratories studies 'coolability' of nuclear fuel under Nuclear Regulatory Commission's fuel-damage program, 9:28460 (J;US)
TREAT light water reactor source term experiments program, 9:28404 (R;US)
System Failure Analysis
Analysis of dependent failures in risk assessment and reliability evaluation, 9:28469 (J;US)
Thermal Shock
Decay of buoyancy driven stratified layers with applications to Pressurized Thermal Shock (PTS) (PWR), 9:28447 (R;US)

REACTOR CHANNELS
Passage through the reactor.
See also FUEL CHANNELS
Flow Blockage
Experimental study of the diversion cross-flow caused by subchannel blockages. Volume 1. Single-phase flow, 9:28413 (R;US)

REACTOR COMPONENTS
See also BREEDING BLANKETS
FUEL ELEMENTS
REACTOR CHANNELS
REACTOR COOLING SYSTEMS

REACTOR INTERNALS
Activity Levels
ACFA - a versatile activation code for coolant and structural materials, 9:28353 (R;DE)
Hydrodynamics
Hydrodynamic mass, 9:28351 (R;US)
Materials Testing
Compilation of contract research for the Materials Engineering Branch, Division of Engineering Technology. Annual report for FY 1983. Vol.2, 9:28354 (R;US)

Mechanical Structures
Strategy to compute plastic post-buckling of structures, 9:28347 (R;FR)
Mechanical Vibrations
Hydrodynamic mass, 9:28351 (R;US)
Meetings
Pressurized water reactors, 9:28289 (BA;AT)
Research Programs
Compilation of contract research for the Materials Engineering Branch, Division of Engineering Technology. Annual report for FY 1983. Vol.2, 9:28354 (R;US)

REACTOR CONTROL SYSTEMS
Algorithms
Critical function monitoring system algorithm development, 9:28371 (J;US)
Closed-Loop Control
Digital control of power transients in a nuclear reactor, 9:28380 (J;US)
Computerized Simulation
Nuclear system test simulator, 9:28370 (J;US)
Data Analysis
Methodology for validation of safety parameters and fault detection and isolation, 9:28362 (R;US)
Design
A new start-up range neutron monitor, 9:28372 (J;US)
Critical function monitoring system algorithm development, 9:28371 (J;US)
Digital control of power transients in a nuclear reactor, 9:28380 (J;US)
On-Line Control Systems
Digital control of power transients in a nuclear reactor, 9:28380 (J;US)
Technology Assessment
A new start-up range neutron monitor, 9:28372 (J;US)
Transfer Functions
Use of frequency response criteria in self tuning controller cost function specification, 9:28367 (R;US)

REACTOR COOLING SYSTEMS
See also PRIMARY COOLANT CIRCUITS
Activity Levels
ACFA - a versatile activation code for coolant and structural materials, 9:28353 (R;DE)
Failure Mode Analysis
Pressurized water reactors, 9:28289 (BA;AT)

REACTOR CORE DISRUPTION
After-Heat Removal
Post-accident heat removal research: A state of the art review, 9:28427 (R;DE)
Criticality
Analysis of thermal propagation during a hypothetical core disruptive accident in a LMFBR reactor, 9:28424 (R;DE;In German)
Hydraulics
Analysis of thermal propagation during a hypothetical core disruptive accident in a LMFBR reactor, 9:28424 (R;DE;In German)
Correlation for downward melt penetration into a miscible low-density substrate, 9:28398 (R;US)
Phase Transformations
Correlation for downward melt penetration into a miscible low-density substrate, 9:28398 (R;US)

REACTOR CORES
After-Heat Removal
Sandia Laboratories studies 'coolability' of nuclear fuel under Nuclear Regulatory Commission's fuel-damage program, 9:28460 (J;US)
Meetings
Fast breeder physics and nuclear core design, 9:28335 (R;DE;In German)
Research Programs
Fast breeder physics and nuclear core design, 9:28335 (R;DE;In German)

REACTOR DISMANTLING
Cost
Closing down and dismantling of research - material testing - and teaching reactors, 9:28429 (R;DE;In German)
Radiation Protection
Closing down and dismantling of research - material testing - and teaching reactors, 9:28429 (R;DE;In German)
Radioactive Wastes
Closing down and dismantling of research - material testing - and teaching reactors, 9:28429 (R;DE;In German)

REACTOR FUEL ELEMENTS

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS
Aging
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
Chemical Radiation Effects
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
Computerized Simulation
Nuclear system test simulator, 9:28370 (J;US)
Design
A new start-up range neutron monitor, 9:28372 (J;US)
Electric Cables
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
Electronic Equipment
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
Neutron Monitors
An analytical response model of neutron sensors used in reactor instrumentation, 9:28375 (J;US)
Analysis of random neutron sensor fluctuations for surveillance of nuclear instrumentation channels in nuclear power plant protection systems, 9:28378 (J;US)
Physical Radiation Effects
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
Semiconductor Devices
Aging of electronics with application to nuclear power plant instrumentation, 9:28377 (J;US)
Technology Assessment
A new start-up range neutron monitor, 9:28372 (J;US)
Validation
Validation of plant-wide data and fault identification at steady-state, 9:28360 (R;US)

REACTOR INTERNALS
Performance
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)

REACTOR LICENSING
Operating reactors licensing actions summary. Vol. 4, No. 3, 9:28330 (R;US)
Legal Aspects
Reactor licensing procedure, 9:28329 (R;DE;In German)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS
Aging
Effect of thermal and irradiation aging simulation procedures on polymer properties, 9:28442 (R;US)
Corrosion
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report (PWR), 9:28279 (R;US)
Creep
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)

Embrittlement
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)
Fatigue
Advanced Gas Cooled Nuclear Reactor Materials Evaluation and Development Program. Monthly management status report, May 1983, 9:28290 (R;US)
Fracture Properties
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
Materials Testing
Compilation of contract research for the Materials Engineering Branch, Division of Engineering Technology. Annual report for FY 1983. Vol.2, 9:28354 (R;US)
Mechanical Properties
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Physical Properties
Literature search on mechanical and physical properties of cladding materials for advanced pressurized water reactors (APWR) at high temperatures, 9:28286 (R;DE;In German)
Physical Radiation Effects
Development of materials for higher burn-up rates, 9:28314 (RA;DE;In German)
Effect of thermal and irradiation aging simulation procedures on polymer properties, 9:28442 (R;US)
Heavy-Section Steel Technology Program: five-year plan, FY 1983-1987, 9:28267 (R;US)
LWR pressure vessel surveillance dosimetry improvement program. Volume 2. Quarterly progress report, April-June 1983, 9:28266 (R;US)
State-of-the-art in cladding materials development for the SNR reference concept - critical materials problems, 9:28313 (RA;DE;In German)
Research Programs
Compilation of contract research for the Materials Engineering Branch, Division of Engineering Technology. Annual report for FY 1983. Vol.2, 9:28354 (R;US)
Thermal Stresses
Effect of thermal and irradiation aging simulation procedures on polymer properties, 9:28442 (R;US)
REACTOR OPERATORS
Certification
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
Decision Making
Critical function monitoring system algorithm development, 9:28371 (J;US)
Performance
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Reliability
Safety-related operator actions: methodology for developing criteria, 9:28441 (R;US)
Training
Methods for implementing revisions to emergency operating procedures. Final report, 9:28443 (R;US)
Nuclear power plant simulators for operator licensing and training. Part I. The need for plant-reference simulators. Part II. The use of plant-reference simulators, 9:28365 (R;US)
REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Homogeneous and heterogeneous reactor cores: Characteristic neutron-physical properties, critical experiments, 9:28339 (RA;DE;In German)
Computer Calculations
Neutronics codes, 9:28338 (RA;DE;In German)
Group Constants
Nuclear data: Measurements, files and cross sections, 9:28337 (RA;DE;In German)
International Cooperation
Requirements concerning nuclear calculation methods and how they are to be met by a common R+D programme, 9:28336 (RA;DE;In German)
Meetings
Fast breeder physics and nuclear core design, 9:28335 (R;DE;In German)
Research Programs
Fast breeder physics and nuclear core design, 9:28335 (R;DE;In German)
REACTOR PROTECTION SYSTEMS
Control Systems
Potential human factors deficiencies in the design of local control stations and operator interfaces in nuclear power plants, 9:28364 (R;US)
Neutron Monitors
The high voltage perturbation technique for testing the response of neutron sensors of the type used in nuclear reactors, 9:28379 (J;US)
Performance
Realistic simulation of severe accidents in BWRs - computer modeling requirements, 9:28437 (R;US)
REACTOR SAFETY
Nuclear safety, Volume 25, No. 1. Technical progress review, January-February 1984, 9:28457 (R;US)

FLOTATION
PRECIPITATION SCAVENGING
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
SEQUESTRENE
See EDTA
SEQUOYAH NUCLEAR POWER PLANT UNIT-1
See SEQUOYAH-1 REACTOR
SEQUOYAH NUCLEAR POWER PLANT UNIT-2
See SEQUOYAH-2 REACTOR
SEQUOYAH-1 REACTOR
Radioactive Waste Storage
Sequoyah Nuclear Plant low-level radwaste storage facility ground-water pathway analysis, 9:28385 (R;US)
SEQUOYAH-2 REACTOR
Radioactive Waste Storage
Sequoyah Nuclear Plant low-level radwaste storage facility ground-water pathway analysis, 9:28385 (R;US)
SESAME OIL
Toxicity
Early embryonic lethality induced by seed oils in female mice treated prior to insemination, 9:29482 (RA;US)
SEWAGE SLUDGE
Combustion Products
Analysis and assessment of incinerated municipal sludge ashes and leachates. Final report, Oct 79-Sep 81, 9:29497 (R;US)
Fluidized-Bed Combustion
Solid waste trial for coal-burning process, 9:28052 (J;US)
Incinerators
Analysis and assessment of incinerated municipal sludge ashes and leachates. Final report, Oct 79-Sep 81, 9:29497 (R;US)

SEX CHROMOSOMES
See HETEROCHROMOSOMES
SGHWR REACTOR
Primary Coolant Circuits
High-temperature electromagnetic filtration on the primary circuit of the Winfrith 100-MW nuclear plant, 9:28293 (R;US)
SHAFT EXCAVATIONS
See also MINE SHAFTS
Underground Explosions
Method for making generally cylindrical underground openings, 9:28991 (P;US)
SHAFTS
Seals
Dual rotating shaft seal apparatus, 9:28990 (P;US)
SHALE OIL
Chemical Analysis
1-alkenes as potential indicators of sediment shale oil contamination, 9:27890 (J;US)
Oil Yields
Oil shale, tar sand, and underground coal gasification. Quarterly progress report, October-December 1983, 9:27883 (R;US)
Quantitative Chemical Analysis
On-line multidimensional liquid chromatographic determination of polynuclear aromatic hydrocarbons in complex samples, 9:28894 (J;US)
SHALES
Dissolution
Behavior of trace refractory minerals in the lithium metaborate fusion-acid dissolution procedure, 9:28886 (J;US)
Melting
Behavior of trace refractory minerals in the lithium metaborate fusion-acid dissolution procedure, 9:28886 (J;US)
SHEARER LOADERS
Dusts
Longwall mining dust control. Technical progress report No. 26, September 1-30, 1983, 9:27812 (R;US)
SHEATHS (FUEL)
See FUEL CANS
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Decontamination
Shippingport station decommissioning project: decommissioning plan. Volume No. 5, 9:28276 (R;US)
SHIPS
See also NUCLEAR SHIPS
Coal-Fired Gas Turbines
A modern alternative to oil-fired ships, 9:28709 (J;US)
Diesel Engines
A modern alternative to oil-fired ships, 9:28709 (J;US)
Economic Analysis
Western US steam coal exports to the Pacific Basin: port and marine task group, 9:27823 (R;US)
Global Aspects
Western US steam coal exports to the Pacific Basin: port and marine task group, 9:27823 (R;US)
SHOCK ABSORBERS
Design
Shock wave absorber having a deformable liner, 9:29022 (P;US)
Shock wave absorber having apertured plate, 9:28989 (P;US)
Liquid Flow
Shock wave absorber having apertured plate, 9:28989 (P;US)
SHOCK WAVES
Wave Propagation
Shock propagation through the Cascade ICF reactor Li_2O-pebble blanket, 9:30037 (J;US)
SHOREHAM REACTOR
Reactor Operation
Safety evaluation report related to the operation of Shoreham Nuclear Power Station, Unit No. 1 (Docket No. 50-322). Suppl. 5, 9:28430 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Shoreham Nuclear Power Station, Unit No. 1 (Docket No. 50-322). Suppl. 5, 9:28430 (R;US)
SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Data Acquisition Systems
The design of the data acquisition system for a very large bismuth germanate calorimeter, 9:29141 (J;US)
Design
The design of the data acquisition system for a very large bismuth germanate calorimeter, 9:29141 (J;US)
Energy Resolution
Bismuth germanate (bgo) optimisation for energy resolution and purity, 9:29142 (J;US)
SHRUBS
Fire Resistance
Western semi-arid ecosystems, 9:29256 (RA;US)
SI SEMICONDUCTOR DETECTORS
Design
Task A. Study of large P/sub T/ direct photon production at the ISR. Task B. Direct photon production at the tevatron (E-706). Task C. Search for fractional charge particles in semiconductors. Progress report, June 1, 1983-May 31, 1984, 9:29589 (R;US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA MODEL
Conservation Laws
Hamiltonian structures of some non-linear evolution equations, 9:29664 (R;IT)
Hamiltonian Function
Hamiltonian structures of some non-linear evolution equations, 9:29664 (R;IT)
SILANES
Sorptive Properties
On-line multidimensional liquid chromatographic determination of polynuclear aromatic hydrocarbons in complex samples, 9:28894 (J;US)
SILICA
Abundance
Thermal data for springs and wells, 9:28220 (RA;US)
Catalytic Effects
Iron alloy Fischer-Tropsch catalysts. 4. Reaction and selectivity studies of the FeCo system, 9:28038 (J;US)
Decomposition
Analysis of vapor formation from silica under coal combustion conditions, 9:27833 (R;US)
Fluorination
Nuclear magnetic resonance investigation of fluorinated oxide catalysts, 9:28963 (J;US)
Sorptive Properties
Liquid chromatographic separation of aromatic hydrocarbons with chemically bonded (2,4-dinitroanilinopropyl) silica, 9:28893 (J;US)
SILICA GEL
Moisture
Moisture transport in silica gel particle beds, 9:28177 (R;US)
SILICON
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Availability
Polycrystalline silicon availability for photovoltaic and semiconductor industries, 9:28089 (J;GB)
Charged-Particle Transport
Projection factors of the ranges of low energy ions, 9:29870 (R;DE;In German)
Edge Dislocations
Oxygen precipitation on CZ silicon dislocations: thermodynamic analysis and stability, 9:28827 (R;FR;In French)

Energy Absorption
Direct measurement of the polarization dependence of Si(111)2 x 1 surface-state absorption by use of photothermal displacement spectroscopy, 9:28847 (J;US)
Ion Implantation
Influence of implantation conditions on defect formation in silicon, 9:28832 (RA;UA;In Russian)
Market
Polycrystalline silicon availability for photovoltaic and semiconductor industries, 9:28089 (J;GB)
Physical Radiation Effects
Defects induced by annealing or irradiation in CZ silicon or germanium, 9:28731 (R;FR)
Influence of implantation conditions on defect formation in silicon, 9:28832 (RA;UA;In Russian)
Spectra of primary displaced atoms in semiconductor caused by cosmic-ray protons, 9:28831 (RA;UA;In Russian)
Production
Polycrystalline silicon availability for photovoltaic and semiconductor industries, 9:28089 (J;GB)
Surface Finishing
Direct measurement of the polarization dependence of Si(111)2 x 1 surface-state absorption by use of photothermal displacement spectroscopy, 9:28847 (J;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

SILICON 28 TARGET
Pion Reactions
Pion-induced monopole transitions, 9:29745 (J;US)

SILICON ALLOYS
Corrosion Resistance
Behavior of Ni-Cr-Si coating alloys in Na_2SO_4, V_2O_5, and mixed salt hot corrosion. Final report, 9:287 5 (R;US)
Physical Radiation Effects
Amorphization through irradiation with the fission fragments of a Pd-Si alloy, 9:28801 (TJ;US)

SILICON CARBIDES
Erosion
Erosion behavior of hard surface coatings/inserts, 9:28813 (BA;US)
Ion Implantation
Alteration of surface properties by ion implantation, 9:28811 (BA;US)
Opacity
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
Oxidation
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
Surface Coating
Erosion behavior of hard surface coatings/inserts, 9:28813 (BA;US)
Surface Properties
Alteration of surface properties by ion implantation, 9:28811 (BA;US)

SILICON FLUORIDES
Catalytic Effects
Nuclear magnetic resonance investigation of fluorinated oxide catalysts, 9:28963 (J;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Phase Studies
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)

SILICON OXIDES
See also QUARTZ
SILICA
Coatings
AR coating with high damage threshold on SiO_2 glass. Final report, 9:30026 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Carrier Lifetime
Emitter recombination and minority carrier lifetime measurements on high efficiency Si solar cells, 9:28081 (R;US)
Cost
Recent developments in low cost silicon solar cells for terrestrial application, 9:28091 (J;US)
Efficiency
Emitter recombination and minority carrier lifetime measurements on high efficiency Si solar cells, 9:28081 (R;US)
Electric Contacts
Improved photovoltaic cells and electrodes, 9:28088 (P;US)
Encapsulation
Integral assembly of photovoltaic arrays using glass, 9:28090 (J;US)
Materials
Polycrystalline silicon availability for photovoltaic and semiconductor industries, 9:28089 (J;GB)
Performance
Mechanisms limiting performance in polycrystalline silicon solar cells, 9:28068 (R;US)
Mechanisms limiting the performance of large grain polycrystalline silicon solar cells, 9:28069 (R;US)
Recombination
Emitter recombination and minority carrier lifetime measurements on high efficiency Si solar cells, 9:28081 (R;US)
Mechanisms limiting performance in polycrystalline silicon solar cells, 9:28068 (R;US)
Mechanisms limiting the performance of large grain polycrystalline silicon solar cells, 9:28069 (R;US)
Technology Assessment
Recent developments in low cost silicon solar cells for terrestrial application, 9:28091 (J;US)

SILICONES
Evaluation
Hydrogel modified materials surfaces for the ERDA artificial heart. Final report , 9:29412 (R;US)
Fabrication
Silicone cushions for engineering applications, 9:28846 (J;US)

SILOXANES
See also SILICONES
Gas Chromatography
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)
Infrared Spectra
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)
Mass Spectra
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)
Quantitative Chemical Analysis
Organic analysis with a combined capillary gas chromatograph/mass spectrometer/Fourier transform infrared spectrometer, 9:28895 (J;US)

SILVER
Surface Properties
Internal state distributions of molecules scattering and desorbing from surfaces, 9:28775 (RA;AT)
Trace Amounts
Marine sciences, 9:29290 (RA;US)
Uranium 238 Reactions
Angular correlations between target and projectile fragments emitted from ^{238}U + Ag(Br) collisions at 0.85 A GeV, 9:29773 (RA;US)

SIMS
See MASS SPECTROSCOPY

SIMULATORS (REACTOR)
See REACTOR SIMULATORS

SINGLE CELL PROTEIN
Production
Reactional studies on the formation of protein from cellulose waste, 9:29400 (R;DE;In German)
SINGLE-LEVEL RESONANCE FORMULA
See BREIT-WIGNER FORMULA
SISTER CHROMATID EXCHANGES
Measuring Methods
Interaction of Hoechst 33258 and BrdU substituted DNA in the formation of sister chromatid exchanges, 9:29367 (J;DE)
SKELETON
Carcinomas
Recent cases of radium-induced malignancy, 9:29419 (RA;US)
Radionuclide Kinetics
Plutonium partitioning among internal organs, 9:29454 (J;GB)
Sarcomas
Recent cases of radium-induced malignancy, 9:29419 (RA;US)
SKIN
Neoplasms
Dosimetry of PAH in skin carcinogenesis, 9:29493 (RA;US)
SKIN ABSORPTION
Biological Models
In vitro studies of cutaneous toxicity and chemical-skin interactions, 9:29378 (RA;US)
SLAGS
Chemical Composition
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Viscosity of coal slags as a function of composition, temperature, and oxygen partial pressure, 9:27712 (R;US)
Viscosity
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
Viscosity of coal slags as a function of composition, temperature, and oxygen partial pressure, 9:27712 (R;US)
SLC
See STANFORD LINEAR COLLIDER
SLIGHTLY ENRICHED URANIUM
0 - 5 per cent.
Accounting
Acceptance criteria for the low enriched uranium reform amendments, 9:27996 (R;US)
Nuclear Materials Management
Acceptance criteria for the low enriched uranium reform amendments, 9:27996 (R;US)
SLUDGES
See also SEWAGE SLUDGE
Stabilization
Stabilization of power plant by-product storage sites for building development. Final report, 9:27799 (R;US)
Waste Processing
Study about the practicability of thermal treatment of paint sludge and the state of present waste management and disposal technology, 9:28669 (R;DE;In German)
SLUGS (FUEL)
See FUEL RODS
SLURRIES (FUEL)
See FUEL SLURRIES
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Small-scale hydroelectric power: a brief assessment, 9:28055 (R;US)
Economic Analysis
Economic appraisal of small-scale hydro power projects, 9:28056 (R;US)
Technology Assessment
New technology for small hydropower installations, 9:28059 (R;US)
SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE
SMOG
Photochemistry
Effects of photochemical oxidants on plants, 9:29218 (R;US)
SMOKES
Chemical Composition
Chemical characterization of selected military obscurants, 9:29201 (R;US)
SNOW
Isotope Ratio
Existence of a kinetic isotopic fractionation effect at snow formation, 9:29519 (R;FR;In French and English)
SNR REACTOR
See SNR-1 REACTOR
SNR-1 REACTOR
Prior to 1977, SNR REACTOR was used.
Fuel Elements
Irradiation experiments on operational transients behaviour, 9:28317 (RA;DE;In German)
Fuel Pins
Fuel pin requirements and design, 9:28310 (RA;DE;In German)
Irradiation Procedures
Irradiation experiments on operational transients behaviour, 9:28317 (RA;DE;In German)
Risk Assessment
Risk-oriented analysis on the German prototype fast breeder reactor SNR-300, 9:28462 (J;US)
Transients
Irradiation experiments on operational transients behaviour, 9:28317 (RA;DE;In German)
SNR-2 REACTOR
Fuel Pins
Fuel pin requirements and design, 9:28310 (RA;DE;In German)
Reactor Physics
SNR-2 reactor: Design, state, trends and methods, 9:28343 (RA;DE;In German)
SNR-300 REACTOR
See SNR-1 REACTOR
SOCIO-ECONOMIC FACTORS
Mathematical Models
Impacts of acid deposition on regional economic activity, 9:28510 (R;US)
SODIUM
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Compatibility
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
Corrosive Effects
Perspective of the corrosive behavior of lithium and sodium, 9:28735 (R;US)
Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
Excitation
Two-states close-coupling electron excitation cross-sections of sodium, 9:29564 (RA;IL)
Neon 20 Reactions
Inclusive K^+-production in the model of transport theory for high-energy nucleus-nucleus collisions, 9:29743 (RA;US)
SODIUM 23
Nuclear Magnetic Resonance
Contact shifts ^{23}Na NMR of sodium cation solvated by N-oxide radical, 9:28865 (RA;PL;In Polish)
Screening of ^{23}Na nuclei in $NaNO_3$ and $NaClO_3$ crystals, 9:28904 (RA;PL;In Polish)
SODIUM 23 TARGET
Proton Reactions
Study of the (p,α)-reaction on sd-shell nuclei and their microscopic analysis, 9:29739 (R;DE;In German)
SODIUM 24
Beta-Minus Decay
Precision measurement of the asymmetry coefficient in the β-γ-angular correlation in ^{24}Na, 9:29740 (R;DE;In German)
SODIUM CHLORIDES
Physical Radiation Effects
Internal friction changes in NaCl at 77 K, 9:28843 (J;US)
SODIUM CITRATES
See CITRATES
SODIUM COMPOUNDS
SODIUM COMPOUNDS
See also BORAX
ROCHELLE SALT

SODIUM CHLORIDES
SODIUM NITRATES
SODIUM SULFATES

NMR Spectra
Screening of ^{23}Na nuclei in $NaNO_3$ and $NaClO_3$ crystals, 9:28904 (RA;PL;In Polish)

SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS

SODIUM MINERALS
See MINERALS

SODIUM NITRATES
Corrosive Effects
Corrosion of 316SS and IN800 in molten $NaNO_3$ - KNO_3, 9:28800 (J;US)

SODIUM SULFATES
Corrosive Effects
Electrochemical investigations on the corrosion of gas turbine materials in sulfate melts with and without superimposed mechanical stress, 9:28773 (R;DE;In German)

SOILS
Carbon
Worldwide organic soil carbon and nitrogen data, 9:29260 (R;US)
Ion Exchange
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29268 (J;US)
Leaching
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29230 (J;US)
Evaluation of simulated acid precipitation effects on forest microcosms. Final report, 9:29208 (R;US)
Liquefaction
Site liquefaction analyses (Newman, KY; risk assessment), 9:27755 (RA;US)
Nitrogen
Worldwide organic soil carbon and nitrogen data, 9:29260 (R;US)
PH Value
Terrestrial ecology, 9:29188 (RA;US)
Stabilization
Stabilization of power plant by-product storage sites for building development. Final report, 9:27799 (R;US)

SOLAR ABSORBERS
Performance Testing
Technical utilization of solar energy - conversion of solar to thermal energy, solar cooling and thermal energy storage, 9:28140 (R;DE;In German)

SOLAR ACCESS
Prior to September 1980 this concept was indexed to SOLAR RIGHTS.
Solar access ordinances in the northwest, 9:28065 (R;US)

SOLAR AIR CONDITIONERS
See also SOLAR-ASSISTED HEAT PUMPS
Desiccants
Experimental study of the performance of a laminar flow silica gel desiccant packing suitable for solar air conditioning application, 9:28178 (R;US)
Design
Solar system for a solar cooled school building in a subtropical region. Final report, 9:28152 (R;US)
Packed Bed
Experimental study of the performance of a laminar flow silica gel desiccant packing suitable for solar air conditioning application, 9:28178 (R;US)
Performance
Page Jackson solar school, Charles Town, West Virginia. Final technical report, 9:28160 (R;US)
Performance evaluation of an active solar cooling system utilizing low cost plastic collectors and an evaporatively-cooled absorption chiller. Final report, 9:28148 (R;US)

SOLAR AIR CONDITIONING
Desiccants
Development of a laminar flow desiccant bed for solar air conditioning application, 9:28179 (R;US)
Moisture transport in silica gel particle beds, 9:28177 (R;US)
Packed Bed
Development of a laminar flow desiccant bed for solar air conditioning application, 9:28179 (R;US)
Moisture transport in silica gel particle beds, 9:28177 (R;US)

SOLAR AIR HEATERS
Construction
Build your own solar air heater, 9:28100 (R;US)
Small active solar units for window installation. Summary and evaluation report, 9:28184 (R;US)
Design
Multiple uses of solar air in ethanol production. Summary report, 9:28182 (R;US)
Small active solar units for window installation. Summary and evaluation report, 9:28184 (R;US)
Latent Heat Storage
Solar heat storage in phase change material, 9:28189 (R;US)

SOLAR BATTERIES
See SOLAR CELL ARRAYS

SOLAR CELL ARRAYS
Comparative Evaluations
Comparison of concentrating collectors to tracking flat panels, 9:28080 (R;US)
Encapsulation
Integral assembly of photovoltaic arrays using glass, 9:28090 (J;US)
Solar Tracking
Comparison of concentrating collectors to tracking flat panels, 9:28080 (R;US)

SOLAR CELLS
See also CADMIUM SULFIDE SOLAR CELLS
CASCADE SOLAR CELLS
CONCENTRATOR SOLAR CELLS
COPPER SULFIDE SOLAR CELLS
SILICON SOLAR CELLS
Electric Contacts
Laser-assisted solar cell metallization processing. Quarterly report, December 13, 1983-March 12, 1984, 9:28072 (R;US)
Laser Beam Machining
Laser-assisted solar cell metallization processing. Quarterly report, December 13, 1983-March 12, 1984, 9:28072 (R;US)
Pyrolysis Products
Laser-assisted solar cell metallization processing. Quarterly report, December 13, 1983-March 12, 1984, 9:28072 (R;US)

SOLAR COLLECTORS
See also FLAT PLATE COLLECTORS
SOLAR AIR HEATERS
SOLAR PONDS
Construction
Mobil home solar collector, 9:28185 (R;US)
Standards
Standards for solar energy devices in Arizona, 9:28186 (R;US)

SOLAR CONCENTRATORS
Design
New concentrators for the generation of very high temperatures from solar energy. Final technical report, 9:28181 (R;US)
Performance
New concentrators for the generation of very high temperatures from solar energy. Final technical report, 9:28181 (R;US)

SOLAR COOLING SYSTEMS
See also PASSIVE SOLAR COOLING SYSTEMS
SOLAR AIR CONDITIONERS
Performance
Performance criteria for solar heating and cooling systems in commercial buildings, 9:28164 (R;US)
Standards
Performance criteria for solar heating and cooling systems in commercial buildings, 9:28164 (R;US)

SOLAR ENERGY
Commercialization
New Mexico residential solar rate initiatives. Final report, 9:28062 (R;US)
Contract Management
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Materials
Materials aspects of solar energy use in buildings, 9:28163 (R;US)

Rate Structure
New Mexico residential solar rate initiatives. Final report, 9:28062 (R;US)
Technology Transfer
Shandiin/DOE intertribal energy programs: technology transfer series, 9:28064 (R;US)
Training
Shandiin Institute inter-tribal solar training program, 9:28063 (R;US)

SOLAR SPACE HEATING
Space heating with active solar energy systems, 9:28143 (R;US)

SOLAR SYSTEM EVOLUTION
Galactic cycles and their relationship to life on earth, 9:29532 (R;US)

SOLAR THERMAL CONVERSION
Use for overviews of solar thermal program.
Bibliographies
Selected bibliography of solar thermal literature. Volume 1: bibliography, 9:28101 (R;US)
Selected bibliography of solar thermal literature. Volume 2: indexes, 9:28102 (R;US)

SOLAR THERMAL TEST FACILITY
See CENTRAL RECEIVER TEST FACILITY

SOLAR WATER HEATERS
See also PASSIVE SOLAR WATER HEATERS
Computerized Simulation
Solar/gas water heater characterization and development. Final report, November 81-Jun 83, 9:28169 (R;US)
Consumer Guides
Notes on home-type solar hot water economics, 9:28127 (R;US)
Solar water heating for Arizona homes, 9:28168 (R;US)
Control Systems
Effects of control sensor drift on annual SDHW system performance, 9:28172 (R;US)
Design
Nuuanu YMCA solar water-heating project (Engineering Materials), 9:28141 (E;US)
Solar system for a solar cooled school building in a subtropical region. Final report, 9:28152 (R;US)
Economic Analysis
Investigation of means for lowering costs of active solar hot water/space heating systems, 9:28174 (R;US)
Economics
Notes on home-type solar hot water economics, 9:28127 (R;US)
Field Tests
Analysis of field test data from domestic solar water heaters in the southern United States, period through March, 1983, 9:28145 (R;US)
Latent Heat Storage
Heat storage units using a salt hydrate as storage medium based on the extra water principle, 9:28170 (R;US)
Maintenance
Assessment of historical R & M data for SDHW systems, 9:28171 (R;US)
Performance
Analysis of field test data from domestic solar water heaters in the southern United States, period through March, 1983, 9:28145 (R;US)
Performance Testing
Low-Cost Batch Solar Water Heater Research and Development Project: results from extended field

monitoring. Final report, January 1, 1983-May 15, 1983, 9:28166 (R;US)
Nuuanu YMCA solar water-heating project (Engineering Materials), 9:28141 (E;US)
Reliability
Assessment of historical R & M data for SDHW systems, 9:28171 (R;US)
Thermosyphons
Nuuanu YMCA solar water-heating project (Engineering Materials), 9:28141 (E;US)
SOLAR WIND
Shock Heating
Electron velocity distributions near interplantary shocks, 9:29551 (J;US)
SOLAR-ASSISTED HEAT PUMPS
Design
Demonstration of solar/hydrothermal energy system in the Montgomery County Animal Shelter, 9:28154 (R;US)
Performance
Seasonal storage solar heating system for the Charlestown, Boston Navy Yard National Historic Park, 9:28188 (R;US)
Seasonal Thermal Energy Storage
Seasonal storage solar heating system for the Charlestown, Boston Navy Yard National Historic Park, 9:28188 (R;US)
SOLID CLUSTERS
Crystal-Phase Transformations
Experimentally observed effects of transient fluctuational electron transitions and phase and polymorphic transformations in small volumes of solids, 9:29880 (RA;IL)
SOLID FUELS
See also MIXED OXIDE FUELS
Combustion
Properties of three dimensional energetic solids and molecular crystals. Annual technical report No. 3, 1 Jul-31 Dec 83, 9:28971 (R;US)
SOLID SCINTILLATION DETECTORS
Physical Radiation Effects
Performance of BGO in a high radiation environment, 9:29151 (R;US)
SOLID WASTES
See also MINERAL WASTES
WOOD WASTES
Stabilization
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)
Waste Disposal
Ash pond cost study (Comparison: hazardous materials vs nonhazardous materials), 9:27739 (RA;US)
Genetic engineering and the development of new pollution control technologies. Final report, 9:29261 (R;US)
SOLIDS
Frequency Analysis
Frequency spectrum of an elastic Sierpinski gasket, 9:28984 (R;US)
SOLID-STATE PLASMA
Electric Currents
Observation of chaotic behavior in an electron-hole plasma in Ge, 9:29884 (J;US)
Fluctuations
Observation of chaotic behavior in an electron-hole plasma in Ge, 9:29884 (J;US)
SOLITONS
Hamiltonians
Hamiltonian structure U(p,q) of nonlinear Schroedinger equation with nonvanishing boundary equations, 9:29906 (R;XJ;In Russian)
SOLVENT EXTRACTION
See also PHENOSOLVAN PROCESS
Relative importance of diffusion and chemical reactions in liquid-liquid extraction kinetics, 9:28885 (J;US)
SOLVENT-REFINED COAL
Chemical Analysis
1-alkenes as potential indicators of sediment shale oil contamination, 9:27890 (J;US)
SOLVENT-REFINED COAL PROCESS
See SRC PROCESS
SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SRC PROCESS
SOOT
Chemical Reaction Yield
Ionic mechanisms of carbon formation in flames. Annual report 1 Apr 81-31 Mar 82, 9:28970 (R;US)
SOUND
See SOUND WAVES
SOUND WAVES
See also ULTRASONIC WAVES
Wave Propagation
Finite element method for treating nearly one way wave propagation, 9:29887 (R;US)
SOUTH CAROLINA
Houses
Field observations of moisture and organism damage in insulated houses, 9:28627 (BA;US)
SOUTH DAKOTA
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOVIET UNION
See USSR
SOYBEAN PLANT
See GLYCINE HISPIDA
SPACE FLIGHT
Personnel Dosimetry
Use of personal, real time in-cabin dosimetry on space shuttle flights, 9:29124 (R;US)
SPACE HVAC SYSTEMS
Heating, ventilation, and air conditioning systems.
Air Infiltration
Parameters affecting air infiltration and air tightness in thirty-one east Tennessee homes, 9:28571 (R;US)
Computerized Control Systems
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
Computerized Simulation
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
On-Line Control Systems
Dynamic modeling for microprocessor thermal control of buildings using identification techniques, 9:28609 (BA;US)
SPACE POWER REACTORS
See also SPACE PROPULSION REACTORS
Fabrication
Refractory alloy component fabrication, 9:28326 (RA;US)
Materials
Potential refractory alloy requirements for space nuclear power applications, 9:28323 (RA;US)
SP-100 Program overview, 9:28322 (RA;US)
Materials Testing
Compatibility of refractory alloys with space reactor system coolants and working fluids, 9:28325 (RA;US)
Refractory alloy component accomplishments from 1963 to 1972, 9:28324 (RA;US)
Meetings
Advanced nuclear systems for portable power in space. Final report, 9:28328 (R;US)
Refractory alloy technology for space nuclear power applications, 9:28320 (R;US)
Research Programs
Origin and organization of the SP-100 program, 9:28321 (RA;US)
SPACE PROPULSION REACTORS
Meetings
Advanced nuclear systems for portable power in space. Final report, 9:28328 (R;US)
SPACE SHUTTLES
Flight Testing
Shuttle flight test of an advanced gamma-ray detection system. Final scientific report 1 Oct 82-31 Mar 83, 9:29115 (R;US)
Gamma Spectrometers
Shuttle flight test of an advanced gamma-ray detection system. Final scientific report 1 Oct 82-31 Mar 83, 9:29115 (R;US)

SPACE VEHICLE COMPONENTS
Shielding
Multi-element x-ray shields for spacecraft. Final report 1981-1983, 9:29867 (R;US)
SPACE-TIME
See also LIGHT CONE
Metrics
Gauge and non-gauge curvature tensor copies, 9:29888 (R;IT)
SPARK IGNITION ENGINES
Combustion Control
EPA (Environmental Protection Agency) evaluation of the optimizer device under Section 511 of the Motor Vehicle Information and Cost Savings Act, 9:28718 (R;US)
Fuel Economy
Evaluation of the Fuel Maximiser tm: a retrofit fuel economy device. Technical report, 9:28705 (R;US)
Fuel Substitution
Research and development of alcohol fuel usage in spark ignited engines. Monthly progress report, April 1984, 9:28720 (R;US)
Operation
Partial-load optimized Otto-engine, 9:28703 (R;DE;In German)
SPEAR
Stanford positron-electron asymmetric ring.
Beam Focusing Magnets
Proposed mini beta insertion for spear, 9:29075 (R;US)
SPECIAL RELATIVITY THEORY
See RELATIVITY THEORY
SPECIFIC HEAT
Temperature Dependence
Subcontracted R and D task summary report: coal, KMAC, and slag physical properties, 9:27757 (R;US)
SPECTRA (NEUTRON)
See NEUTRON SPECTRA
SPECTRALLY SELECTIVE SURFACES
Optical Properties
Technical applications of solar energy. Project photovoltaic systems and project selective coatings, 9:28067 (R;DE;In German)
Vapor Deposited Coatings
Technical applications of solar energy. Project photovoltaic systems and project selective coatings, 9:28067 (R;DE;In German)
SPECTROCHEMISTRY
See ABSORPTION SPECTROSCOPY
EMISSION SPECTROSCOPY
SPECTROPHOTOMETERS
Calibration Standards
Circular dichroism microspectrophotometer, 9:29157 (J;US)
SPENT FUEL CASKS
Integrated cask storage systems for storage, transportation, and disposal of spent nuclear fuel, 9:27923 (R;US)
Impact Tests
Evaluation of computer programs used for structural analyses of impact response of spent fuel shipping casks, 9:28986 (R;US)
Shielding
Gamma ray benchmark on the spent fuel shipping cask TN 12, 9:28982 (R;FR)
SPENT FUEL ELEMENTS
Fission Product Release
Data summary report for fission product release test HI-3, 9:28359 (R;US)
SPENT FUEL STORAGE
See also DRY STORAGE
MONITORED RETRIEVABLE STORAGE
Fission Product Release
Radionuclide release from PWR spent fuel specimens with induced cladding defects, 9:27920 (R;US)
Forecasting
Spent fuel storage requirements. An update of DOE/RL-83-1 (Through 1993), 9:27916 (R;US)
Radiation Monitoring
Radiation dosimetry and monitoring for a test of geologic storage of spent nuclear fuel, 9:27984 (R;US)
Underground Storage
NNWSI repository worker radiation exposure. Volume I. Spent fuel and high-level waste operations in a geologic repository in tuff, 9:27957 (R;US)
SPENT FUELS
Testing
Nuclear fuel and cladding transient testing, 9:27901 (R;US)
Transport
CASMO: a computer program to calculate spent fuel and high-level waste transportation mileage and costs, 9:27918 (R;US)
Transportation Systems
Advanced transportation system options for spent fuel and high-level waste, 9:27922 (R;US)
SPENT SHALES
Environmental Effects
Development of a geotechnical stabilization plan for the existing retorted shale pile, Anvil Points, Colorado. Final report, 9:27892 (R;US)
Stabilization
Development of a geotechnical stabilization plan for the existing retorted shale pile, Anvil Points, Colorado. Final report, 9:27892 (R;US)
SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOGENESIS
Daily Variations
Circadian rhythms of spermatogonial stem cells, 9:29449 (RA;US)
Synchronization
Circadian rhythms of spermatogonial stem cells, 9:29449 (RA;US)
SPERMATOZOA
Chromosomal Aberrations
Meiotic segregation in partially sterile male translocation heterozygotes, 9:29448 (RA;US)
SPHEROMAK DEVICES
Charged-Particle Transport
Transport in compact tori, 9:29920 (R;US)
Helical Configuration
Steady-state operation of spheromaks by inductive techniques, 9:30013 (R;US)
Research Programs
Annual report, October 1, 1981-September 30, 1982, 9:30014 (R;US)
SPINELS
Physical Radiation Effects
Defect formation in $MgOxnAl_2O_3$ at gamma-neutron irradiation, 9:28834 (RA;UA;In Russian)
SPOIL BANKS
Electric Conductivity
Earth resistivity investigations in reclaimed surface lignite mine spoils, 9:27815 (R;US)
SPRINGS (WATER)
See WATER SPRINGS
SPUTTERING
Reviews
Physics of ion sputtering, 9:29554 (R;US)
SRC PROCESS
Closed-Cycle Systems
Zero-discharge study, 9:27740 (RA;US)
Coal Liquids
SRC-I naphtha hydrotreating study non-proprietary version. Final technical report, 9:27759 (R;US)
Computerized Simulation
Steady-state process simulator for the SRC-I process: updated study and final recommendations (ASPEN plus), 9:27733 (RA;US)
Correlations
Effect of feed coal variation on demonstration plant performance. Relationships between coal properties and liquefaction yields, 9:27734 (RA;US)

Data Base Management
Evaluation of the DECHEMA proposal for an SRC-I thermophysical properties data base software system, 9:27731 (RA;US)
Demonstration Plants
Ash pond cost study, 9:27739 (RA;US)
Environmental assessment of a barge dock facility for the SRC-I demonstration plant (Newman, KY), 9:27753 (RA;US)
Geotechnical engineering study (Newman, KY), 9:27754 (RA;US)
Site liquefaction analyses (Newman, KY; risk assessment), 9:27755 (RA;US)
SRC-I quarterly technical report, April-June 1983, 9:27745 (R;US)
SRC-I quarterly technical report, January-March 1983 (6000 Tpd plant near Newman, KY), 9:27728 (R;US)
SRC plant reliability assessment final report, 9:27743 (RA;US)
Steam optimization study, 9:27752 (RA;US)
Variable-speed drives: suitability and selection, 9:27737 (RA;US)
Water intake structure study (Newman, KY), 9:27756 (RA;US)
Zero-discharge study, 9:27740 (RA;US)
Environmental Effects
Environmental assessment of a barge dock facility for the SRC-I demonstration plant (Newman, KY), 9:27753 (RA;US)
Foundations
Geotechnical engineering study (Newman, KY), 9:27754 (RA;US)
Site liquefaction analyses (Newman, KY; risk assessment), 9:27755 (RA;US)
Fuel Feeding Systems
Pulverized coal metering, 9:27738 (RA;US)
Hydrogen Production
Kerr-McGee MAR case vs. Filter Cake MAR (BASE) case, 9:27748 (RA;US)
Information Systems
Evaluation of the DECHEMA proposal for an SRC-I thermophysical properties data base software system, 9:27731 (RA;US)
Mathematical Models
Preliminary phase equilibrium model for the SRC-I process, 9:27732 (RA;US)
Power Supplies
Steam optimization study, 9:27752 (RA;US)
Pumps
Variable-speed drives: suitability and selection, 9:27737 (RA;US)
Reliability
SRC plant reliability assessment final report, 9:27743 (RA;US)
Research Programs
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
Residues
Ash pond cost study, 9:27739 (RA;US)
Site Selection
Geotechnical engineering study (Newman, KY), 9:27754 (RA;US)
Steam Generation
Steam optimization study, 9:27752 (RA;US)
Steam Systems
Steam optimization study, 9:27752 (RA;US)
Terminal Facilities
Environmental assessment of a barge dock facility for the SRC-I demonstration plant (Newman, KY), 9:27753 (RA;US)
Waste Water
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)
Zero-discharge study, 9:27740 (RA;US)
Water Supply
Water intake structure study (Newman, KY), 9:27756 (RA;US)
SRC-II PROCESS
Research Programs
Exploratory research on solvent refined coal liquefaction. Final technical progress report, FE/14800-35, 9:27722 (R;US)
STAINLESS STEEL-304
Chemical Analysis
Atomprobe-analysis of interfaces and grain boundaries in stainless steel welds, 9:28776 (RA;AT)
Corrosion Products
Corrosion-product release in light water reactors, 9:28282 (R;US)
Tensile Properties
Dependence on neutron-induced displacement rate of tensile property changes in annealed AISI 304 and 316, 9:28753 (RA;US)
STAINLESS STEEL-304L
Brazed Joints
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
Resistance Welding
Upset weld study for joining 304L stainless steel tubes, 9:28767 (R;US)
STAINLESS STEEL-316
Corrosion
Corrosion of 316SS and IN800 in molten $NaNO_3$ - KNO_3, 9:28800 (J;US)
Creep
Thermal creep and stress-affected precipitation of 20% cold-worked 316 stainless steel, 9:28760 (RA;US)
Fractures
Correlation of fracture toughness with tensile properties for irradiated 20% cold-worked 316 stainless steel, 9:28752 (RA;US)
Physical Radiation Effects
Fast neutron irradiation of alloys with a higher nickel content than SS 316, 9:28725 (R;FR;In French)
Ion bombardment effects on the fatigue life of stainless steel under simulated fusion first wall conditions, 9:28734 (R;US)
Tensile Properties
Correlation of fracture toughness with tensile properties for irradiated 20% cold-worked 316 stainless steel, 9:28752 (RA;US)
Dependence on neutron-induced displacement rate of tensile property changes in annealed AISI 304 and 316, 9:28753 (RA;US)
STAINLESS STEEL-405
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report, 9:28279 (R;US)
STAINLESS STEELS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-316
STAINLESS STEEL-405
Brazing
Fabrication and leak-tight furnace brazing of intricate objects, 9:29020 (J;US)
Corrosion Fatigue
Corrosion fatigue of high strength fastener materials in seawater. Final report, 9:28239 (R;US)
Fatigue
Temperature dependence of fatigue crack growth rates of A 351 CF8A cast stainless steel in LWR environment, 9:28789 (R;US)
Laser Welding
Heat transfer, fluid flow and element vaporization in laser welding. Progress report, August 1, 1983-July 31, 1984 (AISI 202), 9:28765 (R;US)
Microstructure
Theoretical assessment of the effect of microchemical, microstructural and environmental mechanisms on swelling incubation in austenitic stainless steels, 9:28755 (RA;US)
Ruptures
Model for in-reactor stress rupture of austenitic stainless steels, 9:28751 (RA;US)
Stresses
Model for in-reactor stress rupture of austenitic stainless steels, 9:28751 (RA;US)

Swelling
Factors that determine the swelling behavior of austenitic stainless steels, 9:28756 (RA;US)
Theoretical assessment of the effect of microchemical, microstructural and environmental mechanisms on swelling incubation in austenitic stainless steels, 9:28755 (RA;US)
STANDARDS
Cost Benefit Analysis
Estimating air quality impacts and associated costs of achieving alternative national ambient air quality standards for particulate matter, 9:28507 (R;US)
Environmental Impacts
Estimating air quality impacts and associated costs of achieving alternative national ambient air quality standards for particulate matter, 9:28507 (R;US)
STANDING CROP
See BIOMASS
STANFORD 20-GEV LINAC
Drift Chambers
New drift chamber for the Mark II at SLC, 9:29136 (R;US)
STANFORD LINEAR ACCELERATOR CENTER
Operation
Stanford Linear Accelerator Center monthly report for April 1984, 9:29096 (R;US)
Research Programs
Stanford Linear Accelerator Center monthly report for April 1984, 9:29096 (R;US)
STANFORD LINEAR COLLIDER
Beam Bunching
Klystron voltage pulse timing experiment, 9:29077 (R;US)
Making electron beams for the SLC linac, 9:29108 (R;US)
Beam Dynamics
Positron source: first 50 nanoseconds, 9:29089 (R;US)
Beam Extraction
Update on beam extraction, 9:29103 (R;US)
Beam Focusing Magnets
Effects of superposition of detector solenoid and FFS quadrupole fields in SLC and correction methods, 9:29080 (R;US)
First order comparison of numerical calculation and two different turtle input schemes to represent a SLC defocusing magnet, 9:29078 (R;US)
Mask locations in the SLC final focus region, 9:29083 (R;US)
Modifications of the design of the final transformer in the FFS to accommodate lower gradients in the final quadrupole triplet, 9:29081 (R;US)
Preliminary study of the positions of elements in LTR, 9:29085 (R;US)
Simulation of systematic errors in the SLC magnets, 9:29082 (R;US)
Beam Monitoring
BPMO HISTOS plots, 9:29087 (R;US)
Consequences for SLC of using full beam power in shielding design, 9:29060 (R;US)
Beam Optics
Further effects of ions in the arcs, 9:29084 (R;US)
Beam Position
BPMO HISTOS plots, 9:29087 (R;US)
Beam Production
Making electron beams for the SLC linac, 9:29108 (R;US)
Beam Transport
Further effects of ions in the arcs, 9:29084 (R;US)
Preliminary study of the positions of elements in LTR, 9:29085 (R;US)
Temperature rise calculations for the beam pipe in the SLC arcs, 9:29102 (R;US)
Cavity Resonators
Optimum operating temperature for accelerator diskloaded waveguide: test results from Sector 2, 9:29086 (R;US)
Electron Beams
Acceleration of high charge density electron beams in the SLAC linac, 9:29090 (R;US)
Ground Motion
Ground motion - some relative phase measurements in the PEP tunnel, 9:29107 (R;US)
Mechanical Vibrations
Ground motion - some relative phase measurements in the PEP tunnel, 9:29107 (R;US)
Ground motion: frequency of occurrence versus amplitude of disturbing transient events, 9:29105 (R;US)
Recommendations for on-site vibration standards, 9:29079 (R;US)
Survey of vibration amplitudes throughout the linac, 9:29106 (R;US)
Phase Stability
Phase & amplitude control system for Stanford Linear Accelerator, 9:29088 (R;US)
Positron Sources
Engineering basis for selection of positron source material, 9:29571 (R;US)
Radiation Protection
Occupancy of the SLC arcs during linac operation, 9:29104 (R;US)
RF Systems
High power rf klystrons for linear accelerators, 9:29109 (R;US)
Shielding
Consequences for SLC of using full beam power in shielding design, 9:29060 (R;US)
Temperature Effects
Optimum operating temperature for accelerator diskloaded waveguide: test results from Sector 2, 9:29086 (R;US)
STAR EVOLUTION
Mathematical Models
Spherically symmetric hydrodynamic model calculations on the evolution of interstellar matter and on stellar evolution in the cove of spiral-galaxies, 9:29535 (R;DE;In German)
STARFIRE TOKAMAK
Breeding Blankets
HYFIRE: A tokamak-high-temperature electrolysis system, 9:30051 (J;US)
Electrolysis
HYFIRE: A tokamak-high-temperature electrolysis system, 9:30051 (J;US)
First Wall
Comparison of activation in STARFIRE and MARS first walls, 9:29994 (RA;US)
Maintenance
Compact fusion reactors availability analysis, 9:30018 (RA;US)
Radioactivation
Comparison of activation in STARFIRE and MARS first walls, 9:29994 (RA;US)
Safety
Safety comparison of d-d and d-t fueled fusion reactors, 9:30016 (RA;US)

Engineering
Steam optimization study, 9:27752 (RA;US)
STEAM GENERATORS
After-Heat Removal
Decay heat removal experiments in a U-tube steam generator one-loop test facility. Final report, 9:28283 (R;US)
Cleaning
PWR steam generator chemical-cleaning data base. Volume 2. Final report, 9:28285 (R;US)
Corrosion Denting
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report (PWR), 9:28279 (R;US)
Evaluation of field applications of boric acid in PWR steam generators. Final report, 9:28280 (R;US)

Emission
The impact of New Source Performance Standards on advanced industrial energy technology, 9:29053 (J;US)
Energy Conservation
The impact of New Source Performance Standards on advanced industrial energy technology, 9:29053 (J;US)
Energy Efficiency
Energy, capacity and economic effects of cogeneration interfaced with electric utility systems, 9:28690 (J;US)
Heat Transfer
Mitigation of thermal transients by tube bundle inlet plenum design (LMFBR), 9:28400 (R;US)
Hydraulics
Mitigation of thermal transients by tube bundle inlet plenum design (LMFBR), 9:28400 (R;US)
Reactor Maintenance
Dilute chemical cleaning of PWR steam generators off-line cleaning process evaluation, 9:28275 (R;US)
Surface Cleaning
Dilute chemical cleaning of PWR steam generators off-line cleaning process evaluation, 9:28275 (R;US)
PWR steam generator chemical-cleaning data base. Volume 1. Final report, 9:28284 (R;US)
Test Facilities
Decay heat removal experiments in a U-tube steam generator one-loop test facility. Final report, 9:28783 (R;US)
Transients
Modeling transients in PWR steam generator units, 9:28463 (J;US)
Transient simulation studies for PWR U-tube steam generators. Final report, 9:28281 (R;US)

STEAM INJECTION
Waste Water
Tar sand process water control technology. Draft final report, 9:27891 (R;US)

STEAM SYSTEMS
Engineering
Steam optimization study, 9:27752 (RA;US)
Water Chemistry
Determination and verification of required water chemistry limits. Volume 1. Summary report. Final report (PWR), 9:28279 (R;US)

STEAM TURBINES
Rotors
Acoustic emissions from crack growth in steam turbine rotor steels. Final report, 9:28252 (R;US)

STEAMBOAT SPRINGS
Geochemical Surveys
Geologic and hydrologic research on the Moana geothermal system, Washoe County, Nevada. Final report October 1, 1982-December 31, 1983, 9:28213 (R;US)
Gravity Surveys
Geologic and hydrologic research on the Moana geothermal system, Washoe County, Nevada. Final report October 1, 1982-December 31, 1983, 9:28213 (R;US)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-ASTM-A508
Fracture Properties
J-R curve characterization of irradiated low upper shelf welds, 9:28788 (R;US)
Mechanical Properties
Dynamic structural analysis of a head assembly for a large loop-type LMFBR, 9:28403 (R;US)
Physical Radiation Effects
J-R curve characterization of irradiated low upper shelf welds, 9:28788 (R;US)

STEEL-ASTM-A533
Fracture Properties
J-R curve characterization of irradiated low upper shelf welds, 9:28788 (R;US)
Physical Radiation Effects
J-R curve characterization of irradiated low upper shelf welds, 9:28788 (R;US)

WENDELSTEIN-7 STELLARATOR
ECR Heating
Calculation of the energy deposition of electron cyclotron waves in a stellarator plasma, 9:29945 (R;DE)
Equilibrium
Heliac parameter study, 9:29964 (J;US)
Parametric Analysis
Heliac parameter study, 9:29964 (J;US)
Stability
Heliac parameter study, 9:29964 (J;US)

STELLITE 6
Corrosion Products
Corrosion-product release in light water reactors, 9:28282 (R;US)

STEM CELLS
Biological Radiation Effects
Effect of age on the spermatogonial stem cell population of the mouse, 9:29450 (RA;US)
Cell Proliferation
Effect of age on the spermatogonial stem cell population of the mouse, 9:29450 (RA;US)

STEROID HORMONES
Biochemistry
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology and control of the crustacean molt cycle, 9:29336 (RA;US)

STIMULATED EMISSION DEVICES
See LASERS
MASERS

STIRLING ENGINES
Research Programs
Overview of NASA Lewis Research Center free-piston Stirling engine activities, 9:28710 (R;US)

Uses
Stirling engine applications study. Final report Jan-Dec 82, 9:29056 (R;US)

STOMATA
Closures
Flooding and SO_2 stress interaction in Betula papyrifera and B. nigra seedlings, 9:29503 (J;US)

STOODY
See STELLITE 6

STOPPING POWER
Mathematical Models
Current status of calculations and measurements of ion stopping power in ICF plasmas, 9:30022 (R;US)

STOPPING POWER (TOTAL ATOMIC)
See STOPPING POWER

STOPPING POWER (TOTAL LINEAR)
See STOPPING POWER

STOPPING POWER (TOTAL MASS)
See STOPPING POWER

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE BATTERIES (LEAD-ACID)
See LEAD-ACID BATTERIES

STORAGE FACILITIES
Capacity
Spent fuel storage requirements. An update of DOE/RL-83-1 (Through 1993), 9:27916 (R;US)
Site Selection
Technical and economical investigation of a distribution system for coal dust by means of computer-aided decision making, 9:27824 (R;DE;In German)

STORAGE RINGS
See also SPEAR
SUPERCONDUCTING SUPER COLLIDER
VEPP-4
Electron Beams
Simulation of ultra-low emittance electron storage rings. Technical progress report, 9:29114 (R;US)
Experiment Planning
Virtues of HERA, 9:29586 (RA;DE)
Meetings
Experimentation at HERA, 9:29585 (R;DE)

STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE

STORES
See COMMERCIAL BUILDINGS

STOVER
See AGRICULTURAL WASTES

STRAIN GAGES
Filaments
Development of long-length wire-filament strain gages, 9:29152 (R;US)

STRAND BREAKS
Biological Repair
Mammalian cytogenetics, 9:29444 (RA;US)

STRATEGIC PETROLEUM RESERVE
Enviroamental Effects
Strategic Petroleum Reserve annual environmental monitoring report, 1983, 9:27866 (R;US)
Storage Facilities
Strategic Petroleum Reserve (SPR) cavern and well creep-closure tests, 9:27875 (R;US)
Waste Disposal
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1982-November 1983. Volume I, 9:27867 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry site, May 1982-November 1983. Volume II, Appendices, 9:27868 (R;US)
Offshore oceanographic and environmental monitoring services for the Strategic Petroleum Reserve. Eighteen-month report for the West Hackberry Site, May 1983-November 1983. Volume III, Executive Summary, 9:27869 (R;US)

STRATIFIED CHARGE ENGINES
Combustion Kinetics
Investigation of the operating of stratified charge engines with divided combustion chamber, 9:28702 (R;DE;In German)
Computerized Simulation
Investigation of the operating of stratified charge engines with divided combustion chamber, 9:28702 (R;DE;In German)
Mathematical Models
Investigation of the operating of stratified charge engines with divided combustion chamber, 9:28702 (R;DE;In German)

STRESS ANALYSIS
Calculation Methods
Response of a heavy-wall reactor vessel to a hot-spot thermal upset condition. Part I. Thermal/mechanical analyses, 9:27730 (RA;US)

STRESSES
Mechanics.
Measuring Methods
Method and apparatus for measuring stress, 9:29033 (P;US)

STRIPED BASS
Behavior
Avoidance responses of estuarine fish to sulfur dioxide. Final report, 9:29498 (R;US)

STRONTIUM
Sorption
Prediction parameters of radionuclide retention at low-level radioactive waste sites, 9:27973 (R;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

STRONTIUM 90
Ion Exchange
Reduction of radiostrontium mobility in acid soils by carbonate treatment, 9:29280 (J;US)
Radionuclide Migration
Reduction of radiostrontium mobility in acid soils by carbonate treatment, 9:29280 (J;US)

STRUCTURAL BUCKLING
See DEFORMATION

STRUCTURAL MATERIALS
See BUILDING MATERIALS

STRUCTURES (BUILDINGS)
See BUILDINGS

STRUCTURES (MECHANICS)
See MECHANICAL STRUCTURES

STYRENE
Chemical Preparation
Kinetics of vapor-phase electrochemical oxidative dehydrogenation of ethylbenzene, 9:28951 (J;US)

STYRENE POLYMERS
See POLYSTYRENE

SU-2 GROUPS
Algebra
Elementary representations and interwining operators for SU(2,2) - I, 9:29662 (R;IT)

SUBBITUMINOUS COAL
Pyrolysis
Effect of time/temperature history on char reactivity, 9:27717 (R;US)

SUBSYSTEM TEST FACILITY
See MSSTF

SUBURBS
See URBAN AREAS

SULFATES
See also CALCIUM SULFATES
MAGNESIUM SULFATES
POTASSIUM SULFATES
SODIUM SULFATES
Atmospheric Chemistry
Mesoscale spatial variability of sulfate in air and rainwater at St. Louis, 9:29228 (J;NL)
Chemical Reaction Kinetics
Atmospheric aqueous-phase reactions of nitrogen species, 9:29196 (R;US)

Deposition
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29268 (J;US)
Atmospheric sulfur deposition, neutralization, and ion leaching in two deciduous forest ecosystems, 9:29230 (J;US)
Ecological Concentration
Rocky Mountain acidification study, 9:29259 (R;US)
Urban influences on local precipitation chemistry during winter and spring, 9:29191 (RA;US)
Long-Range Transport
Relative contribution to sulfur atmospheric concentrations and deposition from long-range transport, 9:29180 (RA;US)
Nuclear Magnetic Resonance
Investigation of triproton groups mobility by measuring angular dependence of relaxation time T_1 in triglicine sulfate monocrystal, 9:28931 (RA;PL;In Polish)
Washout
Urban and local source effects on precipitation chemistry, 9:29192 (R;US)

SULFUR
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Atmospheric Chemistry
Atmosphere as stockroom and pre-reactor for gas-liquid reactions, 9:29186 (R;US)
Chemical Analysis
Elemental analysis round robin (In coal liquids; includes different methods), 9:27736 (RA;US)
Chemical Reactions
Elemental sulfur and selenium induced intramolecular carbyne-carbyne coupling in trinuclear bis(carbyne) cobalt clusters. A novel entry into metalladithiolenes and metalladiselenolenes, 9:28925 (J;US)
Deposition
Simulation modeling of atmospheric deposition of sulfur from biogenic and anthropogenic emissions, 9:29198 (R;US)
Ecological Concentration
Litterfall sulfur and nitrogen inputs as influenced by power plant proximity, 9:29227 (J;NL)
Mineral Cycling
Litterfall sulfur and nitrogen inputs as influenced by power plant proximity, 9:29227 (J;NL)
Polarography
Instrumental methods of analysis of sulfur compounds in synfuel process streams. Quarterly technical progress report, January-March 1984, 9:27785 (R;US)
Pollution Sources
Simulation modeling of atmospheric deposition of sulfur from biogenic and anthropogenic emissions, 9:29198 (R;US)
Recovery
Makeup hydrogen production from filter cake or Kerr-McGee ash concentrate using an alternative coal feedstock, 9:27750 (RA;US)
Revised feed case vs base case using Texaco gasification, 9:27749 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

SULFUR 32
M1-Transitions
Low multipolarity magnetic transitions in ^{32}S excited by electron scattering, 9:29744 (J;US)
M2-Transitions
Low multipolarity magnetic transitions in ^{32}S excited by electron scattering, 9:29744 (J;US)

SULFUR 32 TARGET
Electron Reactions
Low multipolarity magnetic transitions in ^{32}S excited by electron scattering, 9:29744 (J;US)

SULFUR COMPOUNDS
See also SULFATES
SULFUR FLUORIDES
SULFUR OXIDES
Quantitative Chemical Analysis
Instrumental methods of analysis of sulfur compounds in synfuel process streams. Quarterly technical progress report, January-March 1984, 9:27785 (R;US)

SULFUR DIOXIDE
Air Pollution Abatement
TVA's SO_2 control options - today and tomorrow, 9:27801 (R;US)
Air Pollution Control
TVA's SO_2 control options - today and tomorrow, 9:27801 (R;US)
Biological Effects
Effects of SO_2 on stomatal metabolism in Pisum sativum L, 9:29507 (J;US)
Flooding and SO_2 stress interaction in Betula papyrifera and B. nigra seedlings, 9:29503 (J;US)
Quality of tomatoes harvested from plants receiving chronic exposures to sulfur dioxide, 9:29506 (J;US)
Flux Density
Sulfur dioxide, carbon dioxide, and water vapor flux measurements utilizing a microprocessor controlled data acquisition system in a pine plantation. Rev. 2, 9:29206 (R;US)
Long-Range Transport
Relative contribution to sulfur atmospheric concentrations and deposition from long-range transport, 9:29180 (RA;US)
Monitoring
Evaluation and demonstration of the chemically active fluid bed. Final report May 75-Jul 81, 9:27776 (R;US)
Oxidation
Indications of nonlinearities in processes of wet deposition, 9:29178 (RA;US)
Toxicity
Avoidance responses of estuarine fish to sulfur dioxide. Final report, 9:29498 (R;US)
Washout
Urban and local source effects on precipitation chemistry, 9:29192 (R;US)

SULFUR FLUORIDES
Purification
Particle contamination in gas-insulated systems: new control methods and optimum SF_6/N_2 mixtures, 9:28828 (R;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR OXIDES
See also SULFUR DIOXIDE
Air Pollution
Air quality criteria for particulate matter and sulfur oxides. Volume 1. Final report, 9:29220 (R;US)
Air quality criteria for particulate matter and sulfur oxides. Volume 2. Final report, 9:29221 (R;US)
Air quality criteria for particulate matter and sulfur oxides. Volume 3. Final report, 9:29222 (R;US)
Air Pollution Control
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Decomposition
Thermochemical energy transport systems study, 9:28190 (R;US)
Particulates
Air quality criteria for particulate matter and sulfur oxides. Volume 2. Final report, 9:29221 (R;US)

SULFUR SULFIDES
See SULFUR

SUN SHADES
Design
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Heat Gain
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)
Heat Transfer Fluids
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)

SUPER PHENIX REACTOR
Reactor Vessels
Study of the efficiency of the anti-convective thermal barrier of the Super-Phenix vessels inter space, 9:28295 (R;FR;In French)
Thermal Insulation
Study of the efficiency of the anti-convective thermal barrier of the Super-Phenix vessels inter space, 9:28295 (R;FR;In French)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING CABLES
Patents
Improved superconducting magnet wire, 9:30045 (P;US)
SUPERCONDUCTING COILS
Switching Circuits
New one-phase dual converter for superconducting inductive energy storage and transfer applications: the one-phase inductor-converter bridge, 9:29985 (R;US)
SUPERCONDUCTING DEVICES
Restricted to general or review articles and bibliographies.
See also SUPERCONDUCTING MAGNETS
Electronic Circuits
Thin film technology of high-critical-temperature superconducting electronics. Annual report 1 Aug 82-30 Oct 83, 9:28977 (R;US)
SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Cost
Conceptual design and cost of a superconducting magnetic energy storage plant. Final report, 9:28473 (R;US)
Design
Conceptual design and cost of a superconducting magnetic energy storage plant. Final report, 9:28473 (R;US)
SUPERCONDUCTING MAGNETS
Acoustic Emission Testing
Acoustic emission instrumentation system for monitoring large superconducting magnets, 9:29997 (R;US)
Data Acquisition Systems
Low level signal data acquisition for the MFTF-B superconducting magnet system, 9:30028 (R;US)
Fabrication
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Performance
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Quenching
Consecutive quenches and the safety leads, 9:29097 (R;US)
SUPERCONDUCTING SUPER COLLIDER
Experiment Planning
New particles and interactions, 9:29609 (R;US)
SUPERCONDUCTING WIRES
Critical Current
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
SUPERCONDUCTIVITY
Magnetism
Coexistence of superconductivity and magnetism, 9:29885 (BA;US)
SUPERCONDUCTORS
Transition Temperature
Re-entrant superconductivity, 9:29886 (BA;US)
SUPERCRITICAL FLUID CHROMATOGRAPHY
Equipment
Supercritical fluid chromatography/supersonic jet spectroscopy. Progress report, February 1-April 30, 1984, 9:27787 (R;US)
SUPERCRITICAL GAS EXTRACTION
Research Programs
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
SUPERGRAVITY
Merons
Stability of merons in gravitational models, 9:29890 (R;IT)
Research Programs
Theoretical high energy physics. Progress report, May 1, 1983-April 30, 1984, 9:29627 (R;US)
SO-4 Groups
SO(4) gauging of N=2 supergravity in seven dimensions, 9:29894 (R;IT)
Symmetry
Symmetry aspects of Kaluza-Klein theories, 9:29892 (R;IT)
SUPERLATTICES
Crystal Growth
Superlattice structures grown by molecular beam epitaxy, 9:28079 (R;US)
Molecular Beam Epitaxy
Superlattice structures grown by molecular beam epitaxy, 9:28079 (R;US)
Stability
Be-implantation doping of GaAs/sub x/P/sub 1-x//GaP strained-layer superlattices, 9:28841 (J;US)
SUPEROXIDE DISMUTASE
Biological Evolution
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
Genetic Mapping
Genetic basis of mutagenesis and carcinogenesis, 9:29370 (RA;US)
SUPERSONIC FLOW
Shock Waves
Ion reflection, gyration, and dissipation at supercritical shocks, 9:29548 (R;US)
SUPERSYMMETRY
Postulated Particles
Gluino decays and experimental signatures, 9:29647 (J;NL)
Quantum Mechanics
Fun with supersymmetric quantum mechanics, 9:29673 (R;US)
Symmetry Breaking
Fun with supersymmetric quantum mechanics, 9:29673 (R;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SURFACE AIR
Chemical Analysis
Chemiluminescent detection of reduced sulfur compounds with ozone, 9:29231 (J;US)
SURFACE CLEANING
Data Acquisition Systems
PWR steam generator chemical-cleaning data base. Volume 1. Final report, 9:28284 (R;US)
SURFACE MINING
Environmental Impacts
Atlas of wetlands in the principal coal surface mining region of western Kentucky. Reference report, 9:27807 (R;US)
Land Reclamation
Environmental assessment of surface mining methods: head-of-hollow fill and mountaintop removal. Volume 1. Final report, Nov 75-Apr 80, 9:27804 (R;US)
Environmental assessment of surface mining methods head-of-hollow fill and mountaintop removal. Volume 2. Final report, Nov 75-Oct 81, 9:27805 (R;US)
Noise Pollution Abatement
Mining machinery noise control guidelines, 1983: bureau of mines handbook, 9:27819 (R;US)
Spoil Banks
Earth resistivity investigations in reclaimed surface lignite mine spoils, 9:27815 (R;US)
SURFACE WATERS
See also COASTAL WATERS
SEAS
WATER RESERVOIRS
Acidification
Potential impacts of low pH on fish and fish populations, 9:29468 (R;US)
Chemical Analysis
Determination of ^{226}Ra volume activity in waters, 9:28863 (R;CS;In Czech)
Liming
Liming of acidified waters: issues and research - a report of the international liming workshop, 9:29296 (R;US)

Water Quality
Hydrogeologic investigation of the Ritchie Road site. Final report, 9:27806 (R;US)
SURFACE-ACTIVE AGENTS
See SURFACTANTS
SURFACES
See also SPECTRALLY SELECTIVE SURFACES
Laser Spectroscopy
New approaches to photothermal spectroscopy, 9:28875 (R;US)
Probes
Surface studies using optical second-harmonic generation, 9:28874 (R;US)
SURFACTANTS
Testing
Response of crude oil slicks to dispersant treatment at sea, 1978 tests. Final report, Jan 78-Dec 80, 9:27870 (R;US)
Response of crude oil slicks to dispersant treatment at sea, 1979 tests. Final report, Jan 79-Dec 80, 9:27871 (R;US)
SURGICAL MATERIALS
Evaluation
Hydrogel modified materials surfaces for the ERDA artificial heart. Final report , 9:29412 (R;US)
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEAT GLANDS
See SKIN
SWEDEN
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs (List of organizations involved and, in some cases, processing flowsheets), 9:27829 (R;US)
Boilers
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization (By country, number, capacity (MWe) and age, utilities and industrial design), 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary (Number and total MWe of boilers less than 20 years old by country cooperating), 9:27827 (R;US)
Energy Conservation
Consumer energy conservation policies in Sweden, 9:28535 (R;DE)
Reactor Safety
Nuclear safety in Sweden: policy and practice, 9:28461 (J;US)
Research Programs
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
SWITCHES
Gas Discharge Tubes
Transport properties and dielectric strengths of gas mixtures for use in diffuse discharge opening switches, 9:29043 (R;US)
SWITCHING CIRCUITS
Design
New one-phase dual converter for superconducting inductive energy storage and transfer applications: the one-phase inductor-converter bridge, 9:29985 (R;US)
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRONS
See also BROOKHAVEN AGS
FERMILAB ACCELERATOR
NSLS
SATURNE
SATURNE II
Neutron Sources
High-current, low-energy synchrotrons and compressor rings, 9:28001 (R;US)
SYNTHESIS GAS
Desulfurization
Sulfur removal from producer gas. Final report, 9:28026 (R;US)
Purification
Revised feed case vs base case using Texaco gasification, 9:27749 (RA;US)
Selective vs nonselective acid gas removal processes, 9:27751 (RA;US)
SYNTHETIC FUELS
Feasibility Studies
Assessing the alternative fuels production program, 9:28519 (J;US)
Market
Providing R and D (research and development) test fuels from alternate energy sources: an assessment of options, 9:28544 (R;US)
Production
Assessing the alternative fuels production program, 9:28519 (J;US)
Non-fossil energy for the production of synthetic fuels from Coal I. Fusion reactor with high temperature steam electrolyzer and gasifier, 9:30050 (J;US)
Research Programs
Assessing the alternative fuels production program, 9:28519 (J;US)
Providing R and D (research and development) test fuels from alternate energy sources: an assessment of options, 9:28544 (R;US)
SYNTHETIC FUELS CORPORATION
Contract Management
US Synthetic Fuels Corporation's contracting with individual consultants, 9:28491 (R;US)
SYNTHINE PROCESS
See FISCHER-TROPSCH SYNTHESIS

T

TAIWAN
Harbors
Western US steam coal exports to the Pacific Basin: port and marine task group, 9:27823 (R;US)
TANDEM ELECTROSTATIC ACCELERATORS
Prior to February 1979,information was indexed to Van de Graaff Accelerators.
Heavy Ion Accelerators
Calculation of the heavy ion Saclay tandem post accelerator beams, 9:29067 (R;FR)
Particle Boosters
Calculation of the heavy ion Saclay tandem post accelerator beams, 9:29067 (R;FR)
TANDEM MIRROR DEVICES
See TMR REACTORS
TMX DEVICES
TANDEM MIRROR TYPE REACTORS
See TMR REACTORS
TANDEM MIRRORS
Prior to September 1983 this concept was indexed to TMX DEVICES.
See also TMX DEVICES
Plasma Confinement
Azimuthal electric fields and tandem ambipolarity, 9:29956 (R;US)
TANK FARMS
See STORAGE FACILITIES
TANKS
Calibration
Automated program for the acquisition of tank calibration data, 9:27997 (R;US)
Cleaning
Effective cleaning radius studies, 9:27938 (R;US)
TANTALUM
Alpha Reactions
Description of correlations between the multiplicities of πp mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon, 9:29783 (R;SU;In Russian)
Carbon 12 Reactions
Description of correlations between the multiplicities of π^- mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon, 9:29783 (R;SU;In Russian)

Deuteron Reactions
Description of correlations between the multiplicities of π^- mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon, 9:29783 (R;SU;In Russian)
Proton Reactions
Description of correlations between the multiplicities of π^- mesons and nonrelativistic protons in nucleus-nucleus interactions at 4,2 GeV/c momentum per nucleon, 9:29783 (R;SU;In Russian)

TETRALIN
Solvent Properties
Reactions governing coal solubilization. Third quarterly progress report, January 15, 1984 to April 15, 1984, 9:27768 (R;US)
TEXACO GASIFICATION PROCESS
Cost and performance for commercial applications of Texaco-based gasification/combined-cycle plants. Volume 1. Summary and discussion of results. Final report, 9:27770 (R;US)
Cost and performance for commercial applications of Texaco-based gasification-combined-cycle plants. Volume 2. Design details. Final report, 9:27771 (R;US)
Kerr-McGee MAR case vs. Filter Cake MAR (BASE) case, 9:27748 (RA;US)
Makeup hydrogen production from filter cake or Kerr-McGee ash concentrate using an alternative coal feedstock, 9:27750 (RA;US)
Chemical Feedstocks
Pilot plant evaluation of Exxon Donor Solvent residue for the Texaco Coal Gasification Process. Final report, 9:27769 (R;US)
Comparative Evaluations
Coal Liquefaction Technology Assessment. Final report, Phase II Koppers gasification, 9:27775 (R;US)
Pilot Plants
Pilot plant evaluation of Exxon Donor Solvent residue for the Texaco Coal Gasification Process. Final report, 9:27769 (R;US)
Purification
Selective vs nonselective acid gas removal processes, 9:27751 (RA;US)
TEXAS
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)
Geologic Structures
Lineaments of Texas - possible surface expressions of deep-seated phenomena. Final report, 9:28195 (R;US)
Geology
Lineaments of Texas - possible surface expressions of deep-seated phenomena. Final report, 9:28195 (R;US)
TEXTILE INDUSTRY
Energy Consumption
Energieverbruik in de textielnijverheid (The consumption of energy in the textile industry). Final report, 9:28682 (R;US)
TEXTOR TOKAMAK
Bellows
Manufacturing and quality test of the metal bellows of the TEXTOR vacum vessel, 9:30007 (R;DE;In German)
Vacuum Systems
Manufacturing and quality test of the metal bellows of the TEXTOR vacum vessel, 9:30007 (R;DE;In German)
TFR TOKAMAK
Tearing Instability
Modeling of the L.F. turbulent spectrum during ohmic discharges, auxiliary heating and disruptions in Tokamak, 9:29927 (R;FR)
Turbulence
Modeling of the L.F. turbulent spectrum during ohmic discharges, auxiliary heating and disruptions in Tokamak, 9:29927 (R;FR)
TFTR REACTORS
Reactor Cooling Systems
Thermal analysis of the TFTR vacuum vessel, 9:30040 (J;US)
Reactor Vessels
Thermal analysis of the TFTR vacuum vessel, 9:30040 (J;US)
Research Programs
Annual report, October 1, 1981-September 30, 1982, 9:30014 (R;US)
Temperature Control
Thermal analysis of the TFTR vacuum vessel, 9:30040 (J;US)

THALLIUM
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
THERMAL BATTERIES
Cathodes
XPS examination of Cr(V) compounds, 9:28919 (R;US)
Quality Control
Quality control analysis of TA-23 glass seals for lithium ambient temperature batteries, 9:28482 (R;US)
Sealing Materials
Quality control analysis of TA-23 glass seals for lithium ambient temperature batteries, 9:28482 (R;US)
THERMAL CONDUCTIVITY
Calibration Standards
Effective thermal conductivity of glass-fiber board and blanket standard reference materials, 9:28816 (BA;US)
THERMAL EFFICIENCY
Recommendations
NAHB thermal performance guidelines: 1982 methodology update, 9:28643 (BA;US)
THERMAL EFFLUENTS
Environmental Effects
Benthic macroinvertebrate community structural and functional group response to cooling water discharge in the Savannah River and a coastal plain tributary, 9:29304 (R;US)
THERMAL ENERGY STORAGE EQUIPMENT
Performance Testing
Technical utilization of solar energy - conversion of solar to thermal energy, solar cooling and thermal energy storage, 9:28140 (R;DE;In German)
Research Programs
Thermal energy storage program annual operating plan FY 1984, 9:28477 (R;US)
Surveys
Description of six representative thermal energy storage installations, 9:28476 (R;US)
THERMAL ENVELOPE HOUSES

THERMAL INSULATION
Comparative Evaluations
An in situ study of attic loose-fill thermal insulation in residential applications, 9:28645 (BA;US)
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
Density
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
Health Hazards
Formaldehyde release from simulated wall panels insulated with urea-formaldehyde foam insulation, 9:29232 (J;US)
Safety information profile: overview of building construction, including the use of insulating materials, 9:29496 (R;US)
Heat Flow
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
Heat Flux
Thermal flux measurements with a compensated heat flow meter, 9:28606 (BA;US)
Heat Transfer
The thermal mass-transfer coefficient and equilibrium moisture content of insulating materials, 9:28659 (BA;US)
Materials Testing
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
Moisture
The thermal mass-transfer coefficient and equilibrium moisture content of insulating materials, 9:28659 (BA;US)
Performance
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Thermal flux measurements with a compensated heat flow meter, 9:28606 (BA;US)
Performance Testing
Effects of infrared radiation barriers on the effective thermal resistance of building envelopes, 9:28608 (BA;US)
Test specifications for nondestructive evaluation of foam anomalies in wall sections of TRUPACT-I, 9:28987 (R;US)
Radiant Heat Transfer
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Technology Assessment
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Thermal Conductivity
Effects of infrared radiation barriers on the effective thermal resistance of building envelopes, 9:28608 (BA;US)
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Thermal resistance of reflective insulations installed in a simulated wall cavity, 9:28621 (BA;US)
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
Thermal Efficiency
An in situ study of attic loose-fill thermal insulation in residential applications, 9:28645 (BA;US)
Effects of infrared radiation barriers on the effective thermal resistance of building envelopes, 9:28608 (BA;US)
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
The experimentally determined effectiveness of insulation added to the exterior of residential foundations, 9:28638 (BA;US)
Thermal Mass
The thermal mass-transfer coefficient and equilibrium moisture content of insulating materials, 9:28659 (BA;US)
Thermal Testing
Thermal resistance of loose-fill fiberglass insulation in spaces heated from below, 9:28635 (BA;US)
THERMAL NEUTRONS
Diffusion Length
Some results of transfer matrix calculations for thermal neutrons, 9:29877 (J;US)
Milne Problem
Some results of transfer matrix calculations for thermal neutrons, 9:29877 (J;US)
Scattering

Performance Testing
Testing of a prototype PWR design gamma thermometer for use as a local power monitor in the thimble tube of a nuclear reactor, 9:28374 (J;US)
THERMONUCLEAR POWER PLANTS
After-Heat Removal
Design criteria for afterheat removal in fusion power plants, 9:30036 (J;US)
Nuclear Pumping
A new neutron-feedback ICF driver, 9:30043 (J;US)
THERMONUCLEAR REACTIONS
(For use only with the phenomenon, not with THERMONUCLEAR REACTORS.)
Nuclear-physical aspects for thermonuclear investigations, 9:29689 (RA;SU;In Russian)
Contract Management
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Energy Policy
Impact of international cooperation in DOE's magnetic confinement fusion program, 9:28523 (R;US)
Information Dissemination
Impact of international cooperation in DOE's magnetic confinement fusion program, 9:28523 (R;US)
THERMONUCLEAR REACTOR MATERIALS
Materials Testing
Damage analysis and fundamental studies. Quarterly progress report, July-September 1983, 9:28746 (R;US)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - microstructure development, 9:28770 (R;US)
Radiation Effects
Neutron measurements and radiation damage calculations for fusion materials studies, 9:30044 (J;US)
Research Programs
Damage analysis and fundamental studies. Quarterly progress report, October-December 1983, 9:29996 (R;US)
Shear
Shear punch tests for mechanical property measurements in TEM disc-sized specimens, 9:28754 (RA;US)
Swelling
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - microstructure development, 9:28770 (R;US)
Lithium shell effect and its impact on microscopy determinations of swelling behavior, 9:28757 (RA;US)
Technology Assessment
Magnetic fusion energy plasma interactive and high heat flux components. Volume I. Technical assessment of the critical issues and problem areas in the plasma materials interaction field, 9:30025 (R;US)
Voids
Conditions for the suppression of void formation during ion-bombardment, 9:28758 (RA;US)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.

THREE MILE ISLAND-2 REACTOR
Alpha-Bearing Wastes
TMI abnormal wastes disposal options, 9:27943 (R;US)
Corium
Proposed methods for defueling the TMI-2 reactor core, 9:28417 (R;US)
Radioactive Waste Disposal
EPICOR II Research and Disposition Program: FY-1983 annual report (Prefilter liners from TMI-2), 9:28277 (R;US)
Reactor Cores
Design and operation of the core topography data acquisition system for TMI-2, 9:28416 (R;US)
Reactor Instrumentation
TMI-2 pressure transmitter examination and evaluation of CF-1-PT1, CF-2-LT1, and CF-2-LT2. Volume 2, 9:28418 (R;US)
Recovery
Progress in the recovery operations at Three Mile Island Unit 2, 9:28465 (J;US)
Ultrasonic Testing
Design and operation of the core topography data acquisition system for TMI-2, 9:28416 (R;US)

THYROID
Biological Radiation Effects
^{211}At radiocolloid therapy: further observations and comparison with radiocollocis of ^{32}P, ^{165}Dy, and ^{90}Y, 9:29458 (J;US)
Scintiscanning
Results of scintigraphic goiter diagnostics of 1975 and 1976, 9:29386 (R;DE;In German)

TIL OIL
See SESAME OIL

TIN
Critical Current
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Fabrication
High field performance of superconducting magnets using powder metallurgy processed Cu-Nb-Sn and Nb-Al, 9:28796 (J;US)
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)

TIN COMPOUNDS
Optical Properties
Optical properties of diffusion-produced AuSn, 9:28797 (J;US)

TIRES
Pyrolysis
Chemical reclamation of scrap rubber. Final report, 9:28033 (R;US)

TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Deposition
Preparation of barium titanate films using sol-gel techniques, 9:28836 (R;US)
Electrical Properties
Preparation of barium titanate films using sol-gel techniques, 9:28836 (R;US)

TITANIUM
Activation Analysis
Nondestructive analysis of oil shales with PGNAA technique, 9:27889 (R;US)
Corrosion
Chemistry Division annual progress report for period ending January 31, 1984, 9:30055 (R;US)
Debye Temperature
Debye temperature of Ti in TiO_2, TiH_2 and TiC, 9:28780 (RA;IL)
Ultrasonic Testing
Measurements of ultrasonic scattering from near-surface flaws, 9:29037 (BA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)

TITANIUM 48 TARGET
Oxygen 16 Reactions
Description of heavy-ion scattering by direct multistep reaction in the region between quasielastic and deep-inelastic reactions, 9:29747 (RA;DE;In German)

TITANIUM 50
Nuclear Radii
Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering, 9:29825 (R;DE)

TITANIUM 50 TARGET
Alpha Reactions
Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering, 9:29825 (R;DE)

TITANIUM ALLOYS

INCONEL 706
NIMONIC PE16

RENE-100
Cracks
Crack mapping by ray methods, 9:29034 (BA;US)
TITANIUM BORIDES
Fabrication
Structure-property correlations for TiB_2-based ceramics densified using active liquid metals, 9:28809 (BA;US)
Ion Implantation
Alteration of surface properties by ion implantation, 9:28811 (BA;US)
Microstructure
Crystal chemistry and electron energy loss spectroscopy of titanium carbide precipitates in TiB_2, 9:28810 (BA;US)
Structure-property correlations for TiB_2-based ceramics densified using active liquid metals, 9:28809 (BA;US)
Phase Studies
Characterization of TiB_2-Ni ceramics by transmission and analytical electron microscopy, 9:28815 (BA;US)
Surface Properties
Alteration of surface properties by ion implantation, 9:28811 (BA;US)
Synthesis
Synthesis of submicron TiB_2 powders (1), 9:28802 (R;US)
Transmission Electron Microscopy
Characterization of TiB_2-Ni ceramics by transmission and analytical electron microscopy, 9:28815 (BA;US)
TITANIUM CARBIDES
Precipitation
Crystal chemistry and electron energy loss spectroscopy of titanium carbide precipitates in TiB_2, 9:28810 (BA;US)
TITANIUM NITRIDES
Sputtering
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
Surface Properties
Surface states on ZrN and TiN, 9:28804 (RA;AT)
TMR REACTORS
Technology Assessment
d-d Tandem mirror reactor assessment, 9:30020 (RA;US)
TMX DEVICES
ICR Heating
ICRF heating in the Tandem Mirror Experiment-Upgrade (TMX-U), 9:29957 (R;US)

Biochemical Reaction Kinetics
Repair of DNA treated with γ-irradiation and chemical carcinogens. Progress report, 1980-1983, 9:29323 (R;US)
TRANSFORMATIONS (ONCOGENIC)
See ONCOGENIC TRANSFORMATIONS
TRANSFORMERS
Solvent Extraction
PCB removal from transformers. Final report, 9:29258 (R;US)
TRANSIENT OVERPOWER ACCIDENTS
Fuel Motion Detection
Simulated fuel melt movement and relocation in two seven-pin-bundle geometries (SIMBATH out-of-pile experiments Vsub(Th) 74; Vsub(Th) 79), 9:28426 (R;DE)
Thermal Stresses
Extended overpower transient testing of oxide pins in EBR-II, 9:28396 (R;US)
TRANSIENT REACTOR TEST FACILITY
See TREAT REACTOR
TRANSIENTS
Heat Transfer
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:28409 (R;US)
Mitigation of thermal transients by tube bundle inlet plenum design (LMFBR), 9:28400 (R;US)
Thermal oscillations downstream of an elbow in stratified pipe flow, 9:28401 (R;US)
Human Factors
Nuclear power plant transients: where are we, 9:28406 (R;US)
Hydraulics
Improved time integration method for the TRAC-BD1 analytic nodal reactor kinetics equations, 9:28409 (R;US)
Mitigation of thermal transients by tube bundle inlet plenum design (LMFBR), 9:28400 (R;US)
Thermal oscillations downstream of an elbow in stratified pipe flow, 9:28401 (R;US)
Mathematical Models
Nuclear power plant transients: where are we, 9:28406 (R;US)
Risk Assessment
Nuclear power plant transients: where are we, 9:28406 (R;US)
TRANSITION RADIATION DETECTORS
For detection of transition radiation emitted by particles going from one medium to another.
Particle Identification
Efficiency of high-energy particle identification statistical methods, 9:29123 (R;SU)
TRANSMISSION (DATA)
See DATA TRANSMISSION
TRANSMISSION (ENERGY)
See ENERGY TRANSPORT
TRANSMISSION (HEAT)
See HEAT TRANSFER
TRANSMISSION LINES
See POWER TRANSMISSION LINES
TRANSPIRATION
Use for botanical systems only.
Mathematical Models
Parameterizations of evapotranspiration and sensible heat flux from field grass, 9:29185 (RA;US)
TRANSPLUTONIUM ELEMENTS

TRITIUM
Binding Energy
Structure of the $^{3}H \rightarrow n+d(d/sup\ /)$ vertexes, 9:29713 (J;US)
Breeding
Tritium breeding materials, 9:29987 (R;US)
Catalytic Effects
Tritium catalyzed deuterium (TCD) tokamaks, 9:30041 (J;US)
Production
Fissionable blankets for inertial confinement fusion production of tritium, 9:30042 (J;US)
Radioactive Waste Processing
Treatment and disposal of tritiated effluents. Technology and safety, 9:27924 (R;DE;In German)
Radioactive Waste Storage
Treatment and disposal of tritiated effluents. Technology and safety, 9:27924 (R;DE;In German)
Radioecological Concentration
Tritium concentrations measured in samples of precipitation and streams in 1963 and 1964, 9:29247 (R;US)
Scattering Lengths
Structure of the $^{3}H \rightarrow n+d(d/sup\ /)$ vertexes, 9:29713 (J;US)
TRITIUM COMPOUNDS
See also TRITIUM OXIDES
Biological Localization
Localization and therapeutic potential of tritiated tetracycline in rodent tumors, 9:29398 (J;US)
TRITIUM OXIDES
Uses
A study of water in glass by an autoradiographic method that utilizes tritiated water, 9:28850 (BA;US)
TRITIUM TARGET
Four-Body Problem
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Neutron Reactions
Structure of the $^{3}H \rightarrow n+d(d/sup\ /)$ vertexes, 9:29713 (J;US)
Study on the continuum spectrum states in the four-nucleon system, 9:29706 (RA;SU;In Russian)
Photonuclear Reactions
Measurement of coherent pion-photoproduction on the $^{3}He/^{3}H$ isodublett, 9:29696 (R;DE)
Triton Reactions
Plasma energy deposition from the nuclear elastic scattering of tritons on tritons, 9:29953 (R;US)
TRITON REACTIONS
Elastic Scattering
Plasma energy deposition from the nuclear elastic scattering of tritons on tritons, 9:29953 (R;US)
Pairing Interactions
Study on the role of two-and multi-particle interactions in low-nucleon systems, 9:29703 (RA;SU;In Russian)
Stripping
^{43}K from the $^{41}K(t,p)$ reaction, 9:29748 (RA;IL)
TRITONS
Decay
Coulomb interaction effect on the exchange amplitude singularities and the $d \rightarrow p + n$ nuclear vertex constant from the analysis of the $p + d$ elastic backscattering, 9:29707 (RA;SU;In Russian)
TROPOSPHERE
Mathematical Models
Simulations of mesoscale motions over Lake Michigan with a planetary boundary layer model, 9:29182 (RA;US)
TRU WASTES
See ALPHA-BEARING WASTES
TRX-1
See REVERSE-FIELD PINCH
TRYPSIN
Code number 3.4.21.4.
Deuteration
Use of the neutron diffraction - H/D exchange technique to determine the conformational dynamics of trypsin, 9:28928 (R;US)
Molecular Structure
Use of the neutron diffraction - H/D exchange technique to determine the conformational dynamics of trypsin, 9:28928 (R;US)
Neutron Diffraction
Use of the neutron diffraction - H/D exchange technique to determine the conformational dynamics of trypsin, 9:28928 (R;US)
TSL PROCESS
Organic Solvents
Advanced research for the characterization of hydrogen donor solvents in two-stage liquefaction. Quarterly report, January 1-March 31, 1984, 9:27766 (R;US)
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Two-Phase Flow
Experimental investigation of interfacial shear in downward, two-phase, annular, co-current flow with diameter effects, 9:28137 (R;US)
TUBES (CONDUITS)
See PIPES
TUFF
Mechanical Properties
Ambient temperature testing of the G-tunnel heated block, 9:27955 (R;US)
Stress Analysis
Ambient temperature testing of the G-tunnel heated block, 9:27955 (R;US)
TUMOR CELLS
Biological Radiation Effects
Effect of alkali on the size dispersity of mammalian DNA measured by filter elution, 9:29459 (J;US)
Cell Cycle
Variability in DNA distributions of human neuroblastomas after cyclophosphamide, 9:29360 (J;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Brazed Joints
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
Chemical Vapor Deposition
CVD refractory metals and alloys for space nuclear power application, 9:28738 (RA;US)
TUNGSTEN 176
Energy Levels
γ-γ energy correlations and the moments of inertia in ^{176}W, 9:29786 (J;US)
Moment of Inertia
γ-γ energy correlations and the moments of inertia in ^{176}W, 9:29786 (J;US)
TUNGSTEN ALLOYS
See also HASTELLOY X
TUNGSTEN BASE ALLOYS

Brazed Joints
Sodium compatibility of refractory metal alloy/304L braze joints, 9:28793 (R;US)
Chemical Vapor Deposition
CVD refractory metals and alloys for space nuclear power application, 9:28738 (RA;US)
Magnetization
Irreversible magnetization in Co-W thin films, 9:28784 (RA;IL)
Mechanical Properties
Processing and production of molybdenum and tungsten alloys, 9:28737 (RA;US)
Processing
Processing and production of molybdenum and tungsten alloys, 9:28737 (RA;US)
Production
Processing and production of molybdenum and tungsten alloys, 9:28737 (RA;US)
TUNGSTEN BASE ALLOYS
Welding
Welding of refractory alloys, 9:28740 (RA;US)
TURBINE BLADES
Aerodynamics
Present research advances in coal-burning gas turbines, 9:28692 (J;US)
Corrosion
Present research advances in coal-burning gas turbines, 9:28692 (J;US)
Service Life
A modern alternative to oil-fired ships, 9:28709 (J;US)
Thermodynamics
Present research advances in coal-burning gas turbines, 9:28692 (J;US)
TURBOJET ENGINES
Exploratory development of reduced length turbo-propulsion combustion systems. Part II. Component design and development. Technical report 1 Jan 68-30 Sep 70, 9:28697 (R;US)

URANIUM
See also ENRICHED URANIUM
NATURAL URANIUM
Adsorption
Use of natural radionuclides to predict the behavior of radwaste radionuclides in far-field aquifiers, 9:27974 (R;US)
Availability
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
Bioassay
Analysis of uranium urinalysis and in vivo measurement results from eleven participating uranium mills, 9:27980 (R;US)
Biological Effects
Plant uptake assay to determine bioavailability of inorganic contaminants, 9:29502 (J;NL)
Calibration Standards
Certification of a uranium metal reference material for chemical analyses, 9:28880 (R;US)
Chemical Analysis
Analytical methods associated with the recovery of uranium, 9:27896 (R;US)
Equations of State
Theoretical equation of state for uranium, 9:28727 (R;FR)
Gamma Radiography
Radiographic and radioscopic testing of coatings with a high absorption coefficient, 9:29026 (R;FR;In French)
Grain Size
Ultrasonic determination of grain size in uranium, 9:28795 (R;US)
Intestinal Absorption
Gastrointestinal absorption of uranium in man, 9:29286 (RA;US)
Solvent Extraction
Evidence and consequences of inner sphere hydrogen bonding between ligands in some mixt complexes of actinide and lanthanide, 9:28967 (R;FR)
X-Ray Radiography
Radiographic and radioscopic testing of coatings with a high absorption coefficient, 9:29026 (R;FR;In French)
Radiography of heavy materials with a 420 kV X ray generator, 9:29023 (R;FR;In French)
URANIUM 233
E0-Transitions
Theory of a monopole transition of the ^{233}U nucleus (340 kev, $5/2^+ \rightarrow 5/2^+$), 9:29799 (RA;SU;In Russian)
Excretion
Gastrointestinal absorption and retention of plutonium and uranium in the baboon, 9:29427 (RA;US)
Ion Exchange Chromatography
Radiochemical method for the simultaneous determination of ^{233}U, ^{236}U, ^{237}Np, ^{236}Pu, ^{238}Pu, and ^{239}Pu in biological materials, 9:29428 (RA;US)
URANIUM 235
Isotope Separation
Isotope separation by rotating plasmas, 9:27898 (R;BR;In Portuguese)
URANIUM 235 TARGET
Neutron Reactions
Lifetime of ^{236}U and ^{239}U compound nuclei and determination of statistical calculation parameters, 9:29801 (RA;SU;In Russian)
Structure exclusion for heavy fragmentation of atomic nucleWs, 9:29802 (RA;SU;In Russian)
URANIUM 236
Compound Nuclei
Lifetime of ^{236}U and ^{239}U compound nuclei and determination of statistical calculation parameters, 9:29801 (RA;SU;In Russian)
Excretion
Gastrointestinal absorption and retention of plutonium and uranium in the baboon, 9:29427 (RA;US)
Ion Exchange Chromatography
Radiochemical method for the simultaneous determination of ^{233}U, ^{236}U, ^{237}Np, ^{236}Pu, ^{238}Pu, and ^{239}Pu in biological materials, 9:29428 (RA;US)
URANIUM 238
Internal Conversion
Effect of nonaxiality of a nucleus on muon conversion coefficients, 9:29800 (RA;SU;In Russian)
Isotope Separation
Isotope separation by rotating plasmas, 9:27898 (R;BR;In Portuguese)
Neutron Transport
Report to the ^{238}U discrepancy task force on SIOB fits to the ORNL, CBNM, and JAERI transmission data, 9:29875 (R;US)
URANIUM 238 REACTIONS
Fission
Angular correlations between target and projectile fragments emitted from ^{238}U + Ag(Br) collisions at 0.85 A GeV, 9:29773 (RA;US)

URANIUM 238 TARGET
Deuteron Reactions
Modification of boundary conditions in an optical scattering model, 9:29752 (RA;SU;In Russian)
Neon 20 Reactions
Cluster approach to intranuclear cascade for relativistic heavy ion collisions, 9:29797 (R;BR)
Neutron Reactions
Lifetime of ^{236}U and ^{239}U compound nuclei and determination of statistical calculation parameters, 9:29801 (RA;SU;In Russian)
URANIUM 239
Compound Nuclei
Lifetime of ^{236}U and ^{239}U compound nuclei and determination of statistical calculation parameters, 9:29801 (RA;SU;In Russian)
URANIUM CHLORIDES
Catalytic Effects
Low valent actinides as hydrogenation catalysts, 9:28041 (J;US)
Chemical Reactions
Low valent actinides as hydrogenation catalysts, 9:28041 (J;US)
URANIUM CONCENTRATES
Biological Half-Life
Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983, 9:29439 (R;US)
Chemical Properties
Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983, 9:29439 (R;US)
Tissue Distribution
Biological characterization of radiation exposure and dose estimates for inhaled uranium milling effluents. Annual progress report April 1, 1982-March 31, 1983, 9:29439 (R;US)
URANIUM DEPOSITS
Prospecting
Data release for parts of the eastern Adel quadrangle, Oregon, 9:27895 (R;US)
URANIUM DIOXIDE
Fabrication
Characteristics of mixed oxide fuel pellets and the respective source products, 9:28308 (RA;DE;In German)
Fission Product Release
Release of volatile fission products from UO_2, 9:28358 (R;US)
URANIUM HEXAFLUORIDE
Mass Spectroscopy
Chemistry of gaseous lower-valent actinide halides. Technical progress report, 9:28902 (R;US)
Sampling
Temperature measurement and sampling probes for the UF_6 homogenization study, 9:27900 (R;US)
UF_6 cylinder homogenization study: Experimental result with a 10-ton cylinder, 9:27899 (R;US)

Freshwater findings, 1979-1982: research publications of the Environmental Research Laboratory, Duluth, Minnesota, 9:29284 (R;US)

US NRC
United States Nuclear Regulatory Commission-prior to 1975 was part of US AEC.
Improving quality and the assurance of quality in the design and construction of nuclear power plants: a report to Congress, 9:28331 (R;US)
Public Information
Title list of documents made publicly available, January 1-31, 1984. Vol. 6, No. 1, 9:28526 (R;US)
Reactor Licensing
Operating reactors licensing actions summary. Vol. 4, No. 3, 9:28330 (R;US)
Regulations
Regulatory analysis guidelines of the US Nuclear Regulatory Commission. Revision 1, 9:28333 (R;US)
Title List of Documents Made Publicly Available, 9:28527 (R;US)

USA
See also FEDERAL REGION X
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume III. Technology assessment and RD and D needs (List of organizations involved and, in some cases, processing flowsheets), 9:27829 (R;US)
Bilateral Agreements
Science and technology: cooperation between and United States and China. Hearings before the Special Subcommittee on US Trade with China, Ninety-Eighth Congress, first session, October 31, November 3, 1983, 9:28520 (B;US)
Boilers
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume II. Potential utilization (By country, number, capacity (MWe) and age, utilities and industrial design), 9:27828 (R;US)
Assessment of coal-liquid mixtures in cooperating IEA countries. Volume I. Summary (Number and total MWe of boilers less than 20 years old by country cooperating), 9:27827 (R;US)
BWR Type Reactors
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Double Envelope Buildings
Evaluation of current guidelines of good practice for condensation control in insulated building envelopes, 9:28602 (BA;US)
Energy Models
Econometrics and data of the 9 sector Dynamic General Equilibrium Model. Volume III. Final report , 9:28495 (R;US)
Nine sector Dynamic General Equilibrium Model: specification and structure. Volume II. Final report , 9:28494 (R;US)
Overview of the 9 sector Dynamic General Equilibrium Model. Volume I. Final report , 9:28493 (R;US)
Energy Policy
Federal incentives for energy development, 9:28538 (J;US)
Energy Source Development
Federal incentives for energy development, 9:28538 (J;US)
Fossil-Fuel Power Plants
Coal-fired plants project retirement plan, 9:28253 (R;US)
Harbors
Coal port analysis, 9:27820 (R;US)
Western US steam coal exports to the Pacific Basin: port and marine task group (Data on 26 possible Western USA ports and terminal facilities), 9:27823 (R;US)
HTGR Type Reactors
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Nuclear Power Plants
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Licensee event report (LER) compilation. Volume 3, Number 3, 9:28435 (R;US)
Oil Sand Deposits
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
Petroleum
Federal enhanced oil recovery research: increased understanding of the 300-billion-barrel US residual oil resource and the technologies to produce it, 9:27846 (R;US)
PWR Type Reactors
Licensed operating reactors. Status summary report as of February 29, 1984. Volume 8, No. 3, 9:28265 (R;US)
Radioactive Waste Disposal
Management and disposal of alpha-contaminated wastes: a survey of current practices, strategies and R and D activities in some EC countries and the USA, 9:27948 (R;US)
Radioactive Waste Management
Management and disposal of alpha-contaminated wastes: a survey of current practices, strategies and R and D activities in some EC countries and the USA, 9:27948 (R;US)
Research Programs
Assessment of coal-liquid mixtures in cooperating IEA countries. Executive summary, 9:27830 (R;US)
Terminal Facilities
Coal port analysis, 9:27820 (R;US)
Western US steam coal exports to the Pacific Basin: port and marine task group (Data on 26 possible Western USA ports and terminal facilities), 9:27823 (R;US)
Trade
Science and technology: cooperation between and United States and China. Hearings before the Special Subcommittee on US Trade with China, Ninety-Eighth Congress, first session, October 31, November 3, 1983, 9:28520 (B;US)
Wind
United States average wind power by season, 9:28236 (R;US)

USSR
Arctic Regions
Geology and petroleum resources of basins in the Asian Arctic and offshore East Greenland, 9:27844 (R;US)
Government Policies
Soviet programme for peace and the West European peace movements, 9:28528 (R;US)

UTAH
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)

UTERINE CERVIX CARCINOMA
See CARCINOMAS

UTERUS
Pathological Changes
Early embryonic lethality induced by seed oils in female mice treated prior to insemination, 9:29482 (RA;US)

UTILITIES
See ELECTRIC UTILITIES
GAS UTILITIES

UVVVR
Ustavu pro Vyzkum, Vyrobu a Vyuziti Radioisotopu - Institute for the Research, Production and Application of Radioisotopes, Prague.
Historical Aspects
History and presence of Institute for Research, Production and Applications of Radioisotopes, 9:30061 (RA;CS;In Russian)
Personnel Dosimetry
Personnel dosimetry, 9:29126 (RA;CS;In Russian)

Research Programs
60 years of the Institute for Research, Production and Application of Radioisotopes, 9:30060 (R;CS;In Russian)
Scientific and technical development and international cooperation, 9:30062 (RA;CS;In Russian)

V

VACUUM SYSTEMS
Gas Analysis
RGA system for the NSLS, 9:29091 (R;US)
VACUUM ULTRAVIOLET RADIATION
See FAR ULTRAVIOLET RADIATION
VAGINA
See FEMALE GENITALS
VALENCE ELECTRONS
See ELECTRONS
VALVES
Performance
Performance of pressure control butterfly valves in the Grimethorpe PFBC (Pressurized fluidized-bed combustor), 9:27835 (J;US)
VANADIUM
Chemical Analysis
Analytical methods associated with the recovery of uranium, 9:27896 (R;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
VANADIUM 51
Nuclear Radii
Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering, 9:29825 (R;DE)
VANADIUM 51 TARGET
Alpha Reactions
Nuclear densities of 1fsub(7/2) nuclei from elastic alpha-particle scattering, 9:29825 (R;DE)
VANADIUM COMPOUNDS
See also VANADIUM HYDRIDES
VANADIUM OXIDES
Dimerization
Dimerization of aquadioxovanadium(V) ion in concentrated perchloric and sulfuric acid media, 9:28923 (J;US)
VANADIUM HYDRIDES
Order-Disorder Transformations
Microstructural studies of hydrogen and deuterium in bcc refractory metals. Final technical report , 9:28803 (R;US)
VANADIUM MINERALS
See MINERALS
VANADIUM OXIDES
Chemical State
Dimerization of aquadioxovanadium(V) ion in concentrated perchloric and sulfuric acid media, 9:28923 (J;US)
VAPORIZATION
See EVAPORATION
VAPORS
See also WATER VAPOR
Entropy
Predictions of entropies of molecules and liquids, 9:28900 (R;US)
Gas Chromatography
Application of internal standards in routine vapor measurements by gas chromatography, 9:29226 (J;US)
On-Line Measurement Systems
Application of internal standards in routine vapor measurements by gas chromatography, 9:29226 (J;US)
VAX COMPUTERS
See DEC COMPUTERS
VEGETATION

W BOSON
See INTERMEDIATE BOSONS

WALLS
Comparative Evaluations
Effect of relative placement of thermal mass and insulation on building energy use, 9:28625 (BA;US)
Computerized Simulation
Correlation/prediction of wall heat flow: Computer models versus field data, 9:28626 (BA;US)
Thermal resistance of reflective insulations installed in a simulated wall cavity, 9:28621 (BA;US)
Damage
The Kieper and MOISTWALL moisture analysis methods for walls, 9:28603 (BA;US)
Field Tests
Correlation/prediction of wall heat flow: Computer models versus field data, 9:28626 (BA;US)
Fluid Flow
A study of moisture migration and accumulation in residential stud walls, 9:28628 (BA;US)
Heat Flow
Correlation/prediction of wall heat flow: Computer models versus field data, 9:28626 (BA;US)
Moisture
A study of moisture migration and accumulation in residential stud walls, 9:28628 (BA;US)
The Kieper and MOISTWALL moisture analysis methods for walls, 9:28603 (BA;US)
R Factors
Economical high R-value brick walls for housing, 9:28631 (BA;US)
Retrofitting
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Thermal Conductivity
Thermal resistance of reflective insulations installed in a simulated wall cavity, 9:28621 (BA;US)
Thermal Efficiency
Calibrated hot box tests of thermal performance of concrete walls, 9:28623 (BA;US)
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)
Economical high R-value brick walls for housing, 9:28631 (BA;US)
Evaluation of thermal insulating shutters by means of a guarded/calibrated hot box facility, 9:28641 (BA;US)
Thermal Insulation
Effect of relative placement of thermal mass and insulation on building energy use, 9:28625 (BA;US)
Effect of insulating crawlspace walls in residential structures, 9:28640 (BA;US)
Retrofitted wall insulation: A state-of-the-art review, 9:28639 (BA;US)
Thermal resistance of reflective insulations installed in a simulated wall cavity, 9:28621 (BA;US)
Thermal Mass
Effect of relative placement of thermal mass and insulation on building energy use, 9:28625 (BA;US)
Thermal Testing
Calibrated hot box tests of thermal performance of concrete walls, 9:28623 (BA;US)
Dynamic thermal performance of walls and ceilings/attics, 9:28622 (BA;US)
Evaluation of thermal insulating shutters by means of a guarded/calibrated hot box facility, 9:28641 (BA;US)
Vapor Condensation
A study of moisture migration and accumulation in residential stud walls, 9:28628 (BA;US)

WASHERS, CLOTHES
See CLOTHES WASHERS

WASHINGTON
Geology
Geological and geothermal investigation of the lower Wind River valley, southwestern Washington Cascade Range, 9:28193 (R;US)
Geothermal Resources
Fluid-temperature logs for selected wells in eastern Washington, 9:28202 (R;US)
Geological and geothermal investigation of the lower Wind River valley, southwestern Washington Cascade Range, 9:28193 (R;US)
Low temperature geothermal resource evaluation of the Moses Lake-Ritzville-Connell area, Washington, 9:28192 (R;US)
Geothermal Wells
Low temperature geothermal resource evaluation of the Moses Lake-Ritzville-Connell area, Washington, 9:28192 (R;US)
Gravity Surveys
Preparation of residual gravity maps for the southern Cascade Mountains, Washington using Fourier analysis, 9:28200 (R;US)
Principal facts and a discussion of terrain correction methods for the complete Bouguer gravity anomaly map of the Cascade Mountains, Washington, 9:28201 (R;US)
Temperature Logging
Fluid-temperature logs for selected wells in eastern Washington, 9:28202 (R;US)
Well Logging
Geophysical logs from water wells in the Yakima area, Washington, 9:28203 (R;US)
Geophysical logs of selected wells in eastern Washington, 9:28204 (R;US)

WASTE DISPOSAL
See also GROUND DISPOSAL
MARINE DISPOSAL
RADIOACTIVE WASTE DISPOSAL
SANITARY LANDFILLS
Contract Management
Exploratory energy research program at the University of Michigan, 9:28515 (R;US)
Environmental Impacts
Effects of hazardous wastes on housing and urban development and mitigation of impacts, 9:29283 (R;US)
Evaluation
Research planning task group study-thermal destruction. Final report, 9:29214 (R;US)
Research Programs
Earth sciences, 9:29273 (RA;US)

WASTE FORMS
Comparative Evaluations
Waste form development program. Annual report, October 1982-September 1983, 9:27934 (R;US)

WASTE PRODUCT UTILIZATION
Chemical Technology Division annual technical report, 1983, 9:30053 (R;US)

WASTE SOLUTIONS
See LIQUID WASTES

WASTE WATER
Chemical Analysis
Application of a spray deposition method for reversed phase liquid chromatography-mass spectrometry. Final report, 9:27790 (R;US)
Instrumental methods of analysis of sulfur compounds in synfuel process streams. Quarterly technical progress report, January-March 1984, 9:27785 (R;US)
Rapid estimation of organic nitrogen in oil shale wastewaters, 9:27893 (R;US)
Chemical Composition
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)
Denitrification
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)

Desulfurization
Simultaneous stripping and solvent extraction for the recovery of ammonia and acid gases from wastewaters, 9:27800 (R;US)
Evaporation
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)
Filtration
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Research Programs
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Solvent Extraction
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Waste Product Utilization
Preparation, characterization and flotation of colloidal coal, 9:27821 (R;US)
Water Treatment
Low-rank coal research. Quarterly technical progress report, October-December 1983, 9:27710 (R;US)
Low-rank coal research. Quarterly technical progress report, January-March 1984, 9:27724 (R;US)
Tar sand process water control technology. Draft final report, 9:27891 (R;US)
Vapor compression evaporation system design for the SRC-I coal refinery. Vol. 1, 9:27758 (R;US)
Zero-discharge study, 9:27740 (RA;US)

WATER
See also DRINKING WATER
GROUND WATER
RAIN WATER
SEAWATER
WASTE WATER
Atomization
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Evaporation
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Flow Rate
Vaporization and devolatilization of coal water sprays. Sixth quarterly report for the period ending February 11, 1984, 9:27826 (R;US)
Heat Transfer
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Neutron Transport
Some results of transfer matrix calculations for thermal neutrons, 9:29877 (J;US)
Thermodynamics
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)

WATER CHEMISTRY
Mathematical Models
Effects of cloud dynamics on cloud-water acidification, 9:29179 (RA;US)
Statistics
Determination of outliers in the weekly-versus-event precipitation chemistry study, 9:29177 (RA;US)

WATER CONTENT
See HUMIDITY
MOISTURE

WATER COOLANT
See WATER

WATER COOLED REACTORS
See also BWR TYPE REACTORS
HFIR REACTOR
LWBR TYPE REACTORS
PWR TYPE REACTORS
SGHWR REACTOR
TRIGA TYPE REACTORS
Loss of Coolant
Hydrogen behavior in light-water reactors, 9:28464 (J;US)
Meetings
Scientific research and production introduction studies of light water reactor power plants. Volume 1. Conference proceedings, 9:28260 (R;CH;In Slovak)
Scientific research and production introduction studies of light water reactor power plants. Volume 2. Conference proceedings, 9:28262 (R;CS;CZ)
Pipes
Assessment of degraded nuclear piping by experimentation and tearing instability fracture mechanics analysis, 9:28467 (J;US)
Reactor Accidents
Aerosol release and transport program. Quarterly progress report, July-September 1983, 9:28440 (R;US)

WATER DISTRIBUTION
See WATER SUPPLY

WATER HEATERS
See also SOLAR WATER HEATERS
Computerized Simulation
Solar/gas water heater characterization and development. Final report, November 81-Jun 83, 9:28169 (R;US)

WATER HYACINTHS
Gasification
Thermochemical gasification of high-moisture biomass feedstocks, 9:28037 (R;US)

WATER MODERATOR
See WATER

WATER POLLUTION
Biological Effects
Pollutant body burdens and reproduction in Platichthys stellatus from San Francisco Bay. Annual progress report, year I, 9:29500 (R;US)
Tracer Techniques
Determination of the self purification of streams using tracers, 9:29287 (R;BR;In Portuguese)

WATER QUALITY
Monitoring
Strategic Petroleum Reserve annual environmental monitoring report, 1983, 9:27866 (R;US)

WATER RESERVOIRS
Aeration
Effect of hydro turbine air venting on generating efficiency, dissolved oxygen uptake, and turbine vibrations, 9:28058 (R;US)
Water Quality
Effects of a runoff event on Normandy Reservoir water quality, 9:29302 (R;US)
Modeling taste and odor phytoplankton in Normandy Reservoir, 9:29291 (R;US)

WATER SOLUTIONS
See AQUEOUS SOLUTIONS

WATER SOURCE HEAT PUMPS
Groundwater heat pumps in Colorado: an efficient and cost-effective way to heat and cool your home. Special publication 18, 9:28579 (R;US)

WATER SPRINGS
See also MINERAL SPRINGS
Water Chemistry
Thermal data for springs and wells, 9:28220 (RA;US)

WATER SUPPLY
Used in the sense of a public utility or of an engineered system (e.g., irrigation system) as contrasted to a natural system, for which use WATER RESOURCES.
Water Quality
Microsystem sediment-water simulation: a practical technique for predicting reservoir water quality, 9:29308 (R;US)

WATER TREATMENT
Ion Exchange
Sulfate removal by anion exchange against bicarbonate ions, 9:29298 (R;DE;In German)

WATER VAPOR
Agglomeration
Vibrational spectra of chemisorbed molecular clusters: H_2O on Ru(001), 9:28844 (J;US)
Chemisorption
Vibrational spectra of chemisorbed molecular clusters: H_2O on Ru(001), 9:28844 (J;US)

Flux Density
Sulfur dioxide, carbon dioxide, and water vapor flux measurements utilizing a microprocessor controlled data acquisition system in a pine plantation. Rev. 2, 9:29206 (R;US)
WATER WELLS
Water Chemistry
Thermal data for springs and wells, 9:28220 (RA;US)
Well Logging
Geophysical logs from water wells in the Yakima area, Washington, 9:28203 (R;US)
Geophysical logs of selected wells in eastern Washington, 9:28204 (R;US)
WATERBORNE PARTICLES
See PARTICULATES
WATERSHEDS
Acidification
Rocky Mountain acidification study, 9:29259 (R;US)
WATTS BAR-1 REACTOR
Environment
Environmental radioactivity levels, Watts Bar Nuclear Plant. Annual report, 1983, 9:28383 (R;US)
Reactor Maintenance
Watts Bar preventive maintenance program. Lectures 28.8.1-3, 9:28288 (R;US)
WATTS BAR-2 REACTOR
Environment
Environmental radioactivity levels, Watts Bar Nuclear Plant. Annual report, 1983, 9:28383 (R;US)
Reactor Maintenance
Watts Bar preventive maintenance program. Lectures 28.8.1-3, 9:28288 (R;US)
WAVE PACKETS
Trajectories
Comparisons of classical and quantum dynamics for initially localized states, 9:29910 (J;US)
WAVE POWER
Research Programs
Ocean Energy Technology Program summary, FY 1980-1983, 9:28134 (R;US)
WAVE PROPAGATION
Finite Element Method
Finite element method for treating nearly one way wave propagation, 9:29887 (R;US)
Mathematical Models
Body and surface wave modeling of observed seismic events. Final report 1 May-31 Oct 82, 9:29171 (R;US)
WAVEGUIDES
Wave Propagation
Finite element method for treating nearly one way wave propagation, 9:29887 (R;US)
WAVES (SHOCK)
See SHOCK WAVES
WAZ 16
See NICKEL BASE ALLOYS
WEAK BOSON
See INTERMEDIATE BOSONS
WEAK NEUTRAL CURRENTS
Measurement of the ratio sigma(νsub(μ)e→νsub(μ)e)/sigma(anti νsub(μ)e→anti νsub(μ)e), 9:29593 (RA;HU)
WEAR RESISTANCE
Research Programs
Investigation of role of subsurface zones in wear of materials. Progress report, June 1, 1983-May 31, 1984, 9:28764 (R;US)
WEATHER
Forecasting
Exploitation of ground climate for energy efficient building design, 9:28660 (J;US)
WECS
See WIND TURBINES
WEGA STELLARATOR
Boundary Layers
Experimental measurements and modelling of the WEGA boundary layer plasma, 9:29928 (R;FR)
Plasma Simulation
Experimental measurements and modelling of the WEGA boundary layer plasma, 9:29928 (R;FR)
WEINBERG LEPTON MODEL
Mixing Ratio
Preliminary results on νsub(μ)+e⁻→νsub(μ)+e⁻, 9:29592 (RA;HU)
Reviews
Structure of electroweak interactions, 9:29595 (RA;HU)
WEINBERG MODEL
See WEINBERG LEPTON MODEL
WELDED JOINTS
See also BRAZED JOINTS
Chemical Analysis
Atomprobe-analysis of interfaces and grain boundaries in stainless steel welds, 9:28776 (RA;AT)
Fracture Properties
J-R curve characterization of irradiated low upper shelf welds, 9:2878⁹ (R;US)
Physical Radiation Effects
J-R curve characterization of irradiated low upper shelf welds, 9:28788 (R;US)
Ultrasonic Testing
European contribution to PISC 1 program - alternate US PISC procedure (Program of Inspection for Steel Components), 9:28345 (R;FR)
WELDS
See WELDED JOINTS
WELL CASINGS
Thermal Insulation
Insulating geothermal well casings from thermal stress with nitrogen gas or nitrogen foam, 9:28226 (R;US)
Thermal Stresses
Insulating geothermal well casings from thermal stress with nitrogen gas or nitrogen foam, 9:28226 (R;US)
WELL COMPLETION
Well completion report - dissolution zone water wells (PD-8, PD-11, PD-12, PD-13), Palo Duro Basin, Texas: unanalyzed data, 9:27926 (R;US)
WELL DRILLING
Research Programs
Suggested drilling research tasks for the Federal Government, 9:28230 (R;US)
WELL LOGGING
See also ELECTRIC LOGGING
Explosions
Microexplosions in boreholes (mikroexplosioner i borrhael), 9:29161 (R;US)
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Geoscience experiments in boreholes: instrumentation, 9:28223 (R;US)
WENDELSTEIN-7 STELLARATOR
ECR Heating
Proposed 60 GHz transmission line system for ECRH on W VII-AS, 9:30001 (R;DE)
WEST GERMANY

WIND TURBINES
WIND POWER
Bibliographies
Bibliography: wind power, 9:28233 (R;US)
Economic Analysis
Wind energy in southwest Missouri: economic potential of utilizing large wind energy conversion systems. Final report, 9:28238 (R;US)
Research Programs
Wind turbine performance assessment. Technology status report No. 7. Final report, 9:28241 (R;US)
Site Surveys
Regional Wind Energy Assessment Program progress report, October 1982-September 1983. Appendix. Wind statistics summaries, 9:28235 (R;US)
Regional Wind Energy Assessment Program progress report, October 1982-September 1983, 9:28234 (R;US)
Time Dependence
Method-of-bins update, 9:28248 (BA;US)
WIND POWER PLANTS
Meteorology
Meteorological investigations at the wind test site Pellworm (SWECS), 9:29187 (R;DE)
WIND TURBINES
Field Tests
Method-of-bins update, 9:28248 (BA;US)
Interconnected Power Systems
Model study of a wind turbine driven heat pump, 9:28245 (BA;US)
Modifications
Model study of a wind turbine driven heat pump, 9:28245 (BA;US)
Performance Testing
Wind turbine performance assessment. Technology status report No. 7. Final report, 9:28241 (R;US)
Safety Engineering
High wind loading of parked SWECS rotors: preliminary data, 9:28247 (BA;US)
Site Selection
Overview of wind turbine siting considerations, 9:28243 (R;US)
Technology Assessment
Wind turbine performance assessment. Technology status report No. 7. Final report, 9:28241 (R;US)
Water Heaters
Model study of a wind turbine driven heat pump, 9:28245 (BA;US)
WINDOWS
Comparative Evaluations
Air flow windows: Performance and applications, 9:28616 (BA;US)
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Daylighting
New models for analyzing the thermal and daylighting performance of fenestration, 9:28614 (BA;US)
Double Glazing
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Energy Conservation
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Heat Gain
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)
Heat Recovery
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Market
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Solar Architecture
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Sun Shades
Solar heat gain through single glass-blind fenestrations, 9:28613 (BA;US)
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
Test Facilities
A mobile facility for measuring net energy performance of windows and skylights, 9:28601 (BA;IE)
Thermal Efficiency
A mobile facility for measuring net energy performance of windows and skylights, 9:28601 (BA;IE)
Air flow windows: Performance and applications, 9:28616 (BA;US)
New models for analyzing the thermal and daylighting performance of fenestration, 9:28614 (BA;US)
Solar heat recovery from windows in light-frame wood construction, 9:28637 (BA;US)
Thermal Insulation
Glazing optimization for energy efficiency in commercial office buildings, 9:28600 (BA;IE)
Review of gas-filled window technology summary report, 9:28611 (BA;US)
Thermal window louver system reduces heating and cooling loads and uses excess solar energy and building waste heat, 9:28612 (BA;US)
WOLFRAM
See TUNGSTEN
WOOD
Acid Hydrolysis
Biomass fermentation technology, Project No. 1. Final performance report. Cooperative research and training in biomass conversion and utilization, 9:28044 (R;US)
Gasification
Commercial potential of wood gasification and its application in New York state. Final report, 9:28032 (R;US)
Liquefaction
Upgrading biomass liquefaction products through hydrodeoxygenation, 9:28035 (R;US)
Pyrolysis
Flash pyrolysis of biomass with reactive and non-reactive gases, 9:28012 (R;US)

Synthesis
Flash pyrolysis of biomass with reactive and non-reactive gases, 9:28012 (R;US)
WOOD ALCOHOL
See METHANOL
WOOD WASTES
Combustion
Summary report on the wood waste utilization project under the US Department of Energy Appropriate Energy Technology Small Grants Program, 9:28051 (R;US)
Gasification
Summary report on the wood waste utilization project under the US Department of Energy Appropriate Energy Technology Small Grants Program, 9:28051 (R;US)
WORKERS
See PERSONNEL
WORKING FLUIDS
Thermal Degradation
Determination of thermal-degradation rates of some candidate Rankine-cycle organic working fluids for conversion of industrial waste heat into power, 9:28670 (R;US)
WORLD
See EARTH PLANET
WORMS (SEGMENTED)
See ANNELIDS
WYOMING
Federal Assistance Programs
Briefing materials on FmHA 601 Energy Impact Assistance Program, 9:28500 (R;US)

X

X CHROMOSOME
Prior to April 1980 this concept was indexed to HETEROCHROMOSOMES.
Non-Disjunction
Synaptonemal complex study of nonhomologous synapsis in X-autosome translocations sheds light on X-Y disjunction mechanisms, 9:29374 (RA;US)
X RADIATION
RBE
Mammalian cytogenetics, 9:29444 (RA;US)
X-CHROMOSOMES
See X CHROMOSOME
XENON
Antiproton Reactions
Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV, 9:29775 (RA;US)
Atom-Molecule Collisions
Application of fitting laws to rotationally inelastic rate constants: Li_2, 9:29574 (J;US)
Energy Levels
Evolution of energy bands in rare-gas fluids, 9:29566 (RA;IL)
Photoionization
Photoionization of xenon involving high excimers, 9:29563 (RA;IL)
Photon-Atom Collisions
Resonance ionization spectroscopy of argon, krypton, and xenon using vacuum ultraviolet light, 9:29558 (R;US)
Proton Reactions
Search for a possible deconfinement phase transition in nuclear matter by proton and anti-proton interactions with nuclei at 200 GeV, 9:29775 (RA;US)
XERODERMA PIGMENTOSUM
Genetics
Genetic dissection of DNA repair in xeroderma pigmentosum cells, 9:29369 (RA;US)
X-RAY FLUORESCENCE ANALYSIS
Calibration Standards
Chemical analysis of coal by energy dispersive x-ray fluorescence utilizing artificial standards, 9:27792 (J;US)
X-RAY RADIOGRAPHY
Contribution to industrial X-ray tomography, 9:29029 (R;FR;In French)
Radiography of heavy materials with a 420 kV X ray generator, 9:29023 (R;FR;In French)
Comparative Evaluations
Radiographic and radioscopic testing of coatings with a high absorption coefficient, 9:29026 (R;FR;In French)
Tomography
Use of a medical tomodensimeter in quality control, 9:29027 (R;FR;In French)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Pulse Techniques
PIXE and PBFA II: pulsed x-ray source feasibility study, 9:28002 (R;US)
X-RAY SPECTROMETERS
Calibration
VUV instrument calibrations for laser-plasma studies, 9:29921 (R;US)
Patents
High resolution, high rate x-ray spectrometer, 9:29975 (P;US)
Specifications
High resolution, high rate x-ray spectrometer, 9:29975 (P;US)
X-RAY SPECTROSCOPY
Research Programs
Quality engineering and control. Annual progress report, January-December 1981, 9:28882 (R;US)
X-RAY TUBES
Design
Rigid indented cylindrical cathode for x-ray tube, 9:29050 (P;US)

Y

Y CHROMOSOME
Prior to April 1980 this concept was indexed to HETEROCHROMOSOMES.
Chromosomal Aberrations
Involvement of the Y chromosome in translocations, 9:29375 (RA;US)
Genetic Mapping
Involvement of the Y chromosome in translocations, 9:29375 (RA;US)
Non-Disjunction
Synaptonemal complex study of nonhomologous synapsis in X-autosome translocations sheds light on X-Y disjunction mechanisms, 9:29374 (RA;US)
Y-12 PLANT
Land Pollution
Impact of mercury releases at the Oak Ridge complex. Hearing before the Subcommittee on Investigations and Oversight and the Subcommittee on Energy Research and Production, US House of Representatives, Ninety-Eighth Congress, first session, July 11, 1983, 9:29267 (B;US)
Water Pollution
Impact of mercury releases at the Oak Ridge complex. Hearing before the Subcommittee on Investigations and Oversight and the Subcommittee on Energy Research and Production, US House of Representatives, Ninety-Eighth Congress, first session, July 11, 1983, 9:29267 (B;US)
YANG-MILLS THEORY
Coupling Constants
Finite temperature spinor pregeometry, 9:29897 (R;IT)
Geometry
Sketch to the geometrical N=2-d=5 Yang-Mills theory over a supersymmetric group-manifold - I, 9:29661 (R;IT)
Mass
Finiteness of broken N=4 super Yang-Mills theory, 9:29659 (R;IT)
Spinor Fields
Finite temperature spinor pregeometry, 9:29897 (R;IT)

Symmetry Breaking
Finiteness of broken N=4 super Yang-Mills theory, 9:29659 (R;IT)
YELLOW CAKE
See URANIUM OXIDES U3O8
YIELD (BIOLOGICAL)
See PRODUCTIVITY
YIELD (NUCLEAR REACTION)
See NUCLEAR REACTION YIELD
YTTERBIUM
Isotope Ratio
Continuous wave lasers for resonance ionization mass spectrometry, 9:28889 (J;US)
Mass Spectra
Continuous wave lasers for resonance ionization mass spectrometry, 9:28889 (J;US)
YTTERBIUM COMPOUNDS
Crystal Structure
Bis(pentamethylcyclopentadienyl)ytterbium(II) as a Lewis acid and electron-transfer ligand: preparation and crystal structures of [Yb(Me5C5)2(μ-CO)/sub x/Mn(CO)/sub 5-x/]/sub y/ (x,y = 2; x = 3, y = ∞), 9:28823 (J;US)
Synthesis
Bis(pentamethylcyclopentadienyl)ytterbium(II) as a Lewis acid and electron-transfer ligand: preparation and crystal structures of [Yb(Me5C5)2(μ-CO)/sub x/Mn(CO)/sub 5-x/]/sub y/ (x,y = 2; x = 3, y = ∞), 9:28823 (J;US)
YTTRIUM 89 TARGET
Neutron Reactions
Radiochemical detector cross section sensitivity studies in the A ≃ 90 mass region, 9:29137 (R;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM OXIDES
Microstructure
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)

Z

ZEA MAYS
See MAIZE
ZEOLITES
Ion Exchange
Zeolite supported Ru in the F-T synthesis: effect of zeolite type, 9:28014 (RA;US)
ZERO POWER REACTORS
See also ZPPR REACTOR
Reactor Physics
Three-dimensional nodal diffusion and transport methods for the analysis of fast-reactor critical experiments, 9:28300 (R;US)
ZINC
Biological Effects
Enzyme and gene regulation: normal mechanisms and responses to toxic metal ions, 9:29337 (RA;US)
Ion Implantation
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Superconductivity
Hydrogen influence on the superconductivity of the non-transition elements, 9:28785 (R;DE;In German)
Trace Amounts
Marine sciences, 9:29290 (RA;US)
X-Ray Fluorescence Analysis
Multielement analysis of unweighed oil samples by x-ray fluorescence spectrometry with two excitation sources, 9:28888 (J;US)
ZINC 66
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Russian)
ZINC COMPLEXES
NMR Spectra
Study of hydrated zinc perchlorate [Zn/H2O/6]/ClO4/2 by NMR of broad lines, 9:28903 (RA;PL;In Polish)
ZINC OXIDES
Catalytic Effects
Decomposition of methanol, formaldehyde, and formic acid on nonpolar (1010), stepped (5051), and (0001) surfaces of ZnO by temperature-programmed decomposition, 9:28950 (J;US)
ZINC TELLURIDES
Crystal Growth
Vertical unseeded vapor growth of large Cdsub(1-x)Znsub(x)Te crystals, 9:28782 (RA;IL)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Risk Assessment
Review and evaluation of the Zion Probabilistic Safety Study, 9:28438 (R;US)
ZION-2 REACTOR
Risk Assessment
Review and evaluation of the Zion Probabilistic Safety Study, 9:28438 (R;US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 4
Corrosion
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
Defects
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
Physical Radiation Effects
Current status of fuel degradation studies in dry storage, 9:27921 (R;US)
ZIRCALOY 4
Passivation
Passivation breakdown of nickel and Zircaloy-4 in alkaline chloride solutions at 20 to 300°C, 9:28745 (R;CA)
ZIRCONIUM
Separation Processes
Review of anhydrous zirconium-hafnium separation techniques. Information circular/1984, 9:28877 (R;US)
ZIRCONIUM 88
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Russian)
ZIRCONIUM 90 TARGET
Neutron Reactions
Radiochemical detector cross section sensitivity studies in the A ≃ 90 mass region, 9:29137 (R;US)
ZIRCONIUM 92
D States
Fragmentation of two-particle states of spherical nuclei, 9:29758 (RA;SU;In Ru)
ZIRCONIUM NITRIDES
Surface Properties
Surface states on ZrN and TiN, 9:28804 (RA;AT)
ZIRCONIUM OXIDES
Microstructure
Analytical characterization of coatings and thin overlayers, 9:28807 (R;US)
ZOOPLANKTON
Biological Adaptation
Effect of food acclimation on assimilation efficiency of Calanus pacificus, 9:29413 (J;US)
Physiology
Effect of food acclimation on assimilation efficiency of Calanus pacificus, 9:29413 (J;US)
Population Density
Improved field experimental designs and quantitative evaluation of aquatic ecosystems, 9:29289 (R;US)

ZPPR REACTOR
Reactor Physics
Three-dimensional nodal diffusion and transport methods for the analysis of fast-reactor critical experiments, 9:28300 (R;US)

ZYMOMONAS MOBILIS
Growth
Bacterial cellulose fermentation. Final technical report, 9:28046 (R;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-76CS40104		
	9:28688	(1983).
AC01-76ET10620	**Department of Aerospace Engineering and Applied Mechanics University of Cincinnati, Cincinnati, Ohio**	
	9:28692	Alternative Energy Sources 6 315-332 (Dec 1980).
AC01-77ET29033	**Systems Control, Inc., Burlington, MA (USA)**

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001 or TI82000001, appears in column 3. Order numbers with DE prefixes may be used in ordering from both NTIS and TIC. Numbers with TI prefixes are valid at TIC only. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Technical Information Center (TIC); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

ORDER NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by order number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and TIC accession/order number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

TIC — Available from the Office of Scientific and Technical Information, Technical Information Center, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from TIC; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE			
A01 ..... $4.50	E01 ..... $6.50	T01 ..... $125.00	
PAPER COPY	E02 ..... 7.50	T02 ..... 140.00	
A02 ..... 7.00	E03 ..... 9.50	T03 ..... 240.00	
A03 ..... 8.50	E04 ..... 11.50	T04 ..... 320.00

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from TIC.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

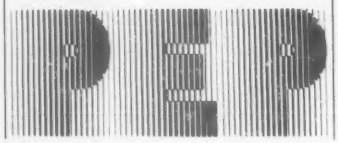
PERSONAL ENERGY PROFILE (PEP)

COMPUTER SEARCH SERVICE



PEP is a customized computer search service provided to DOE and contractor personnel on DOE/RECON (the Department's interactive on-line information retrieval system). For others, these selective dissemination-of-information services are available on commercial on-line systems. PEP automatically supplies the latest information in your field of interest by searching any of the regularly updated data bases in DOE/RECON twice a month, printing out the new bibliographic entries defined by your particular search, and mailing the update to you.

A search strategy is custom designed for each PEP subscriber so that each person's unique information needs are met. Your library and the scientific specialists at the Office of Scientific and Technical Information, Technical Information Center work with you to design a suitable search. Once the PEP service has been established, the search is automatically executed twice a month, and the results—provided in computer printout form—are mailed to you.

To obtain additional information about the specifics of subscribing to the PEP search service, or for examples of PEP search results, contact the library at your facility. If you do not have a library at your facility, contact
